AN AVIATION WEEK BOOK

Contents

Preface xi

Introduction xv

1 Surface observations (METAR) 1

- Type of report 6
- Station identifier 7
- Date/Time group 8
- Report modifier 8
- Wind 9
- Visibility 13
- Atmospheric phenomena 19
 - Precipitation 23
 - Obstructions to vision 30
- Sky condition 36
- Temperature, dew point,
and altimeter setting 45
- Remarks 48
 - Automated, manual, and
plain language 50
 - Additive and automated
maintenance data 57

2 Pilot weather reports (UA, UUA, PIREPs) 61

- PIREP format 62
- Turbulence 68
- Icing 72
- Remarks 79

3 Satellite imagery 85

- Geographical features 88
- Weather features 89
- Basic interpretation and application 98

4	Weather advisories	107
	Introduction to forecasts	109
	Accuracy	110
	Specificity	112
	Expectations	115
	AIRMET Bulletin (WA)	116
	IFR and mountain obscuration	120
	Turbulence, winds, and low-level wind shear	121
	Icing and freezing level	124
	SIGMETs (WS)	129
	Convective SIGMETs (WST)	134
	Severe weather bulletins	137
	Center weather advisories (CWA)	142
	Dissemination	144

5	The area forecast (FA)	149
	Synopsis	153
	VFR clouds and weather	155
	Outlook	160
	Area forecast update criteria	161
	Alaskan, Hawaiian, and Gulf of Mexico/Caribbean area forecasts	163
	Using the area forecast	173
	Significant weather prognostic charts	182

6	TWEB route forecasts	197
	Synopsis	199
	Significant clouds and weather	201
	Local vicinity forecasts	203
	Amendment criteria	204
	Using the TWEB route forecast	205

7	Terminal aerodrome forecast (TAF)	213
	Conditional terms	218
	Forecast change groups	220
	Amendment criteria	225
	Using the terminal forecast	228

8	Winds and temperatures aloft forecast (FD)	235
	Tabulated forecasts	236
	Forecast charts	240
	Amendment criteria	242
	Using the FD forecast	242

9 Radar and convective analysis charts 251

- Radar 252
- Lightning detection equipment 257
- Automated radar weather reports (RAREPS) 258
- The radar summary chart 262
- Using NEXRAD, RAREPS, and the radar summary chart 264
- The convective outlook and severe weather outlook chart 267
- Moisture/stability charts 271
- Microbursts and low-level wind shear 277
 - Wind shear recognition 278
 - Takeoff, approach, and landing precautions 282
 - Wind shear recovery technique 282

10 Air analysis charts 285

- The surface analysis chart 286
 - Surface analysis station model 288
 - Surface chart analysis 292
- The weather depiction chart 299
 - Weather depiction station model 299
 - Weather depiction chart analysis 301
- Upper air analysis charts 302
 - Constant pressure chart station model 302
 - 850-mb and 700-mb constant pressure charts 305
 - 500-mb constant pressure chart 308
 - 300-mb and 200-mb constant pressure charts 311
 - Jet stream 312
- Observed winds aloft chart 317
- Vorticity 318
- Upper-level weather systems 321

11 The weather briefing 327

- Standard briefing 332
 - Background information 332
 - Briefing format 334
- Abbreviated briefing 338
 - Requests for specific information 338
 - Requests to update a previous briefing 338
 - Requests for information to supplement FAA mass dissemination systems 340
- Outlook briefing 340
- In-flight briefing 340
- The FAA's pilot weather briefing service 341
- Using the FAA's weather briefing service 345
- Using commercial weather briefing services/DUATs 347

Updating weather	349
Flight service station communications	350
FSS common frequency	350
Local airport advisory (LAA) frequency	351
Discrete frequency	351
Enroute flight advisory service (Flight Watch)	354
Using the system	360

Appendix A: Abbreviations 367

Weather	368
International	401

Appendix B: Forecast and report locations 415

Weather advisory plotting chart locations	415
Weather advisory plotting chart	416
TWEB routes	427
NWS weather radar	428
NWS weather radar site locations	429

Appendix C: Area designators 437

Area Forecast areas of coverage, states	438
Area Forecast designators (NW, SW, C, NE, SE)	439
Alaskan and Hawaii Area Forecast designators	444
Atlantic, Caribbean, and Gulf or Mexico Area Forecast areas of coverage	445

Glossary 447

Index 467
