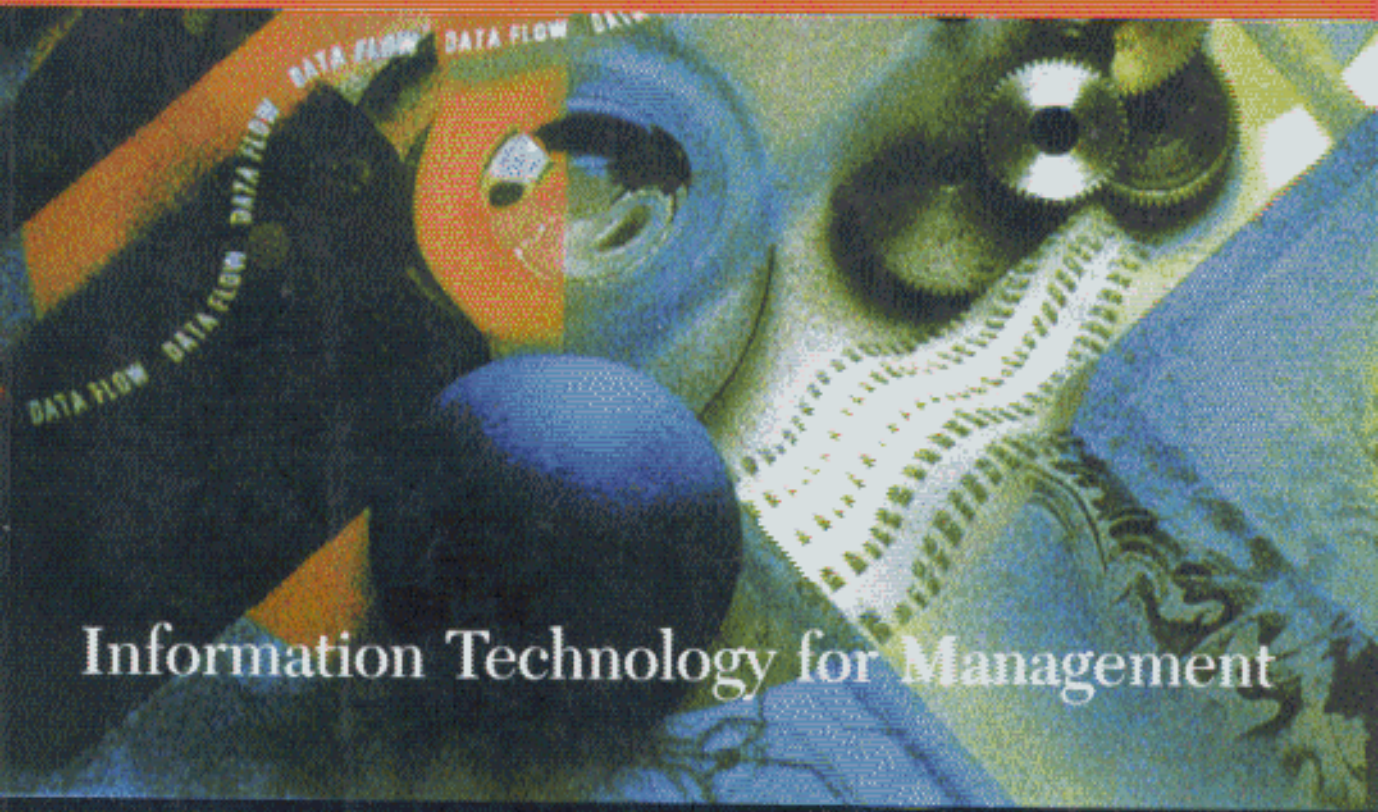
INTERNATIONAL EDITION



Information Technology for Management

7th Edition

Technology
31051000577953

Henry C. Lucas, Jr.

