PREFACE xiii

I THE SOILS AROUND US I

1.1 Functions of Soils in Our Ecosystem	2
1.2 Medium for Plant Growth	3
1.3 Regulator of Water Supplies	6
1.4 Recycler of Raw Materials	7
1.5 Habitat for Soil Organisms	7
1.6 Engineering Medium	8
1.7 Soil as a Natural Body	9
1.8 The Soil Profile and Its Layers (Horizons)	11
1.9 Topsoil and Subsoil	13
1.10 Soil: The Interface of Air, Minerals, Water, and Life	16
1.11 Mineral (Inorganic) Constituents of Soils	16
1.12 Soil Organic Matter	18
1.13 Soil Water: A Dynamic Solution	20
1.14 Soil Air: A Changing Mixture of Gases	22
1.15 Interaction of Four Components to Supply Plant Nutrients	22
1.16 Nutrient Uptake by Plant Roots	24
1.17 Soil Quality, Degradation, and Resilience	26
1.18 Conclusion	27
Study Questions	27
Reference	28

2 FORMATION OF SOILS FROM PARENT MATERIALS 29

2.1 Weathering of Rocks and Minerals	29
2.2 Physical Weathering (Disintegration)	31
2.3 Chemical Weathering (Decomposition)	33
2.4 Factors Influencing Soil Formation	34
2.5 Parent Materials	35
2.6 Residual Parent Material	35

2.7	Colluvial Debris	36
2.8	Alluvial Stream Deposits	37
2.9	Marine Sediments	38
2.10	Parent Materials Transported by Glacial Ice and Meltwaters	40
2.11	Parent Materials Transported by Wind	42
2.12	Organic Deposits	43
2.13	Climate	45
2.14	Biota: Living Organisms	47
2.15	Topography	50
2.16	Time	51
2.17	Soil Formation in Action	52
2.18	The Soil Profile	55
2.19	Conclusion	57
	Study Questions	58
	References	58
3	SOIL CLASSIFICATION	59
3.1	Concept of Individual Soils	60
3.2	Comprehensive Classification System: <i>Soil Taxonomy</i>	60
3.3	Categories and Nomenclature of <i>Soil Taxonomy</i>	65
3.4	Soil Orders	66
3.5	Entisols (Recent: Little If Any Profile Development)	70
3.6	Inceptisols (Few Diagnostic Features: Inception of B Horizon)	71
3.7	Andisols (Volcanic Ash Soils)	71
3.8	Gelisols (Permafrost and Frost Churning)	72
3.9	Histosols (Organic Soils without Permafrost)	74
3.10	Aridisols (Dry Soils)	75
3.11	Vertisols (Dark, Swelling and Cracking Clays)	77
3.12	Mollisols (Dark, Soft Soils of Grasslands)	79
3.13	Alfisols (Argillic or Natric Horizon, Medium to High Bases)	81
3.14	Ultisols (Argillic Horizon, Low Bases)	82
3.15	Spodosols (Acid, Sandy, Forest Soils, Low Bases)	83
3.16	Oxisols (Oxic Horizon, Highly Weathered)	84
3.17	Lower-Level Categories in <i>Soil Taxonomy</i>	85
3.18	Soil Surveys and Maps	89
3.19	Conclusion	92
	Study Questions	93
	References	94
4	SOIL ARCHITECTURE AND PHYSICAL PROPERTIES	95
4.1	Soil Color	96
4.2	Soil Texture (Size Distribution of Soil Particles)	97
4.3	Soil Textural Classes	100
4.4	Structure of Mineral Soils	104
4.5	Soil Density	106
4.6	Pore Space of Mineral Soils	113
4.7	Formation and Stabilization of Soil Aggregates	115
4.8	Tillage and Structural Management of Soils	121
4.9	Soil Properties Relevant to Engineering Uses	125
4.10	Conclusion	129
	Study Questions	129
	References	130
5	SOIL WATER: CHARACTERISTICS AND BEHAVIOR	131
5.1	Structure and Related Properties of Water	132

