

Groundwater Hydraulics and Pollutant Transport

Randall J. Charbeneau

Contents

Preface

Chapter One

Introduction to Groundwater Hydrology 1

- 1.1 Porous Media 2
 - 1.2 Distribution of Subsurface Water 5
 - 1.3 Porosity and Related Properties of Soils 7
 - 1.4 Subsurface Hydrologic Cycle 12
 - 1.5 Hydrogeologic Formations 14
 - Problems 16
-

Chapter Two

Darcy's Law and Continuity Relations 18

- 2.1 Principles from Fluid Mechanics 18
 - 2.2 Darcy's Law 24
 - 2.2.1 Hydraulic Head and Gradient 27
 - 2.2.2 Factors that Influence K 31
 - 2.2.3 Heterogeneity and Anisotropy 32
 - 2.2.4 Fractured Media 42
 - 2.2.5 Limitations of to the Validity of Darcy's Law 44
 - 2.2.6 Laboratory Measurement 47
 - 2.3 Continuity Relations for Flow in Porous Media 48
 - 2.3.1 Unconfined Aquifers 48
 - 2.3.2 Storage in Confined Aquifers 57
 - 2.3.3 General Continuity Equations 61
 - 2.3.4 Continuity with a Change in Total Stress 63
 - 2.4 Flow of Air through Porous Media 67
 - 2.5 Groundwater Management Models 72
 - Problems 88
-

Chapter Three

Groundwater and Well Hydraulics 91

- 3.1 Wells and Their Placement 92
- 3.2 Steady Flow to a Well 93
 - 3.2.1 Confined Aquifers 94
 - 3.2.2 Unconfined Aquifers 97

	3.2.3	Leaky Aquifers	98
	3.2.4	Image Well Theory	100
3.3		Transient Flow to a Well in an Ideal Confined Aquifer	105
	3.3.1	Assumptions for Ideal Flow to a Well	106
	3.3.2	Theis Equation	106
	3.3.3	Jacob Approximation	108
	3.3.4	Radius of Influence	109
	3.3.5	Superposition with Transient Flow	111
	3.3.6	Image Well Theory	114
3.4		Pumping Tests	115
	3.4.1	Aquifer Tests	115
	3.4.2	Theis Method	116
	3.4.3	Jacob Method	121
	3.4.4	Recovery Tests	122
	3.4.5	Multiple Observation Wells	123
	3.4.6	Identification of Boundaries	124
3.5		Other Well Functions	125
	3.5.1	Leaky Aquifer with No Storage in Aquitard	126
	3.5.2	Effect of Well Storage	128
	3.5.3	Unconfined Aquifers	131
	3.5.4	Partially Penetrating Wells	138
3.6		Slug Tests	140
3.7		Well Tests	150
3.8		Multiple Well Problems	154
	3.8.1	Circular Dewatering System	155
	3.8.2	Linear Flow System	156
3.9		Potential Flow for Stratified Aquifers	159
3.10		The Interface in the Coastal Aquifer	162
	3.10.1	Law of Ghyben and Herzberg	163
	3.10.2	Application of Dupuit-Forchheimer Theory	164
	3.10.3	General Nonuniform Density Flows	166
3.11		Other Transient Flow Problems	167
	3.11.1	Bank Storage Along Rivers	168
	3.11.2	Wave Propagation in Aquifers	169
		Problems	170

Chapter Four

The Vadose Zone and Groundwater Recharge 179

4.1	Soil Water in the Vadose Zone	181	
4.2	Soil Water Characteristic Curve	186	
4.3	Darcy's Law and Richards' Equation	188	
4.4	Measurement of Soil Properties	192	
	4.4.1	Measurement of Soil Water Content and Capillary Pressure Head	192
	4.4.2	Soil Water Characteristic Curve	195

	4.4.3	Hydraulic Conductivity	201
	4.4.4	Field Monitoring	206
4.5		Infiltration Models	206
4.6		Redistribution of Soil Water	218
	4.6.1	Rectangular Profile Model	219
	4.6.2	Kinematic Model	222
4.7		Evaporation and Desorption Models	229
	4.7.1	Absorption/Desorption Models for Capillary Flow	231
	4.7.2	Application to Evaporation Modeling	232
4.8		Evaporation from a Shallow Water Table	236
4.9		Water Balance and Groundwater Recharge	239
		Problems	246

Chapter Five

Groundwater Contamination 247

5.1		Sources of Subsurface Contamination	247
5.2		Mass Transport Processes	260
5.3		General Continuity Equation	263
5.4		Solute Partitioning	265
5.5		Degradation Losses of Soil and Groundwater Contaminants	282
5.6		Simplified Forms of the Continuity Equation	289
		Problems	291

Chapter Six

Solute Transport by Advection 293

6.1		Advective Transport	292
6.2		Introduction to Potential Theory	295
	6.2.1	Potential Functions	295
	6.2.2	The Stream Function	297
	6.2.3	Travel Time along Streamlines	300
6.3		Calculation of Potential and Stream Functions	303
6.4		Applications of Potential Theory	310
	6.4.1	Capture Zone of Production Wells	310
	6.4.2	Flow between an Injection/Production Well Pair	316
	6.4.3	Water Quality for a Production Well near a River	319
6.5		Residence Time Distribution Theory	323
6.6		Standard Flow Patterns	330
	6.6.1	Linear Variation in Detention Times	331
	6.6.2	Injection/Production Well	333
	6.6.3	Repeated Five-Spot Pattern	336