CONTENTS

Preface v

Acknowledgments xiii

PART ONE

The Role of Managers in Information Technology

1. USING TECHNOLOGY TO TRANSFORM THE ORGANIZATION 5

The Senior Manager 6

Information Technology in the Workplace 6

A Visit to Brun Passot in France 10

What Is Information Technology? 11

Transforming Organizations 13

Information Technology and the Manager 15

The Challenge of Change 16

Six Major Trends 17

A Preview of the Book 19

2. INTERPRETING AND UNDERSTANDING INFORMATION 25

The Nature of Information 26

What Is Information? 26

How People Interpret Information 26

A Model for Interpreting Information 28

Characteristics of Information 30

From Information to Knowledge 31

The Decision-Making Process 34

Problem Finding and Solving 34

Types of Decisions 34

How Do Individuals Make Decisions? 35

Stages in the Decision-Making Process 35

The Influence of the Organization 38

A Scenario for the Not-Too-Distant Future 39

3. INFORMATION TECHNOLOGY IN PERSPECTIVE 46
Frameworks for Information Technology 47
Decision-Oriented Frameworks 47
A Synthesized Framework 48
Adding Organizations and Decisions to a Framework 49
A Framework Based on IT 51
Changing Technology and Applications 51
Processing Transactions 51
Decision Support, Executive IS, and Expert Systems 52
Knowledge Work Support 52
Supporting Groups and Cooperative Work-Groupware 52
Interorganizational Systems 53
Key Technologies: Communications, Networking, and Database 53
A More Contemporary Framework 53
The Basics of Information Systems 55
Some Generic Types of Systems 55
Using Different Types of Technology 55
Is There Value in IT? 57
Investment Opportunities Matrix 58
What Is Value? 65
The Case of Chrysler 66

PART TWO

Organizational Issues

4. THE IMPACT OF INFORMATION TECHNOLOGY ON THE ORGANIZATION 75
Modern Organizations 76
Organizational Structure and Design 76
What Is Organizational Flexibility? 78
Impact on Flexibility 79
Information Technology Runs the Airline 79
Co-opting the Travel Agent 81
Technology Transforms the Securities Industry 82
Natural Growth Generates an Impact 83
Conclusions 83
Creating New Types of Organizations 84
Examples of Designs Using IT Variables 86
Adding People to the Design 91
Building a T-Form Organization 94
People in the T-Form 94
Other Design Possibilities 94
Adopting the T-Form: An Example 96

5. STRATEGIC ISSUES OF INFORMATION TECHNOLOGY 104
Information Technology and Corporate Strategy 105
Some Examples of Technology and Strategy 106
The Value Chain 107
Some Generic Strategies 108
A Framework for the Strategic Use of IT 109
Capitalizing on Information Technology 111
Creating and Sustaining a Competitive Edge 112
Using Resources to Advantage 112
Protecting an IT Innovation 113
An Example of Technology for Competitive Advantage 114
Integrating Technology with the Business Environment 116
Managing Information Technology 118
A Vision of the Organization and Technology 119
Technology for Structuring the Organization 119
Integrating Technology and Decision Making 120
A Corporate Plan for Strategy 120
Alliances and Partnerships 121

New IT Initiatives 122
The IT Infrastructure 122
Ongoing Management of IT 123

6. INTERNATIONAL BUSINESS AND INFORMATION TECHNOLOGY 127
The Impact of Globalization on Business 128
International Business Strategies 129
Multinational 130
Global 130
International 130
Transnational 130
Key Issues in an International Environment 130
Information Needs 130
Implementing International IT 131
Managing Information Technology Internationally 134
Concentrate on Interorganizational Linkages 135
Establish Global Systems Development Skills 135
Build an Infrastructure 135
Take Advantage of Liberalized Electronic Communications 136
Strive for Uniform Data 136
Develop Guidelines for Shared versus Local Systems 137
Three Examples 138
Standard Pharmaceuticals International 138
Asea Brown Boveri 139
VeriFone 140
Transnational Virtual Firms and IT 144
Business Models and IT Management 145
Independent Operations 145
Headquarters Driven 146
Intellectual Synergy 147
Integrated Global IT 147
The Internet, Imperialism, and Developing Countries 149

