Foreword	xvii
PART 1: BASICS OF CP VIOLATION	1
1 Prologue	1
2 Prelude: C, P and T in classical dynamics	10
2.1 Classical mechanics	10
2.1.1 Parity	11
2.1.2 Time reversal	12
2.2 Electrodynamics	14
2.2.1 Charge conjugation	14
2.2.2 Parity	14
2.2.3 Time reversal	15
2.3 Résumé	16
Problems	16
3 C, P and T in non-relativistic quantum mechanics	18
3.1 Parity	19
3.2 Charge conjugation	21
3.3 Time reversal	22
3.4 Kramers' degeneracy	26
3.5 Detailed balance	28
3.6 Electric dipole moments	29
3.6.1 The neutron EDM	29
3.6.2 Atomic EDM	31
3.6.3 Schiff's theorem	32
3.7 Résumé	33
Problems	34
4 C, P and T in relativistic quantum theories	36
4.1 Notation	37
4.2 Spin-1 fields	38
4.3 Spin-0 fields	40
4.3.1 Parity	40
4.3.2 Charge conjugation	41
4.3.3 Time reversal	41

4.4	Spin- $\frac{1}{2}$ fields	42
4.4.1	Parity	43
4.4.2	Charge conjugation	44
4.4.3	Time reversal	46
4.5	CP and CPT transformations	47
4.6	Some consequences of the CPT theorem	49
4.7	▲ Back to first quantization ▲	51
4.8	▲ Phases and phase conventions for C and P ▲	52
4.9	▲ Internal symmetries ▲	53
4.10	The role of final state interactions	55
4.10.1	T invariance and Watson's theorem	55
4.10.2	T-odd correlations and the impact of final state interactions	57
4.10.3	Final state interaction and partial widths	58
4.11	Résumé and outlook	59
	Problems	59
5	The arrival of strange particles	62
5.1	The discovery of strange particles	62
5.2	The $\theta - \tau$ puzzle	64
5.3	The existence of two different neutral kaons	64
5.4	CP-invariant particle-antiparticle oscillations	66
5.5	Regeneration – which is heavier: K_L or K_S ?	70
5.6	The quiet before the storm	71
5.7	The discovery of CP violation	72
	Problems	76
6	Quantum mechanics of neutral particles	77
6.1	The effective Hamiltonian	77
6.2	Constraints from CPT, CP and T	79
6.3	Spherical coordinates	80
6.4	▲ On phase conventions ▲	82
6.5	ΔM and $\Delta \Gamma$	84
6.6	Time evolution	85
6.7	CP violation	86
6.8	On the sign of the CP asymmetry	89
6.9	What happens if you don't observe the decay time?	90
6.10	Regeneration	91
6.11	The Bell-Steinberger inequality	92
6.12	Résumé on $P^0 - \bar{P}^0$ oscillations	93
	Problems	95
7	CP phenomenology of strange decays	97
7.1	The landscape	97
7.1.1	Existence	97
7.1.2	Difference in integrated rates	97
7.1.3	Direct test of T invariance	97

7.1.4	Decay rate evolution	98
7.1.5	Direct CP violation	99
7.1.6	T odd correlations	100
7.2	Semileptonic decays	100
7.3	Non-leptonic K_L decays	101
7.3.1	Decay amplitudes	101
7.3.2	Constraints on A_I and $\bar{A}_I$	104
7.4	Relating ϵ to $M - \frac{i}{2}\Gamma$	105
7.4.1	The phase of ϵ	106
7.5	What do we know about T?	108
7.6	Transverse polarization in $K \rightarrow \pi \mu \nu$ decays	108
7.6.1	The final state interactions mimicing the effect of T violation	108
7.6.2	Real T violation	109
7.7	♣ $K \rightarrow 3\pi$ ♣	111
7.7.1	$K_S \rightarrow 3\pi^0$	111
7.7.2	$K_S \rightarrow \pi^+ \pi^- \pi^0$	111
7.7.3	$K^\pm \rightarrow \pi^\pm \pi^+ \pi^-$	115
7.8	Hyperon decays	116
	Problems	117

PART 2: THEORY OF CP VIOLATION 119

8	The KM implementation of CP violation	119
8.1	A bit of history	119
8.2	The Standard Model	121
8.2.1	QCD	121
8.2.2	The Glashow-Salam-Weinberg model	123
8.3	The KM ansatz	124
8.3.1	The mass matrices	124
8.3.2	Parameters of consequence	125
8.3.3	Describing weak phases through unitarity triangles	127
8.4	The pundits' judgement	128
	Problems	129
9	The theory of $K_L \rightarrow \pi\pi$ decays	131
9.1	The low-energy $\Delta S = 1$ non-leptonic Lagrangian	131
9.2	Evaluating matrix elements	135
9.3	Chiral symmetry and vacuum saturation approximation	136
9.4	$K \rightarrow \pi\pi$ decays	137
9.5	ϵ'/ϵ	138
9.5.1	Determination of matrix elements from data	139
9.5.2	Numerical estimates	140
9.6	$\Delta S = 2$ amplitudes	142
9.6.1	ΔM_K	144
9.6.2	ϵ	145
9.7	♣ Estimating $\text{Im } \Gamma_{12}$ ♣	145

