Preface xi

CHAPTER 1

Introduction to Protein Structure 1

PROBLEMS 5

REFERENCES 5

CHAPTER 2

Solid-State and Solution Methods for Determining Biological

Macromolecular Structure 6

DIFFRACTION METHODS 6

X-RAY CRYSTALLOGRAPHY 7

CRYSTALLIZATION 8

X-RAY DATA COLLECTION 9

RESOLUTION 11

STRUCTURE FACTORS, PHASES, AND REFINEMENT 12

MATHEMATICAL RELATIONSHIPS 13

Obtaining the Amplitude 13

Calculating the Electron Density 13

The Structure Factor 13

Multiple Heavy Atom Derivatives 14

DETERMINING THE POSITIONS OF HEAVY ATOMS 14

Calculating Patterson Maps 14

Locating Heavy Atom Sites from Patterson Maps 14

MOLECULAR REPLACEMENT: CALCULATING PHASES USING A
HOMOLOGOUS STRUCTURE 17

TEMPERATURE FACTORS 18

REFINEMENT 19

ELECTRON DENSITY MAPS AND DIFFERENCE ELECTRON
DENSITY MAPS 19

SUMMARY: DETERMINATION OF THE CRYSTAL STRUCTURE
OF PROTEINS 21

NUCLEAR MAGNETIC RESONANCE METHODS FOR DETERMINING SOLUTION STRUCTURE	21
PROBLEMS	24
REFERENCES	24

CHAPTER 3

Crystallographic Coordinates and Stereodrawings	25
INTRODUCTION	25
HEADER RECORDS OF PDB FILES	26
COORDINATES	29
ATOM RECORDS IN A PDB FILE	30
ATOM LABELS	30
STEREODRAWINGS	32
STEREOGLASSES	34
DIVERGENT EYES	36
CROSSED EYES	37
THE AMINO ACIDS	37
VIEWING PROTEIN MODELS WITH A COMPUTER	39
THE FOUR-LETTER IDENTIFICATION CODE	39
DOWNLOADING COORDINATES WITH FTP	40
WORLD WIDE WEB PAGE FOR PDB	40
DISPLAYING PDB COORDINATES	41
PREKIN AND MAGE	41
Text, Captions, and Colors	43
Views	43
Adding Lines and/or Labels	44
Local Rotations	44
Making Measurements with the MAGE Display	45
Hardcopy	45
SUMMARY	46
PROBLEMS	46
Learning about PDB Files	46
Practicing Stereovision	46
Using Computer Graphics	47
REFERENCES	47
APPENDIX 1: KINEMAGE COLOR PALETTE (DCR)	47
APPENDIX 2: MAGE KEYWORDS AND PARAMETERS (DCR)	48

CHAPTER 4

Properties of Biomacromolecules in the Crystalline State	50
INTRODUCTION	50
PROTEIN CRYSTALS	50
PHYSICAL PROPERTIES	51
CHEMISTRY OF CRYSTALLINE PROTEINS	52
CHEMICAL REACTIVITY	53
ENZYMATIC AND BIOLOGICAL ACTIVITY	54

CRYSTAL VERSUS SOLUTION NMR STUDIES	55
CRYSTALLOGRAPHIC TEMPERATURE FACTORS	56
STRUCTURAL HETEROGENEITY IN PROTEIN CRYSTALS	58
SUMMARY	59
PROBLEMS	59
Practicing Stereovision	59
Learning about PDB Files	59
Using Computer Graphics	60
REFERENCES	60

CHAPTER 5

Quaternary Structure of Proteins	61
INTRODUCTION	61
ASSOCIATION OF PROTEIN SUBUNITS	61
HELICAL OR CONTINUOUS PROTEIN POLYMERS	62
THE QUATERNARY STRUCTURE OF CLOSED AGGREGATES: OLIGOMERIC ENZYMES	64
BIOLOGICAL IMPLICATIONS OF QUATERNARY STRUCTURE	68
SURFACE ACCESSIBILITY	69
GENERATING COORDINATES FOR OTHER SUBUNITS	71
SUMMARY	72
PROBLEMS	72
Practicing Stereovision	72
Using Computer Graphics	73
REFERENCES	73