PART THREE

Information Technology

7. THE FUNDAMENTALS 157
The Components of a Personal Computer 158
Primary Memory or RAM 160
The Arithmetic Basis of Computers 160
How Memory Is Organized 162
Memory Technology 163
The Central Processing Unit 164
Doing Arithmetic 165
How Does the CPU Work? 165
An Instruction Set 167
CISC versus RISC 167
What Makes a Chip Perform? 169
What Techniques Increase Speed? 171
Input and Output 172
Input-Only Devices 173
Output Devices 176
Reducing a Bottleneck 177

8. A PROLIFERATION OF COMPUTERS 182
Implications for Managers 183
The Computers of Today 183
The Rise of the Mainframe 184
Powerful Supercomputers 187
Minis: The Beginning of the Revolution 188
The Personal Computer Has Changed Everything 188
The Server 189
The Network PC versus the Under $1000 PC 189
Massively Parallel Computers 190
A Personal Assistant 190
Conclusions 191
Why So Many Types of Computers? 192

9. SOFTWARE IS THE KEY 196
Managerial Concerns 197
Programming Languages 198

The Contribution of Higher-Level Languages 200
An Example of a Special-Purpose Language 210
Fourth-Generation Languages Ease Programming 210
Package Programs Are Another Alternative 212
The Web Browser and Internet Standards 214
The Operating System 215
Early Systems 215
The Next Steps 219
Evolutionary Advances 220
Operating Systems for Personal Computers 221

10. DATABASE MANAGEMENT 228
File Elements 229
Data 229
Direct-Access Files 230
Storage Media 230
Finding Data on the File 232
More Complex Access 232
Enter Database Management Software 234
Benefits of the Relational Model 235
An Example 236
Normalization 238
Object-Oriented Databases 240
Databases in Systems Design 241
Data Modeling 241
The Role of the Database Administrator 244
DBMSs in Building Systems 244
Oracle: An Enterprise DBMS 245
Distributed Databases 246
The Data Warehouse 246
Data Mining 249
Changing Database Markets 250

11. COMMUNICATIONS 258
Communications between Computers 260
Codes 260
Transmission Modes 261
Direction of Transmission 261
How Are Signals Represented? 262
Speed of Transmission 264
What Is a Protocol? 265
Summary 266
Networks 266
Network Configurations 268
Local Area Networks 269
TCP/IP: A Network Protocol 271
Going Wireless 272
Voice Considerations 274
The Advantages of Networks for Business 274
What Are the Alternatives for Wide Area Communications? 275
Why Develop Private Networks? 279
Worries about Network Security 280
The Contribution of Communications 281
Electronic Mail As a Communications Tool 281
Electronic Data Interchange 282
Beyond the Model T 283
Building an Electronic Market 285
Transforming Organizations and the Economy 285

12. NETWORKS AND ELECTRONIC COMMERCE 294
The Impact of Communications Technology 296
Building Networks 296
Commercial Network Providers 298
A National Network Infrastructure: The Minitel System 299
Internet: A Case of Phenomenal Growth 302
Intranets and Extranets 309
The Potential of Electronic Commerce 311
The Nature of Markets 315
New Business Models 321

13. INFORMATION TECHNOLOGY ARCHITECTURES 328
What Is Hardware and Software Architecture? 329
Mainframes for High Volume 330
The Midrange Computer Is (Usually) Smaller 332
The PC Is Totally Different 332
How Do You Share? 334
Power to the Desktop with a Friendly Interface 335
Moving toward the Client-Server Model 335
What Is Infrastructure? 337
The Advantages and Disadvantages of Standards 338
Examples of Different Architectures 338
Competitive Reservation Systems 338
Travelocity: Interfacing a CRS to the Web 340
A Broker Workstation 342
Chevron Canada Client-Server Model 344
Comparing the Applications 344
Matching Design to an Architecture 346
When the Architecture Is a Given 346
Suggested Guidelines 347
Dealing with the Problem of Data 348
Contemporary Trends in Architecture 348

