Introduction to
ORGANIC CHEMISTRY
SECOND EDITION

1 Covalent Bonding and Shapes of Molecules 1

1.1 Electronic Structure of Atoms 2

1.2 Lewis Model of Bonding 6

1.3 Bond Angles and Shapes of Molecules 14

CHEMICAL CONNECTIONS • Buckyball—A New Form of Carbon 18

1.4 Polar and Nonpolar Molecules 18

1.5 Resonance 20

1.6 Valence Bond Model of Covalent Bonding 22

1.7 Functional Groups 27

Summary 31

Additional Problems 32

2 Acids and Bases 39

2.1 Brønsted-Lowry Acids and Bases 40

2.2 Quantitative Measure of Acid and Base Strength 42

2.3 Molecular Structure and Acidity 44

2.4 Position of Equilibrium in Acid-Base Reactions 46

2.5 Lewis Acids and Bases 48

Summary 49

Key Reactions 50

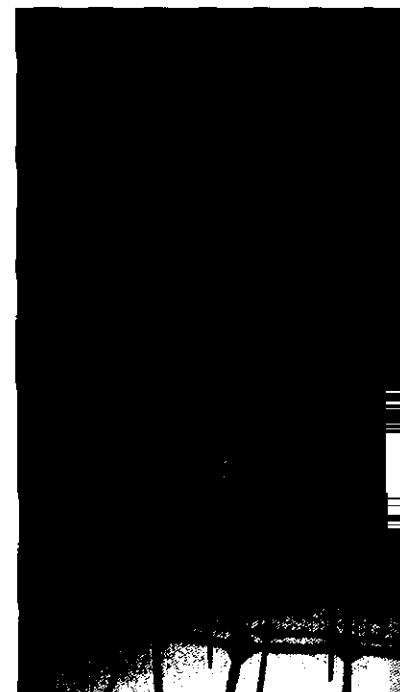

Additional Problems 50

3 Alkanes and Cycloalkanes 54

3.1 Structure of Alkanes 55

3.2 Constitutional Isomerism in Alkanes 56

CHEMICAL CONNECTIONS • Counting the Number of Constitutional Isomers 59

- 3.3 Nomenclature of Alkanes 59
- 3.4 Cycloalkanes 64
- 3.5 The IUPAC System—A General System of Nomenclature 65
- 3.6 Conformations of Alkanes and Cycloalkanes 67
- 3.7 Cis, Trans Isomerism in Cycloalkanes 73
- CHEMICAL CONNECTIONS • The Poisonous Puffer Fish 74
- 3.8 Physical Properties of Alkanes and Cycloalkanes 78
- 3.9 Reactions of Alkanes 81
- 3.10 Sources of Alkanes 81
- Summary 84
- Key Reactions 85
- Additional Problems 85

4 Chirality 91

- 4.1 Stereoisomerism 92
- 4.2 Chirality 92
- 4.3 Naming Stereocenters—The R,S System 95
- 4.4 Acyclic Molecules with Two or More Stereocenters 99
- 4.5 Cyclic Molecules with Two or More Stereocenters 102
- 4.6 Properties of Stereoisomers 105
- 4.7 Optical Activity—How Chirality Is Detected in the Laboratory 105
- 4.8 Separation of Enantiomers—Resolution 108
- 4.9 The Significance of Chirality in the Biological World 111
- CHEMICAL CONNECTIONS • Chiral Drugs 112
- Summary 113
- Additional Problems 114

5 Alkenes and Alkynes 120

- 5.1 Structure 122
- 5.2 Nomenclature 124
- CHEMICAL CONNECTIONS • The Case of the Iowa and New York Strains of the European Corn Borer 130
- 5.3 Physical Properties 131