CHAPTER 6

Secondary Structure of Proteins	75
INTRODUCTION	75
THE CHEMICAL NATURE OF A POLYPEPTIDE CHAIN	75
DEFINITIONS OF SECONDARY STRUCTURE	78
β STRUCTURE	81
TURNS	82
THE COLLAGEN TRIPLE HELIX	82
PREDICTION OF SECONDARY STRUCTURE	83
SUMMARY	83
PROBLEMS	84
Practicing Stereovision	84
Using Computer Graphics	84
REFERENCES	84

CHAPTER 7

Domains and Supersecondary Structure	86
INTRODUCTION	86
DOMAINS	87

Supersecondary Structure	95
SUMMARY	97
PROBLEMS	97
Practicing Stereovision	97
Using Computer Graphics	98
REFERENCES	98

CHAPTER 8

Conformational States in Crystal and Nuclear Magnetic Resonance Structures 99

INTRODUCTION	99
COMPARISON OF TWO CONFORMATIONAL STATES	100
THE OXYGENATION OF HEMOGLOBIN: TWO CRYSTAL CONFORMATIONS	102
CONFORMATIONAL STATES IN OTHER CRYSTALLOGRAPHIC ANALYSES	109
SUMMARY	110
PROBLEMS	111
Practicing Stereovision	111
Using Computer Graphics	111
REFERENCES	111
APPENDIX	112

CHAPTER 9

Hydrogen Bonds and Water Molecules in Crystalline Proteins 114

INTRODUCTION	114
HYDROGEN-BONDING POSITIONS IN PROTEINS	115
NEUTRON DIFFRACTION	117
WATER MOLECULES OBSERVED IN CRYSTALLINE PROTEINS	119
THE DISTRIBUTION OF PROTEIN-BOUND WATER	120
WATER NETWORKS IN CRYSTALLINE PROTEINS	123
SUMMARY	124
PROBLEMS	124
Practicing Stereovision	124
Using Computer Graphics	124
REFERENCES	125

CHAPTER 10

Protein and Nucleic Acid Complexes 126

INTRODUCTION	126
STRUCTURAL DATA DESCRIBING DNA	127
INTERACTION BETWEEN DNA AND SITE-SPECIFIC PROTEINS	130
DNA-BINDING MOTIFS	130
HELIX-TURN-HELIX	131
PHAGE 434 REPRESSOR-DNA COMPLEX	132

A LEUCINE ZIPPER	132
SUMMARY	134
PROBLEMS	135
Practicing Stereovision	135
Using Computer Graphics	135
REFERENCES	135

CHAPTER 11

Metal Ions Bound to Proteins	137
INTRODUCTION	137
COORDINATION OF METALS IN PROTEINS	138
FUNCTIONAL REASONS FOR METAL ION BINDING	139
A METAL ION PROVIDING A CONFORMATIONAL FUNCTION	140
METALLOPROTEINS FOR TRANSPORT AND STORAGE	140
METALLOPROTEINS AS REDOX INTERMEDIATES	141
METALLOPROTEINS THAT BIND DIOXYGEN	144
METALLOPROTEINS THAT SERVE A CATALYTIC FUNCTION	144
SUMMARY	146
PROBLEMS	147
Practicing Stereovision	147
Using Computer Graphics	147
REFERENCES	147

CHAPTER 12

Lipid-Protein Interactions	148
INTRODUCTION	148
ELECTRON MICROSCOPY, ELECTRON DIFFRACTION, AND MEMBRANE PROTEIN STRUCTURE	149
MEMBRANE PROTEIN STRUCTURE BY ELECTRON MICROSCOPY AND X-RAY METHODS	150
LIPID-METABOLIZING ENZYMES	152
LIPID TRANSPORT AND STORAGE PROTEINS	154
SUMMARY	156
PROBLEMS	156
Practicing Stereovision	156
Using Computer Graphics	156
REFERENCES	157

APPENDIX 1

Extra Reading in Structural Biology	158