14. SYSTEM ALTERNATIVES AND ACQUISITION 353
The Industry 354
To Buy or Not: Major Applications 355
The Decision Context 355
Processing 357
The Services Industry 358
What Sources Should Be Selected? 359
Hardware 359
Software 361
The Pros and Cons of Outsourcing 362
Strategies for Acquiring Equipment and Services 363
Evaluating Performance 364
Acquiring Computers 364
Dealing with Obsolescence 366
Dedicated Applications Packages 366
Establishing Criteria 368
Making a Final Decision 369
Enterprise Software Packages 370
Packages for PCs 370
An Example 371

PART FOUR

Systems Analysis and Design

15. BUILDING SYSTEMS: CREATIVITY WITH TECHNOLOGY 379
The Design Task 380
What Is a System? 380
Multiuser versus Single-User Design 383
A Systems Design Life Cycle 383
The Roles of Managers, Users, and Designers 387
Potential Pitfalls in the Life Cycle 390
User-Oriented Design 391
Problems with the Conventional View 391
Design Team 392
The Spiral Model of Development 392
Data Collection for Analysis and Design 394
Observation 394
Interviews 394
Questionnaires 394
Comparing the Alternatives 395
Structured versus Object-Oriented Design 395
The Role of Structured Design 396
Data Flow Diagrams 396
An Example of Structured Design 397
Object-Oriented Design 401
A Comparison of Approaches 406

16. BUILDING SYSTEMS: FURTHER DEVELOPMENTS 412
Systems Analysis 413

Survey and Feasibility Study 416
Costs and Benefits of New Systems 416
Identifying Systems Alternatives 418
Organizational Impact 419
Technological Feasibility 419
Contents and Format for a Study 420
Determining Feasibility 420
Selection Committee 420
Selecting an Alternative 421
Undertaking Systems Analysis 423
Undertaking Systems Design 423
Results of the Design Process 423
General Design Considerations 424
Client-Server Design 425
Graphical User Interfaces 425
Designing Web Sites 426
The Input Bottleneck 428
Handling Errors 429
Backup 430
Computer-Aided Software Engineering 430
Upper CASE 431
Lower CASE 431
Is Rapid Application Development a Solution? 432
What Is Conversion Effectiveness? 433

APPENDIX A DESIGNING A DISTRIBUTED CLIENT-SERVER SYSTEM: THE HARDSERVE CASE STUDY 441
Goals 441
The Existing System 442
Problems 442
Decision Considerations 442
Information Flows 442
A Distributed System 442
Systems Design 442
System Specifications 446
Systems Overview: The Local Store 446
Sales 447
Inventory Control 448
Connecting to the Warehouse 450
Inquiries 451
Systems Overview: The Warehouse 451
Filling Orders 452
Purchasing 454
Other Processes 455
The Database 455
Input and Output 458
Summary 458

APPENDIX B AN OBJECT-ORIENTED EXAMPLE 460
Objects and Classes 460
Creating Subsystems 466
Observations 469

17. ENHANCING THE LIFE CYCLE: PACKAGES AND OTHER NONTRADITIONAL TECHNIQUES 470
For Whom Are These Approaches Intended? 471
High-Level Design Tools 472
General Packages 473
Dedicated Packages 474
Advantages of Packages 474
Disadvantages of Packages 475
Package Design 476
A Classification Framework for Packages 477
An Example of a Package 480
Acquiring Packages 481
Implementing Packages 482
Conclusions 484
Prototyping 484
How to Develop a Prototype 485
An Example 487
A Range of Alternatives 488