5.4 Naturally Occurring Alkenes—The Terpenes 131

CHEMICAL CONNECTIONS • Why Plants Emit Isoprene 132

CHEMICAL CONNECTIONS • Terpenes of the Cotton Plant 136

Summary 135

Additional Problems 136

A Conversation with. . . CARL DJERASSI 142

6 Reactions of Alkenes 145

6.1 An Overview 146

6.2 Reaction Mechanisms 147

6.3 Electrophilic Addition Reactions 149

6.4 Oxidation of Alkenes—Formation of Glycols 160

6.5 Reduction of Alkenes—Formation of Alkanes 164

6.6 Reactions That Produce Chiral Compounds 166

Summary 169

Key Reactions 170

Additional Problems 171

7 Haloalkanes 175

7.1 Nomenclature 176

CHEMICAL CONNECTIONS • Methyl Bromide—An Ozone-Depleting Pesticide 177

CHEMICAL CONNECTIONS • Artificial Blood 179

7.2 Nucleophilic Aliphatic Substitution 180

7.3 Mechanisms of Nucleophilic Aliphatic Substitution 181

7.4 Factors That Influence the Rate of S_N1 and S_N2 Reactions 185

7.5 An Analysis of Several Nucleophilic Substitution Reactions 188

7.6 β -Elimination 191

7.7 Mechanisms of β -Elimination 192

Summary 195

Key Reactions 195

Additional Problems 196

8 Alcohols, Ethers, and Thiols 201

8.1 Structure 202

8.2 Nomenclature 203

8.3 Physical Properties 208

8.4 Reactions of Alcohols 212

CHEMICAL CONNECTIONS • Blood Alcohol Screening 222

8.5 Reactions of Ethers 223

8.6 Epoxides 223

8.7 Acid-Catalyzed Ring Opening of Epoxides 225

CHEMICAL CONNECTIONS • Ethylene Oxide—A Chemical Sterilant 225

8.8 Reactions of Thiols 227

Summary 228

Key Reactions 229

Additional Problems 231

9 Benzene and Its Derivatives 236

9.1 The Structure of Benzene 237

9.2 The Concept of Aromaticity 240

9.3 Nomenclature 243

9.4 Phenols 246

CHEMICAL CONNECTIONS • Capsaicin, for Those Who Like It Hot 247

CHEMICAL CONNECTIONS • Phytoalexins—Natural Plant Antibiotics 250

9.5 Oxidation at a Benzylic Position 252

9.6 Electrophilic Aromatic Substitution 254

9.7 Mechanism of Electrophilic Aromatic Substitution 255

9.8 Disubstitution 262

Summary 269

Key Reactions 269

Additional Problems 271

10 Amines 277

10.1 Structure and Classification 278

CHEMICAL CONNECTIONS • Morphine and Related Analgesics 280

10.2 Nomenclature 280

10.3 Physical Properties 284

10.4 Basicity 284

CHEMICAL CONNECTIONS • The Poison Dart Frogs of South America—
Lethal Amines 286

10.5 Reaction with Acids 290

Summary 293

Key Reactions 293

Additional Problems 294

A Conversation with. . . JACQUELYN GERVAY 299

11 Aldehydes and Ketones 302

11.1 Structure and Bonding 303

11.2 Nomenclature 303

11.3 Physical Properties 307

11.4 Reactions 308

11.5 Addition of Carbon Nucleophiles 308

11.6 Addition of Oxygen Nucleophiles 312

11.7 Addition of Nitrogen Nucleophiles 315

11.8 Keto-Enol Tautomerism 318

11.9 Oxidation 320

11.10 Reduction 322

CHEMICAL CONNECTIONS • A Green Synthesis of Adipic Acid 323

Summary 327

Key Reactions 327

Additional Problems 329

12 Carboxylic Acids 336

12.1 Structure 337

12.2 Nomenclature 337

CHEMICAL CONNECTIONS • Abscisic Acid, a Potent Plant Growth
Regulator 341

12.3 Physical Properties 341

12.4 Acidity 343

12.5 Reduction 347

CHEMICAL CONNECTIONS • From Willow Bark to Aspirin and Beyond 348

12.6 Esterification 350

- CHEMICAL CONNECTIONS • Esters as Flavoring Agents 351
- 12.7 Conversion to Acid Halides 353
- 12.8 Decarboxylation 354
- CHEMICAL CONNECTIONS • Ketone Bodies and Diabetes 355
- CHEMICAL CONNECTIONS • Sunblocks and Sunscreens 356
- Summary 358
- Key Reactions 359
- Additional Problems 360

13 Functional Derivatives of Carboxylic Acids 364

- 13.1 Structure and Nomenclature 365
- CHEMICAL CONNECTIONS • From Moldy Clover to a Blood Thinner 367
- CHEMICAL CONNECTIONS • Insecticides of Plant Origin—Polyunsaturated *N*-Isobutylamides 369
- CHEMICAL CONNECTIONS • The Penicillins and Cephalosporins— β -Lactam Antibiotics 371
- 13.2 Characteristic Reactions 371
- 13.3 Reaction with Water—Hydrolysis 373
- 13.4 Reaction with Alcohols 376
- 13.5 Reaction with Ammonia and Amines 377
- CHEMICAL CONNECTIONS • Pets, Fleas, and Insect Juvenile Hormones 379
- 13.6 Interconversion of Functional Derivatives 379
- 13.7 Esters with Grignard Reagents 380
- 13.8 Reduction 382
- Summary 384
- Key Reactions 385
- Additional Problems 386

14 Enolate Anions 393

- 14.1 Formation of Enolate Anions 394
- 14.2 The Aldol Reaction 397
- 14.3 The Claisen and Dieckmann Condensations 402
- 14.4 Claisen and Aldol Condensations in the Biological World 408