Chapter Seven

Solute Transport by Diffusion 348

- 7.1 Fick's Laws 348
- 7.2 Molecular Diffusion Coefficients 349
- 7.3 Diffusion in Porous Media 350
- 7.4 Diffusion in Multiphase Systems 352
- 7.5 Applications of the Diffusion Equation 354
 - 7.5.1 Point Source in One-Dimension 354
 - 7.5.2 Diffusion from a Constant Concentration Source 357
- 7.6 Volatilization Losses of Soil Contaminants 360
 - Problems 362

Chapter Eight

Advection-Dispersion Transport and Models 365

- 8.1 Introduction 365
- 8.2 One-Dimensional Flow and Column Experiments 366
 - 8.2.1 Background Theory 367
 - 8.2.2 Experimental Results 374
 - 8.2.3 Analysis of Experimental Data 375
 - 8.2.4 Diffusion vs. Dispersion 377
- 8.3 Radial Flow from a Well 378
- 8.4 Transverse Dispersion 384
- 8.5 Mechanical Dispersion Tensor 386
- 8.6 Moments of the Transport Equation 390
- 8.7 Analytical Models of Chemical Spills (Instantaneous Release) 396
 - 8.7.1 Fourier Analysis of Initial Value Problems 397
 - 8.7.2 Point Spill Model 399
 - 8.7.3 Vertically Mixed Spill Model 400
 - 8.7.4 Vertical Mixing Region 401
 - 8.7.5 A Simple Exposure Model 405
 - 8.7.6 Rectangular Source Model 406
- 8.8 Analytical Models of Contaminant Plumes (Continuous Release) 408
 - 8.8.1 Mathematical Considerations in the Development of Contaminant Plume Models 408
 - 8.8.2 A Simple Plume Model 410
 - 8.8.3 Point-Source Plume Model 416
 - 8.8.4 Gaussian-Source Plume Model 417

8.8.5	Horizontal Plane Source (HPS) Plume Model	424
8.9	Numerical Simulation of Solute Transport	428
8.9.1	Numerical Simulation	428
8.9.2	Hybrid Eulerian-Lagrangian Model Formulations	430
8.10	Nonideal Flow in Porous Media	435
8.10.1	Spatially Variable Hydraulic Conductivity	437
8.10.2	Rate-Limited Sorption	437
8.10.3	Nonlinear Isotherms	439
8.11	Subsurface Mass Transport through the Vadose Zone	442
	Problems	453

Chapter Nine

Multiphase Flow and Hydrocarbon Recovery 458

9.1	Principles of Multiphase Flow	459
9.1.1	Capillarity	459
9.1.2	Forces on Fluids in Multiphase Systems	461
9.1.3	Darcy's Law for Multiphase Flow	464
9.1.4	Continuity Equations for Multiphase Flow	469
9.2	Capillary Trapping, Residual Saturation and Mass Transfer	469
9.2.1	Capillary Trapping and Distribution of NAPL	470
9.2.2	Displacement of Residual NAPL Saturation	473
9.2.3	Dissolution of Residual NAPL	474
9.3	NAPL Behavior in Fractured Media	479
9.4	Monitoring of Free-Product Petroleum Hydrocarbon	483
9.4.1	Background and Theory	484
9.4.2	Results for Different Soil Textures	490
9.4.3	Discussion	493
9.5	NAPL Infiltration in the Vadose Zone	494
9.5.1	Kinematic Model for NAPL Infiltration: Theory	495
9.5.2	Kinematic Model for NAPL Infiltration: Implementation	499
9.5.3	A Kinematic Model of Constituent Transport	504
9.6	Screening Models for Fate/Transport of Organic Chemicals in Soil and Groundwater	506
9.6.1	Screening Model for Soil Leaching	506
9.6.2	Hydrocarbon Spill Screening Model	510
9.7	Soil-Vapor Extraction Systems	515
9.8	Free Product Recovery of Petroleum Hydrocarbon Liquids	518
9.8.1	Effective Oil-Layer Saturation and Relative Permeability	519
9.8.2	OIL Recovery Using Pumping Wells	520
9.8.3	Estimation of Recovery Times for Pumping Well Systems	522
9.8.4	Vacuum-Enhanced Recovery Systems	523
9.8.5	Example: Design of a Free-Product Recovery System	524
	Problems	527

Appendix A
Mathematical Formalisms 531

Appendix B 535
Selected Conversions, Parameter Values and Properties 535

Appendix C 537
This Well Function, $W(u)$ 537

Appendix D 538
Spreadsheet Modules for Calculating Well Functions 538

Appendix E 541
Spreadsheet Module for Calculating Slug Test Well Function 541

Appendix F 543
Water Balance for Rainfall Events 543

Appendix G 546
Error and Complementary Error Functions 546

Appendix H 550
Spreadsheet Calculations of LNAPL Distribution 550

Appendix I 556
Spreadsheet for LNAPL Recovery Analysis 557
