
CONTENTS

Preface *page* ix
How to Use This Book xi
Resources xii

1 Classical Mechanics 1

1.1 Blocks 1
1.1.1 Blocks on Ramps 1
1.1.2 Falling and Hanging Blocks 2
1.1.3 Blocks in Contact 3
1.1.4 Problems: Blocks 3
1.2 Kinematics 5
1.2.1 Circular Motion 5
1.2.2 Problems: Kinematics 6
1.3 Energy 7
1.3.1 Types of Energy 7
1.3.2 Kinetic/Potential Problems 8
1.3.3 Rolling Without Slipping 9
1.3.4 Work–Energy Theorem 11
1.3.5 Problems: Energy 11
1.4 Momentum 12
1.4.1 Linear Collisions 12
1.4.2 Rotational Motion and Angular Momentum 12
1.4.3 Moment of Inertia 14
1.4.4 Center of Mass 15
1.4.5 Problems: Momentum 15
1.5 Lagrangians and Hamiltonians 16
1.5.1 Lagrangians 16
1.5.2 Euler–Lagrange Equations 17
1.5.3 Hamiltonians and Hamilton's Equations of Motion 18
1.5.4 Problems: Lagrangians and Hamiltonians 19
1.6 Orbits 19
1.6.1 Effective Potential 19
1.6.2 Classification of Orbits 20
1.6.3 Kepler's "Laws" 21
1.6.4 Problems: Orbits 22
1.7 Springs and Harmonic Oscillators 22
1.7.1 Normal Modes 23
1.7.2 Damping, Driving, and Resonance 24
1.7.3 Further Examples 25
1.7.4 Problems: Springs 27
1.8 Fluid Mechanics 27
1.8.1 Bernoulli's Principle 27
1.8.2 Buoyant Forces 29
1.8.3 Problems: Fluid Mechanics 29
1.9 Solutions: Classical Mechanics 29

2 Electricity and Magnetism 35

2.1 Electrostatics 35
2.1.1 Maxwell's Equations for Electrostatics 35
2.1.2 Electric Potential 35
2.1.3 Integral Form of Maxwell's Equations 36
2.1.4 Standard Electrostatics Configurations 37
2.1.5 Boundary Conditions 38
2.1.6 Conductors 40
2.1.7 Method of Images 40
2.1.8 Work and Energy in Electrostatics 42
2.1.9 Capacitors 43
2.1.10 Problems: Electrostatics 44
2.2 Magnetostatics 45
2.2.1 Basic Tools 45
2.2.2 Ampère's Law and the Biot–Savart Law 46
2.2.3 Standard Magnetostatics Configurations 46
2.2.4 Boundary Conditions 48
2.2.5 Work and Energy in Magnetostatics 48
2.2.6 Cyclotron Motion 48
2.2.7 Problems: Magnetostatics 49
2.3 Electrodynamics 49
2.3.1 Maxwell's Equations 49
2.3.2 Faraday's Law 50
2.3.3 Inductors 50
2.3.4 Problems: Electrodynamics 51

2.4 Dipoles 52
2.4.1 Electric Dipoles 52
2.4.2 Magnetic Dipoles 52
2.4.3 Multipole Expansion 53
2.4.4 Problems: Dipoles 53
2.5 Matter Effects 53
2.5.1 Polarization 54
2.5.2 Dielectrics 54
2.5.3 Problems: Matter Effects 54
2.6 Electromagnetic Waves 54
2.6.1 Wave Equation and Poynting Vector 54
2.6.2 Radiation 56
2.6.3 Problems: Electromagnetic Waves 56
2.7 Circuits 56
2.7.1 Basic Elements 57
2.7.2 Kirchhoff's Rules 57
2.7.3 Energy in Circuits 57
2.7.4 Standard Circuit Types 58
2.7.5 Problems: Circuits 58
2.8 Solutions: Electricity and Magnetism 59

3

Optics and Waves 63

3.1 Properties of Waves 63
3.1.1 Wave Equation 63
3.1.2 Nomenclature and Complex Notation 63
3.1.3 Dispersion Relations 65
3.1.4 Examples of Waves 65
3.1.5 Index of Refraction 65
3.1.6 Polarization 66
3.2 Interference and Diffraction 67
3.2.1 Double-Slit Interference 67
3.2.2 Single-Slit Diffraction 68
3.2.3 Optical Path Length 68
3.2.4 Thin Films and Phase Shifts 69
3.2.5 Miscellaneous Diffraction 70
3.3 Geometric Optics 70
3.3.1 Reflection and Refraction 70
3.3.2 Lenses and Mirrors 71
3.4 Assorted Extra Topics 72
3.4.1 Rayleigh Scattering 72
3.4.2 Doppler Effect 72
3.4.3 Standing Sound Waves 73
3.5 Problems: Optics and Waves 74
3.6 Solutions: Optics and Waves 75

4

Thermodynamics and Statistical Mechanics 78

4.1 Basic Statistical Mechanics 78
4.1.1 Ensembles and the Partition Function 78
4.1.2 Entropy 79
4.1.3 Classical Limit 80
4.1.4 Equipartition Theorem 80
4.1.5 Some Combinatorial Facts 80
4.2 Thermodynamics 80
4.2.1 Three Laws 81
4.2.2 Gases and Equations of State 82
4.2.3 Types of Processes 82
4.2.4 Relations Between Thermodynamic Variables 84
4.2.5 Heat Capacity 84
4.2.6 Model Systems 85
4.3 Quantum Statistical Mechanics 87
4.4 Problems: Thermodynamics and Statistical Mechanics 88
4.5 Solutions: Thermodynamics and Statistical Mechanics 90