18. REENGINEERING: CHANGING BUSINESSES AND BUSINESS PROCESSES 493
What Is Reengineering? 494
What Is a Process? 496

Reengineering a Process at Mutual Benefit Life 497
Reengineering a Process at Merrill Lynch 498
The Old System 499
A New System 503
Evaluation 507
Reengineering the Entire Firm at Oticon 508
Reengineering the Entire Firm at Lithonia Lighting 512
Implications 514
Reengineering: Success or Failure? 515

19. IMPLEMENTING CHANGE 518
Implementation 520
What Is Implementation? 520
Success or Failure 521
Research on Implementation 522
A Model of Implementation 523
The Implementation Process 525
An Implementation Strategy 526
The Role of Design Teams 527
An Implementation Framework 527
Some Examples 530
Emergent Change 532
Implementing IT-Based Transformation of the Organization 533
Analyzing the Costs and Benefits of Change 535
Motivating Organizational Change 537
A Change Program 538
Beyond Structural Change 541

PART FIVE

Exciting Directions in Systems

20. SUPPORTING KNOWLEDGE WORKERS 549
The Range of User Activities 550
Will Knowledge Workers Design the Entire System? 552
Supporting Knowledge Workers 553
The Data Warehouse 553
Policy Issues for Management 553
Support 553
Making Mistakes 554
Standards 555
Data Access 555
Is Computing the Right Use of Time? 555
Benefits from Encouraging Knowledge Workers 556

21. ORGANIZATION SUPPORT SYSTEMS: DSSs, GDSSs, EISs, GROUPWARE, AND MULTIMEDIA 559
Decision-Support Systems 560
DSS Design 560
Examples of DSSs 562
Yield Management: How to Overbook Gracefully 562
Distributing the Gas at APC 566
The Promise of DSSs 568
Executive Information Systems 568
Group Decision-Support Systems 570
Technology-Assisted Meetings 571
Groupware and Organizational Knowledge 572
What Are the Options? 580
Multimedia for Business, Education, and Entertainment 582
What Is Digital Convergence? 586
Hypertext: The Engine for Multimedia? 588

22. INTELLIGENT SYSTEMS 594
Artificial Intelligence 595
AI versus Traditional Programs 595
Expert Systems: Applied AI 595
Components of Expert Systems 597
Knowledge Representation 597
The Inference Engine 597
Systems Development 598
Four Examples 600

Knowledge Discovery 614
Neural Networks 614
Case-Based Reasoning 617
Genetic Algorithms 618
Intelligent Agents 620

PART SIX

Issues for Senior Management

23. MANAGEMENT CONTROL OF INFORMATION TECHNOLOGY 629
Management Control 630
Control Theory 630
Control in the Organization 631
Failure of Control 633
Information and Control 633
Control of Systems Development 635
Control of Operations 637
Control and Electronic Commerce 640
Auditing Information Systems 641
Management Issues 642
Security Issues: Viruses, Worms, and Other Creatures 642

24. INFORMATION TECHNOLOGY ISSUES FOR MANAGEMENT 650
Management in a Technological Environment 651
What Do CEOs Think? 651
A Political Model of Information Technology 651
The Chief Information Officer 653
The Corporate IS Department 655
A Vision and Plan for IT 656
Outsourcing as a Strategy 659
How Much to Invest in IT 662
Estimating Value 662
Making the Investment Decision 665
A Summary of Issues in Managing IT 669
The Changing World of Information 669
Action Plan 670
Use IT Design Variables to Structure the Organization 671
Determine and Communicate Corporate Strategy 671

25. SOCIETAL IMPLICATIONS AND THE FUTURE WITH TECHNOLOGY 675
Social Responsibilities 676
Technology 676
Applications of IT 679
The Impact of IT 681
Some Suggested Solutions 687
Ethics and Information Technology 691
The Future with Information Technology 693
Change Revisited 693

Glossary 700

Bibliography 713

Sources for Applications Briefs 719

Index 721
