

OXFORD

Chemistry of Atmospheres

Third Edition

Soranaree University of Technology

31051000598264

Richard P. Wayne

Contents

1 Chemical composition: a preliminary survey	1
1.1 Earth's atmosphere in perspective	1
1.2 Land, sea, and air	5
1.3 Particles, aerosols, and clouds	7
1.4 Ozone	11
1.5 Cyclic processes	13
1.5.1 Carbon cycle	18
1.5.2 Oxygen cycle	24
1.5.3 Nitrogen cycle	25
1.5.4 Sulphur cycle	27
1.6 Linking biosphere and atmosphere	28
Bibliography	32
2 Atmospheric behaviour as interpreted by physics	45
2.1 Pressures	45
2.2 Radiative heating	50
2.2.1 Solar and planetary radiation	50
2.2.2 Radiation trapping: the 'greenhouse effect'	51
2.2.3 Models of radiation trapping and transfer	53
2.2.4 Trapping in real atmospheres	57
2.2.5 Unstable greenhouses: Venus, Earth, and Mars compared	58
2.2.6 Diurnal and seasonal variations	60
2.3 Temperature profiles	63
2.3.1 Troposphere, stratosphere, and mesosphere	63
2.3.2 Thermosphere, exosphere, and escape	69
2.3.3 Vertical transport	72
2.4 Winds	76
2.5 Condensation and nucleation	80
2.6 Light scattering	85
Bibliography	87
3 Photochemistry and kinetics applied to atmospheres	97
3.1 Photochemical change	97
3.2 Photochemical primary processes	99
3.2.1 Photodissociation and photoionization	101
3.2.2 Reactions of electronically excited species	110
3.3 Adiabatic processes and the correlation rules	112

3.4 Chemical kinetics	116
3.4.1 Bimolecular reactions	117
3.4.2 Unimolecular and termolecular reactions	123
3.4.3 Condensed-phase, surface, and heterogeneous reactions	128
3.4.4 Liquid-phase reactions	128
3.4.5 Heterogeneous reactions	130
3.5 Multistep reaction schemes	134
3.6 Models of atmospheric chemistry	136
3.6.1 Lifetimes and transport	136
3.6.2 Modelling and models	140
3.6.3 Numerical models	140
3.6.4 Families	147
Bibliography	148
4 Ozone in Earth's stratosphere	155
4.1 Introduction	155
4.2 Observations	156
4.3 Oxygen-only chemistry	158
4.3.1 Reaction scheme	158
4.3.2 Chapman layers	160
4.3.3 Comparison of experiment and theory	162
4.4 Influence of trace constituents	164
4.4.1 Catalytic cycles	164
4.4.2 Null cycles, holding cycles, and reservoirs	169
4.4.3 Natural sources and sinks of catalytic species	174
4.4.4 Heterogeneous chemistry	177
4.4.5 Summary of homogeneous chemistry	178
4.4.6 Comparison of experiment and theory	180
4.5 Perturbations of the stratosphere	191
4.5.1 Solar proton events	191
4.5.2 Solar ultraviolet irradiance	193
4.5.3 Quasi-biennial oscillation (QBO)	194
4.5.4 El Niño	194
4.5.5 Volcanoes	195
4.6 Man's impact on the stratosphere	198
4.6.1 Consequences of ozone perturbation	200
4.6.2 Aircraft	207
4.6.3 Rockets and the space shuttle	214
4.6.4 Halocarbons: basic chemistry	216
4.6.5 Halocarbons: loading and ozone depletion potentials	222
4.6.6 Halocarbons: control, legislation, and alternatives	228
4.6.7 Halocarbons: future ozone depletions	231