5.2	Capillary Fundamentals and Soil Water	134
5.3	Soil Water Energy Concepts	135
5.4	Soil Moisture Content and Soil Water Potential	140
5.5	The Flow of Liquid Water in Soil	143
5.6	Infiltration and Percolation	146
5.7	Water Vapor Movement in Soils	150
5.8	Qualitative Description of Soil Wetness	150
5.9	Conclusion	155
	Study Questions	156
	References	157
6	SOIL AND THE HYDROLOGIC CYCLE	158
6.1	The Global Hydrologic Cycle	159
6.2	Fate of Precipitation and Irrigation Water	160
6.3	The Soil-Plant-Atmosphere Continuum	163
6.4	Efficiency of Water Use	167
6.5	Control of Evapotranspiration (ET)	169
6.6	Control of Surface Evaporation (E)	169
6.7	Percolation-Evaporation Balance	171
6.8	Percolation and Groundwaters	173
6.9	Enhancing Soil Drainage	176
6.10	Septic Tank Drain Fields	181
6.11	Irrigation Principles and Practices	185
6.12	Conclusion	191
	Study Questions	192
	References	192
7	SOIL AERATION AND TEMPERATURE	194
7.1	Soil Aeration	194
7.2	Means of Characterizing Soil Aeration	196
7.3	Oxidation-Reduction (Redox) Potential	197
7.4	Factors Affecting Soil Aeration	200
7.5	Ecological Effects of Soil Aeration	202
7.6	Aeration in Relation to Containerized and Ornamental Plants	204
7.7	Wetlands and Their Poorly Aerated Soils	207
7.8	Processes Affected by Soil Temperature	210
7.9	Absorption and Loss of Solar Energy	214
7.10	Thermal Properties of Soils	217
7.11	Soil Temperature Control	221
7.12	Conclusion	223
	Study Questions	224
	References	224
8	SOIL COLLOIDS: THEIR NATURE AND PRACTICAL SIGNIFICANCE	226
8.1	Properties of Soil Colloids	227
8.2	Adsorbed Cations	229
8.3	Fundamentals of Layer Silicate Clay Structure	230
8.4	Mineralogical Organization of Silicate Clays	232
8.5	Genesis of Soil Colloids	236
8.6	Sources of Charges on Soil Colloids	238
8.7	Cation Exchange	241
8.8	Cation Exchange Capacity	241
8.9	Availability of Exchangeable Cations as Plant Nutrients	245
8.10	Anion Exchange	246

8.11	Soil Colloids and Environmental Quality	248
8.12	Conclusion	249
	Study Questions	250
	References	251
9	SOIL ACIDITY, ALKALINITY, AND SALINITY	252
9.1	Sources of Acidity	253
9.2	Sources of Alkalinity	256
9.3	Buffering of Soils	258
9.4	Variability in Soil pH	260
9.5	Soil Reaction: Correlations	264
9.6	Determination of Soil pH	265
9.7	Methods of Intensifying Soil Acidity	267
9.8	Decreasing Soil Acidity: Liming Materials	268
9.9	Reactions of Lime in the Soil	268
9.10	Lime Requirements: Quantities Needed	269
9.11	Practical Considerations	271
9.12	Ameliorating Acidity in Subsoils	273
9.13	Alkaline and Salt-Affected Soils	273
9.14	Development of Salt-Affected Soils	274
9.15	Measuring Salinity and Alkalinity	275
9.16	Classes of Salt-Affected Soils	276
9.17	Selective Tolerance of Higher Plants to Saline and Sodic Soils	279
9.18	Management of Saline and Sodic Soils	281
9.19	Reclamation of Saline Soils	283
9.20	Reclamation of Saline-Sodic and Sodic Soils	285
9.21	Conclusion	287
	Study Questions	288
	References	288
10	ORGANISMS AND ECOLOGY OF THE SOIL	290
10.1	The Diversity of Organisms in the Soil	290
10.2	Organisms in Action	292
10.3	Organism Abundance, Biomass, and Metabolic Activity	296
10.4	Earthworms and Termites	297
10.5	Soil Microanimals	301
10.6	Roots of Higher Plants	303
10.7	Soil Algae	305
10.8	Soil Fungi	306
10.9	Soil Actinomycetes	310
10.10	Soil Bacteria	312
10.11	Conditions Affecting the Growth of Soil Microorganisms	312
10.12	Beneficial Effects of Soil Organisms	314
10.13	Soil Organisms and Damage to Higher Plants	315
10.14	Ecological Relationships Among Soil Organisms	317
10.15	Conclusion	320
	Study Questions	320
	References	321
11	SOIL ORGANIC MATTER	322
11.1	The Global Carbon Cycle	322
11.2	The Process of Decomposition in Soils	324
11.3	Factors Controlling Rates of Decomposition and Mineralization	328
11.4	Humus: Genesis and Nature	333

11.5	Composts and Composting	335
11.6	Direct Influences of Organic Matter on Plant Growth	338
11.7	Influence of Organic Matter on Soil Properties and the Environment	339
11.8	Management of Amount and Quality of Soil Organic Matter	341
11.9	Carbon Balance in the Soil-Plant-Atmosphere System	343
11.10	Factors and Practices Influencing Soil Organic Matter Levels	344
11.11	Soils and the Greenhouse Effect	349
11.12	Organic Soils (Histosols)	352
11.13	Conclusion	354
	Study Questions	355
	References	355