- Summary 410
Key Reactions 410
Additional Problems 411

15 Organic Polymer Chemistry 416

- 15.1 The Architecture of Polymers 417
15.2 Polymer Notation and Nomenclature 418
15.3 Polymer Morphology—Crystalline Versus Amorphous Materials 419
15.4 Step-Growth Polymerizations 420
CHEMICAL CONNECTIONS • Stitches That Dissolve 426
15.5 Chain-Growth Polymerizations 427
CHEMICAL CONNECTIONS • Recycling of Plastics 430
Summary 433
Key Reactions 434
Additional Problems 435

A Conversation with. . . ROALD HOFFMANN 437

16 Carbohydrates 441

- 16.1 Monosaccharides 442
CHEMICAL CONNECTIONS • The Genius of Emil Fischer 447
16.2 The Cyclic Structure of Monosaccharides 448
16.3 Physical Properties 453
16.4 Reactions of Monosaccharides 454
16.5 Glucose Assay—The Search for Specificity 457
16.6 L-Ascorbic Acid (Vitamin C) 458
16.7 Disaccharides and Oligosaccharides 459
CHEMICAL CONNECTIONS • Glycosidase Inhibitors—Natural Defensive Weapons of Plants 462
16.8 Polysaccharides 463
Summary 466
Key Reactions 467
Additional Problems 469

17 Lipids 474

17.1 Triglycerides 475

17.2 Soaps and Detergents 478

17.3 Prostaglandins 481

17.4 Steroids 483

CHEMICAL CONNECTIONS • Nonsteroidal Estrogen Antagonists 486

17.5 Phospholipids 490

CHEMICAL CONNECTIONS • Snake Venom Phospholipases 492

17.6 Fat-Soluble Vitamins 493

Summary 496

Additional Problems 497

18 Amino Acids and Proteins 501

18.1 Amino Acids 502

18.2 Acid-Base Properties of Amino Acids 505

18.3 Polypeptides and Proteins 510

18.4 Primary Structure of Polypeptides and Proteins 512

18.5 Three-dimensional Shapes of Polypeptides and Proteins 517

Summary 525

Key Reactions 525

Additional Problems 526

19 Nucleic Acids 531

19.1 Nucleosides and Nucleotides 532

CHEMICAL CONNECTIONS • Retroviruses—From RNA to DNA 533

CHEMICAL CONNECTIONS • The Search for Antiviral Drugs 534

19.2 The Structure of DNA 536

19.3 Ribonucleic Acids 543

19.4 The Genetic Code 546

19.5 Sequencing Nucleic Acids 549

CHEMICAL CONNECTIONS • DNA Fingerprinting 551

Summary 553

Additional Problems 554

20 The Organic Chemistry of Metabolism 558

- 20.1 Five Key Participants in β -Oxidation and Glycolysis 559
- 20.2 Fatty Acids as a Source of Energy 564
- 20.3 β -Oxidation of Fatty Acids 564
- 20.4 Digestion and Absorption of Carbohydrates 568
- 20.5 Glycolysis 568
- CHEMICAL CONNECTIONS • Lactose Intolerance 569
- 20.6 The Ten Reactions of Glycolysis 570
- 20.7 The Fates of Pyruvate 576
- Summary 579
- Key Reactions 579
- Additional Problems 580

A Conversation with. . . JONATHAN SESSLER 583

21 Nuclear Magnetic Resonance Spectroscopy 587

- 21.1 Electromagnetic Radiation 588
- 21.2 Molecular Spectroscopy 590
- 21.3 The Origin of Nuclear Magnetic Resonance 591
- 21.4 Nuclear Magnetic "Resonance" 592
- 21.5 An NMR Spectrometer 593
- 21.6 Equivalent Hydrogens 594
- 21.7 Signal Areas 596
- 21.8 Chemical Shift 598
- 21.9 Signal Splitting and the ($n + 1$) Rule 599
- 21.10 ^{13}C -NMR Spectroscopy 601
- CHEMICAL CONNECTIONS • Magnetic Resonance Imaging 602
- 21.11 Interpreting NMR Spectra 604
- 21.12 Solving NMR Problems 609
- Summary 613
- Additional Problems 613

22 Infrared Spectroscopy 623

22.1 Infrared Spectroscopy 624

22.2 Interpreting Infrared Spectra 627

Summary 634

Additional Problems 634

Appendix 1 Reagents and Their Uses A.1

Appendix 2 Acid Ionization Constants for the Major Classes of Organic Acids A.3

Appendix 3 Characteristic $^1\text{H-NMR}$ Chemical Shifts A.4

Appendix 4 Characteristic $^{13}\text{C-NMR}$ Chemical Shifts A.5

Appendix 5 Characteristic Infrared Vibrations A.6

Appendix Glossary G.1

Appendix Index I.1