4.6.8 Nitrous oxide (N ₂ O): agriculture	232
4.6.9 Combined influences: gases, particles, and climate	234
4.7 Polar ozone holes	238
4.7.1 Discovery of abnormal depletion	238
4.7.2 Special features of polar meteorology	241
4.7.3 Anomalous chemical composition	243
4.7.4 Polar stratospheric clouds	245
4.7.5 Perturbed chemistry	247
4.7.6 Origin of chlorine compounds; dynamics	253
4.7.7 The Arctic stratosphere	254
4.7.8 Implications of the polar phenomena	260
4.8 Ozone variations and trends	262
Bibliography	266
5 The Earth's troposphere	321
5.1 Introduction	321
5.2 Sources, sinks, and transport	322
5.2.1 Dry and wet deposition	326
5.2.2 The boundary layer	328
5.2.3 Transport in the troposphere	329
5.3 Oxidation and transformation	330
5.3.1 Photochemical chain initiation	330
5.3.2 Oxidation steps	331
5.3.3 Tropospheric ozone production	334
5.3.4 The importance of NO _x	336
5.3.5 The reaction OH + CO	339
5.3.6 The nitrate radical	339
5.3.7 Reactions with ozone	344
5.4 Biogenic volatile organic compounds	347
5.4.1 Methane	348
5.4.2 Non-methane hydrocarbons and other compounds	349
5.5 Aromatic compounds	361
5.6 Compounds of sulphur	365
5.7 Natural halogen-containing species	372
5.8 Heterogeneous processes and cloud chemistry	379
5.9 Models, observations, and comparisons	388
5.9.1 Tropospheric models	389
5.9.2 Tropospheric measurements of trace species	390
5.9.3 Comparison of measurements and model predictions	394
5.10 Air pollution	403
5.10.1 Clean and polluted air	403
5.10.2 Effects of pollution	404

5.10.3 Primary and secondary pollutants	407
5.10.4 Sulphur dioxide chemistry	409
5.10.5 Smoke and sulphur pollution	414
5.10.6 Acid rain	416
5.10.7 Photochemical ozone and smog	422
5.10.8 Degradation of HFCs and HCFCs	437
5.10.9 Polycyclic aromatic hydrocarbons (PAHs)	440
5.10.10 Biomass burning	442
Bibliography	443
6 Ions in the atmosphere	481
6.1 Electrical charges in the atmosphere	481
6.1.1 Aurora	482
6.1.2 Geomagnetic fluctuations	483
6.1.3 Radio propagation	483
6.2 Ion chemistry in the atmosphere	488
6.3 Ionization mechanisms	493
6.4 Chemistry of specific regions	496
6.4.1 F-region processes	496
6.4.2 E-region processes	497
6.4.3 D-region positive ion chemistry	500
6.4.4 D-region negative-ion chemistry	505
6.5 Ions in the stratosphere and troposphere	509
Bibliography	511
7 The airglow	525
7.1 Optical emission from planetary atmospheres	525
7.2 Excitation mechanisms	528
7.3 Airglow intensities and altitude profiles	531
7.4 Specific emission sources	534
7.4.1 Atomic and molecular oxygen	534
7.4.2 Atomic sodium	542
7.4.3 Hydroxyl radicals	547
Bibliography	549
8 Extraterrestrial atmospheres	561
8.1 Introduction	561
8.2 Venus	562
8.2.1 Atmospheric composition	562
8.2.2 Clouds	564

8.2.3 Lightning	565
8.2.4 Sub-cloud chemistry	566
8.2.5 Stratospheric chemistry	569
8.3 Mars	574
8.3.1 Atmospheric structure and composition	574
8.3.2 Carbon dioxide photochemistry	577
8.3.3 Ionospheric chemistry	581
8.4 Jupiter and Saturn	585
8.5 Titan, Io, Europa, and Callisto	595
8.5.1 Titan	595
8.5.2 Io, Europa, and Callisto	603
8.6 Uranus, Neptune, Triton, and Pluto	606
8.7 Comets	613
Bibliography	615
9 Evolution and change in atmospheres and climates	651
9.1 Sources of atmospheric constituents	651
9.1.1 Origin and development of atmospheres	651
9.1.2 Interstellar clouds and their chemistry	653
9.2 Noble gases and nitrogen in planetary atmospheres	655
9.2.1 Inner planets	655
9.2.2 Titan	658
9.3 Isotopic enrichment	660
9.4 Evolution of Earth's atmosphere	665
9.5 Climates in the past	673
9.6 Climates of the future	678
9.6.1 Radiatively active gases and particles in the atmosphere	678
9.6.2 Radiative forcing	681
9.6.3 Feedbacks and models	683
9.6.4 Detection of twentieth-century climate change	685
9.6.5 Projected changes in concentrations, forcing and climate	688
9.6.6 Aircraft	691
9.6.7 Impacts of climate change	693
9.6.8 Legislation and policy	696
9.7 A doomed biosphere?	697
Bibliography	697
Index	737