5

Quantum Mechanics and Atomic Physics 92

5.1 Formalism (How To Calculate) 92
5.1.1 Wavefunctions and Operators 92
5.1.2 Dirac Notation 94
5.1.3 Schrödinger Equation 95
5.1.4 Commutators and the Uncertainty Principle 96
5.1.5 Problems: Formalism 98
5.2 Harmonic Oscillator 99
5.2.1 One Dimension 99
5.2.2 Three Dimensions 100
5.2.3 Problems: Harmonic Oscillator 101
5.3 Other Standard Hamiltonians 101
5.3.1 Infinite Square Well 101
5.3.2 Free Particle 102
5.3.3 Delta Function 102
5.3.4 Finite Square Well 103
5.3.5 Scattering States: Reflection and Transmission 103
5.3.6 Problems: Other Standard Hamiltonians 104
5.4 Quantum Mechanics in Three Dimensions 104
5.4.1 Radial Equation and Effective Potential 105
5.4.2 Angular Momentum and Spherical Harmonics 105
5.4.3 The Hydrogen Atom 106
5.4.4 Problems: Quantum Mechanics in Three Dimensions 108
5.5 Spin 108
5.5.1 Spin-1/2 108
5.5.2 Spin and the Wavefunction 109
5.5.3 Adding Spins 110
5.5.4 Bosons and Fermions 111
5.5.5 Problems: Spin 112
5.6 Approximation Methods 113
5.6.1 Time-Independent Perturbation Theory: First and Second Order 113
5.6.2 Variational Principle 114
5.6.3 Adiabatic Theorem 114
5.6.4 Problems: Approximation Methods 114

5.7 Atomic Physics Topics 115
5.7.1 Bohr Model 115
5.7.2 Perturbations to Hydrogen Atoms 115
5.7.3 Shell Model and Electronic Notation 116
5.7.4 Stark and Zeeman Effects 116
5.7.5 Selection Rules 117
5.7.6 Blackbody Radiation 117
5.7.7 Problems: Atomic Physics Topics 118
5.8 Solutions: Quantum Mechanics and Atomic Physics 119

6
Special Relativity 123
6.1 Relativity Basics 123
6.1.1 Simultaneity 124
6.1.2 Time Dilation 124
6.1.3 Lorentz Contraction 124
6.1.4 Velocity Addition 125
6.2 4-Vectors 125
6.2.1 Lorentz Transformation Matrices 125
6.2.2 Relativistic Dot Product 126
6.3 Relativistic Kinematics 127
6.3.1 Conserved vs. Invariant 127
6.3.2 Exploiting the Invariant Dot Product 128
6.4 Miscellaneous Relativity Topics 129
6.4.1 Relativistic Doppler Shift 129
6.4.2 Pythagorean Triples 129
6.5 Relativity: What to Memorize 129
6.6 Problems: Special Relativity 130
6.7 Solutions: Special Relativity 131

7
Laboratory Methods 134
7.1 Graph Reading 134
7.1.1 Dimensional Analysis 134
7.1.2 Log Plots 134
7.2 Statistics 135
7.2.1 Error Analysis 135
7.2.2 Poisson Processes 136
7.3 Electronics 136
7.3.1 AC Behavior of Basic Circuit Elements 136
7.3.2 More Advanced Circuit Elements 138
7.3.3 Logic Gates 138
7.4 Radiation Detection and Instrumentation 139
7.4.1 Interaction of Charged Particles with Matter 139
7.4.2 Photon Interactions 140
7.4.3 General Properties of Particle Detectors 141
7.4.4 Radioactive Decays 141
7.5 Lasers and Interferometers 141
7.5.1 Generic Laser Operation 141
7.5.2 Types of Lasers 142
7.5.3 Interferometers 143
7.6 Problems: Laboratory Methods 143
7.7 Solutions: Laboratory Methods 145

8
Specialized Topics 146
8.1 Nuclear and Particle Physics 146
8.1.1 The Standard Model: Particles and Interactions 146
8.1.2 Nuclear Physics: Bound States 147
8.1.3 Symmetries and Conservation Laws 148
8.1.4 Recent Developments 149
8.2 Condensed Matter Physics 149
8.2.1 Crystal Structure 149
8.2.2 Electron Theory of Metals 150
8.2.3 Semiconductors 151
8.2.4 Superconductors 151
8.3 Astrophysics 152
8.4 Recent Nobel Prizes 153
8.5 Problems: Specialized Topics 155
8.6 Solutions: Specialized Topics 157

9
Special Tips and Tricks for the Physics GRE 159
9.1 Derive, Don't Memorize 159
9.2 Dimensional Analysis 160
9.3 Limiting Cases 161
9.4 Numbers and Estimation 162
9.5 Answer Types (What to Remember in a Formula) 163
9.6 General Test-Taking Strategies 165
9.7 Problems: Tips and Tricks 165
9.8 Solutions: Tips and Tricks 166

Sample Exams and Solutions 167
Sample Exam 1 169
Sample Exam 2 187
Sample Exam 3 209
Answers to Sample Exam 1 227
Answers to Sample Exam 2 228
Answers to Sample Exam 3 229
Solutions to Sample Exam 1 230
Solutions to Sample Exam 2 243
Solutions to Sample Exam 3 254