12 NITROGEN AND SULFUR ECONOMY OF SOILS 357

12.1	Influence of Nitrogen on Plant Growth and Development	358
12.2	Origin and Distribution of Nitrogen	358
12.3	The Nitrogen Cycle	359
12.4	Immobilization and Mineralization	359
12.5	Ammonium Fixation by Clay Minerals	361
12.6	Ammonia Volatilization	361
12.7	Nitrification	362
12.8	The Nitrate Leaching Problem	364
12.9	Gaseous Losses by Denitrification	366
12.10	Biological Nitrogen Fixation	371
12.11	Symbiotic Fixation with Legumes	372
12.12	Symbiotic Fixation with Nonlegumes	375
12.13	Nonsymbiotic Nitrogen Fixation	377
12.14	Addition of Nitrogen to Soil in Precipitation	377
12.15	Reactions of Nitrogen Fertilizers	378
12.16	Practical Management of Soil Nitrogen in Agriculture	378
12.17	Importance of Sulfur	379
12.18	Natural Sources of Sulfur	381
12.19	The Sulfur Cycle	383
12.20	Behavior of Sulfur Compounds in Soils	383
12.21	Sulfur Oxidation and Reduction	385
12.22	Sulfur Retention and Exchange	386
12.23	Sulfur and Soil Fertility Maintenance	387
12.24	Conclusion	389
	Study Questions	389
	References	390

13 SOIL PHOSPHORUS, POTASSIUM, AND MICRONUTRIENTS 391

13.1	Role of Phosphorus in Plant Nutrition and Soil Fertility	392
13.2	Effects of Phosphorus on Environmental Quality	393
13.3	The Phosphorus Cycle	397
13.4	Organic Phosphorus in Soils	400
13.5	Inorganic Phosphorus in Soils	402
13.6	Solubility of Inorganic Phosphorus in Acid Soils	403
13.7	Inorganic Phosphorus Availability at High pH Values	406
13.8	Phosphorus-Fixation Capacity of Soils	406
13.9	Practical Control of Phosphorus Availability	410
13.10	Potassium: Nature and Ecological Roles	411
13.11	Potassium in Plant and Animal Nutrition	411
13.12	The Potassium Cycle	412
13.13	The Potassium Problem in Soil Fertility	415
13.14	Forms and Availability of Potassium in Soils	417

13.15	Factors Affecting Potassium Fixation in Soils	419
13.16	Practical Aspects of Potassium Management	420
13.17	Importance of Micronutrient Elements	421
13.18	Role of the Micronutrients	422
13.19	Source of Micronutrients	422
13.20	Factors Affecting the Availability of Micronutrients	424
13.21	Need for Nutrient Balance	429
13.22	Soil Management and Micronutrient Needs	430
13.23	Conclusion	432
	Study Questions	432
	References	433
14	PRACTICAL NUTRIENT MANAGEMENT	435
14.1	Goals of Nutrient Management	435
14.2	Environmental Quality	438
14.3	Soil-Plant-Atmosphere Nutrient Cycles	441
14.4	Recycling Nutrients through Animal Manures	444
14.5	Storage, Treatment, and Management of Animal Manures	446
14.6	Industrial and Municipal By-Products	448
14.7	Sewage Effluent and Sludge	449
14.8	Practical Utilization of Organic Nutrient Sources	450
14.9	Inorganic Commercial Fertilizers	451
14.10	The Concept of the Limiting Factor	457
14.11	Fertilizer Application Methods	459
14.12	Timing of Fertilizer Application	462
14.13	Diagnostic Tools and Methods	462
14.14	Plant Symptoms and Field Observations	463
14.15	Plant Analysis and Tissue Testing	463
14.16	Soil Analysis	463
14.17	Site-Specific Nutrient Management	468
14.18	Broader Aspects of Fertilizer Practice	469
14.19	Conclusion	470
	Study Questions	471
	References	471
15	SOIL EROSION AND ITS CONTROL	473
15.1	Significance of Soil Erosion and Land Degradation	474
15.2	On-Site and Off-Site Effects of Accelerated Soil Erosion	476
15.3	Mechanics of Water Erosion	480
15.4	Factors Affecting Erosion by Water	482
15.5	Conservation Tillage	489
15.6	Control of Accelerated Erosion on Range and Forest Land	493
15.7	Erosion and Sediment Control on Construction Sites	495
15.8	Wind Erosion and Its Control	499
15.9	Land Capability Classification as a Guide to Conservation	503
15.10	Progress in Soil Conservation	506
15.11	Conclusion	507