9.8	SM expectations for $\langle P_{\perp} \rangle$ in K_{l3} decays	147
9.9	Hyperon decays	148
9.10	Résumé	149
	Problems	150
10	Fundamentals of B physics	152
10.1	The emerging beauty of B hadrons	152
10.1.1	The discovery of beauty	152
10.1.2	The longevity of B mesons	154
10.1.3	The fluctuating identity of neutral B mesons	156
10.2	Theoretical tool kit	159
10.2.1	The KM paradigm of huge CP asymmetries	159
10.2.2	The unitarity triangle	161
10.2.3	$\Delta B = 2$ transitions	162
10.2.4	Calculating ΔM_B	163
10.2.5	On the sign of ΔM_B	164
10.2.6	The search for physics beyond the SM	165
10.2.7	Calculating $\Delta \Gamma_{B^0}$	167
10.3	The quest for the ultimate prize – CP violation in B decays	168
10.4	From sweatshops to beauty factories	171
10.5	Snatching victory from the jaws of defeat – the ‘unreasonable’ success of the CKM description	173
	Problems	175
11	Basics of the CP phenomenology in B decays	179
11.1	The six paths to CP violation in B decays	179
11.1.1	Class (i)	180
11.1.2	Class (ii)	181
11.1.3	Class (iii)	181
11.1.4	Class (iv)	181
11.1.5	Class (v)	182
11.1.6	Class (vi)	182
11.1.7	Summary	183
11.2	Master equations	183
11.3	Case A: flavour-specific decays with oscillations	185
11.4	Case B: decays to CP eigenstates with oscillations	188
11.4.1	$B_d \rightarrow \psi K_S$	190
11.4.2	$B_d \rightarrow \pi^+ \pi^-$	192
11.4.3	$B_s \rightarrow K_S \rho^0$	194
11.4.4	Seeking New Physics: $B_s \rightarrow \psi \phi, \psi \eta, D_s^+ D_s^-$	194
11.5	♣ Case C: other flavour-nonspecific modes with oscillations ♣	196
11.5.1	$B_s \rightarrow D_s^{\pm} K^{\mp}$	196
11.6	Case D: no $B - \bar{B}$ oscillations	198
11.6.1	$B^{\pm} \rightarrow K^{\pm} \pi^0$	198
11.6.2	$B^- \rightarrow D^{\text{neut}} + K^-$	199

11.7	Résumé	200
	Problems	201
12	♣ The nitty-gritty of B physics ♣	203
12.1	Pollution from water fowls and others	204
12.1.1	How big are penguins?	205
12.1.2	$B_d \rightarrow \psi K_S$	206
12.1.3	$B_d \rightarrow \pi\pi$	207
12.1.4	$B_s \rightarrow K_S \rho^0$	208
12.2	Overcoming pollution	208
12.2.1	$B \rightarrow \pi\pi$	209
12.2.2	$B \rightarrow \pi\rho$	210
12.2.3	$B^0 \rightarrow \psi K_S^*$	210
12.3	The ϕ_3 saga	212
12.3.1	$B^\pm \rightarrow D^{\text{neut}} K^\pm$, revisited	212
12.3.2	Using doubly Cabibbo suppressed decays	213
12.3.3	$B \rightarrow K\pi$	214
12.4	Time-averaged B_s transitions	215
12.5	(Semi-)inclusive decays	216
12.6	Measuring the same angle more than once	217
12.7	Impact of the first CP asymmetry in B decays	217
12.7.1	Indirect manifestations of New Physics	218
12.7.2	New Physics without new weak phases	219
12.7.3	New Physics with new weak phases	219
12.8	Résumé	220
	Problems	220
13	Rare K and B decays – almost perfect laboratories	222
13.1	Rare K decays	222
13.1.1	$K_L \rightarrow \mu^+ \mu^-$ and $K^+ \rightarrow \pi^+ e^+ e^-$	222
13.1.2	$K_L \rightarrow \pi^0 l^+ l^-$	223
13.1.3	$K \rightarrow \pi \nu \bar{\nu}$	224
13.1.4	$K \rightarrow \pi \pi \gamma^{(*)}$	227
13.2	Beauty decays	230
13.2.1	$B \rightarrow X_s \gamma$	230
13.2.2	$B \rightarrow \mu^+ \mu^-$	231
13.2.3	$B \rightarrow X + \nu \bar{\nu}$	231
13.2.4	$B \rightarrow X_s + \mu^+ \mu^-$	232
13.3	Résumé	233
	Problems	233
14	♣ CPT invariance in K and B decays ♣	235
14.1	Equality of masses and lifetimes	236
14.2	Theoretical scenarios	237
14.3	CPT phenomenology for neutral kaons	238
14.3.1	Semileptonic decays	238
14.3.2	Nonleptonic K^{neut} decays	243

14.4	Harnessing EPR correlations	245
14.4.1	ϕ factory	247
14.4.2	Tests of CPT symmetry in B decays	248
14.5	The moralist's view	249
	Problems	250
15	♠CP violation in other heavy systems♠	252
15.1	The decays of charm hadrons	252
15.1.1	CP violation involving $D^0 - \bar{D}^0$ oscillations	253
15.1.2	Direct CP violation	255
15.1.3	KM predictions on asymmetries involving $D^0 - \bar{D}^0$ oscillations	257
15.1.4	KM prediction – direct CP violation	257
15.1.5	Manifestations of New Physics	259
15.2	Production and decay of top quarks	260
15.2.1	$\sigma(t_L \bar{t}_L)$ vs $\sigma(t_R \bar{t}_R)$	260
15.2.2	Final state distributions in $e^+e^- \rightarrow t\bar{t}H^0$	261
15.3	τ physics	262
15.4	Résumé and call to task	266
	Problems	266

PART 3: LOOKING BEYOND THE STANDARD MODEL

16	The strong CP problem	269
16.1	The problem	269
16.2	QCD and quark masses	269
16.2.1	Strong CP violation	271
16.2.2	The neutron electric dipole moment	272
16.3	Are there escape hatches?	274
16.4	Peccei–Quinn symmetry	274
16.5	The dawn of axions – and their dusk?	277
16.5.1	Visible axions	278
16.5.2	Invisible axions	280
16.6	Soft CP violation	281
16.7	The pundits' judgement	283
	Problems	283
17	Setting the table for CP violation in the neutrino sector	285
17.1	Basics of neutrino oscillations	286
17.2	Experiments	286
17.2.1	Solar neutrinos	286
17.2.2	Atmospheric neutrinos	288
17.2.3	Summary of experimental findings	289
17.3	Neutrino masses	289

17.4	Phases in the MNS matrix	292
17.5	CP and T violation in ν oscillations	293
17.6	The MSW effect	295
17.7	The Bard's song	297
	Problems	298
18	First alternative to the KM ansatz: left-right symmetric models	299
18.1	Basics of left-right symmetric theories	299
18.2	The existing phenomenology	302
18.2.1	$\Delta S = 2$ transitions	303
18.2.2	$\Delta S = 1$ transitions	305
18.2.3	Final state asymmetries in hyperon decays	307
18.2.4	Muon transverse polarization in $K_{\mu 3}$ decays	308
18.3	Electric dipole moments	308
18.4	Prospects for CP asymmetries in beauty decays	309
18.5	The pundits' résumé	310
	Problems	310
19	CP violation from Higgs dynamics	312
19.1	A simple example	313
19.2	Sources of CP violation and the question of natural flavour conservation (NFC)	313
19.2.1	Models with FCNC	314
19.2.2	Models without FCNC	318
19.3	CP phenomenology with heavy fermions	325
19.3.1	Models with FCNC	325
19.3.2	Models without FCNC	327
19.4	The pundits' résumé	328
	Problems	329
20	Providing shelter for Higgs dynamics – CP violation from supersymmetry	331
20.1	The virtues of SUSY	331
20.2	Low-energy SUSY	333
20.2.1	The MSSM	334
20.2.2	Non-minimal SUSY models	338
20.3	Gateways for CP violation	338
20.3.1	A first glance at CP phases in MSSM	338
20.3.2	Squark mass matrices	339
20.3.3	Beyond MSSM	341
20.4	Confronting experiments	342
20.4.1	Electric dipole moments	342
20.4.2	The $K^0 - \bar{K}^0$ mass matrix	344
20.4.3	$B^0 - \bar{B}^0$ oscillations and CP violation	344
20.4.4	$b \rightarrow s\gamma$ (and other one-loop decays)	345
20.4.5	Direct CP violation in $\Delta S = 1$ decays	346

20.5	The pundits' résumé	346
	Problems	347
21	Baryogenesis in the universe	
21.1	The challenge	349
21.2	The ingredients	349
21.3	GUT baryogenesis	350
21.4	Electroweak baryogenesis	351
21.5	Leptogenesis driving baryogenesis	353
21.6	Wisdom – conventional and otherwise	355
		356
	PART 4: SUMMARY	
		359
22	Summary and perspectives	
22.1	The cathedral builder's paradigm	359
22.1.1	Present status and general expectations	360
22.1.2	A look back	361
22.2	Agenda for the future	362
22.3	Final words	363
		364
