Contents

Preface *xvii*

1 What Is Analytical Chemistry? *1*

1A The Role of Analytical Chemistry *2*

1B Classifying Quantitative Analytical Methods *4*

1C Stepping Through a Typical Quantitative Analysis *5*

1D An Integral Role for Chemical Analysis: Feedback Control Systems *10*

FEATURES

1-1 • Deer Kill: A Case Study Illustrating the Use of Analytical Chemistry to Solve a Problem in Toxicology *12*

Section I **The Tools of Analytical Chemistry** *19*

2 Chemicals and Apparatus: Putting the Tools to Work *21*

2A Selecting and Handling Reagents and Other Chemicals *22*

2B Cleaning and Marking Laboratory Ware *23*

2C Evaporating Liquids *24*

2D Measuring Mass *24*

2E The Equipment and Manipulations Associated with Weighing *31*

2F The Equipment and Manipulations for Filtration and Ignition *35*

2G Measuring Volume *41*

2H Calibrating Volumetric Ware *50*

2I The Laboratory Notebook *52*

2J Using Spreadsheets in Analytical Chemistry *54*

2K Safety in the Laboratory *59*

3 Important Chemical Concepts: Expressing Quantities and Concentrations *61*

3A Some Important Units of Measurement *61*

3B Solutions and Their Concentrations *65*

3C Chemical Stoichiometry *73*

3D Questions and Problems *76*

FEATURES

3-1 • Distinguishing between Mass and Weight *63*

3-2 • Atomic Mass Units and the Mole *64*

3-3 • Another Approach to Example 3-2 *66*

4 The Basic Approach to Chemical Equilibrium *79*

4A The Chemical Composition of Aqueous Solutions *79*

4B Chemical Equilibrium *83*

WEB WORKS *101*

4C Questions and Problems *101*

FEATURES

4-1 • Amphiprotic Species *81*

4-2 • Stepwise and Overall Formation Constants for Complex Ions *86*

4-3 • Why $[H_2O]$ Does Not Appear in Equilibrium-Constant Expressions for Aqueous Solutions *87*

4-4 • Relative Strengths of Conjugate Acid/Base Pairs *93*

4-5 • The Method of Successive Approximations *97*

5 Errors in Chemical Analyses: Assessing the Quality of Results *103*

5A Defining Terms *104*

5B Systematic Errors *108*

WEB WORKS *116*

5C Questions and Problems *116*

6 Random Error: How Certain Can We Be? *117*

6A The Nature of Random Errors *117*

6B Treating Random Errors with Statistics *120*

6C The Standard Deviation of Computed Results *139*

6D Reporting Computed Data *142*

WEB WORKS *146*

6E Questions and Problems *146*

FEATURES

6-1 • Flipping Coins: A Student Activity to Illustrate a Normal Distribution *121*

6-2 • How Do You Calculate Those Areas under a Curve? *124*

6-3 • The Significance of Number of Degrees of Freedom *126*

6-4 • Equation for Calculating Pooled Standard Deviations *134*

7 Statistical Analysis: Evaluating the Data *149*

7A Confidence Limits *149*

7B Statistical Aids to Hypothesis Testing *153*

7C Detecting Gross Errors *157*

7D Analyzing Two-Dimensional Data: The Least Squares Method *160*

WEB WORKS *172*

7E Questions and Problems *173*

Section II **Principles and Applications of Chemical Equilibria** *177*

8 Gravimetric Methods of Analysis *179*

8A Properties of Precipitates and Precipitating Reagents *180*

8B Drying and Ignition of Precipitates *191*

8C Calculating Results from Gravimetric Data *192*

8D Applications of Gravimetric Methods *194*

WEB WORKS *201*

8E Questions and Problems *201*

FEATURES

8-1 • Specific Surface Area of Colloids *187*

9 Electrolyte Effects: Activity or Concentration? *204*

9A Effects of Electrolytes on Chemical Equilibria *204*

9B Activity Coefficients *207*

WEB WORKS *219*

9C Questions and Problems *219*

FEATURES

9-1 • Mean Activity Coefficients *211*

10 How Equilibrium Calculations Can Be Applied to Complex Systems *221*

10A Solving Multiple-Equilibrium Problems by a Systematic Method *222*

10B Calculating Solubilities by the Systematic Method *226*

10C Separating Ions by pH Control: Sulfide Separations *23*

WEB WORKS *244*

10D Questions and Problems *244*

FEATURES

10-1 • Algebraic Expressions Needed to Calculate Solubility of CaC_2O_4 in Water *231*

10-2 • Immunoassay: Equilibria in the Specific Determination of Drugs *235*

11 Titrations: Taking Advantage of Stoichiometric Reactions *246*

11A Some General Aspects of Volumetric Titrimetry *247*

11B Standard Solutions *249*

11C Volumetric Calculations *250*

11D Titration Curves *258*

WEB WORKS *261*

11E Questions and Problems *261*

FEATURES

11-1 • The Factor-Label Approach to Example 11-6 *255*

11-2 • How Did We Calculate the Volumes of NaOH Shown in the First Column of Table 11-1? *260*

12 Principles of Neutralization Titrations: Determining Acids, Bases, and the pH of Buffer Solutions *265*

12A What Solutions and Indicators Are Used? *265*

12B Calculating pH in Titrations of Strong Acids and Strong Bases *269*

12C Buffer Solutions *276*

12D Calculating pH in Weak Acid Titrations *287*

12E Calculating pH in Titrations of Weak Bases *293*

12F How Do Buffer Solutions Change as a Function of pH? *297*

WEB WORKS *299*

12G Questions and Problems *299*

FEATURES
12-1 • Constructing Titration Curves from the Charge-Balance Equation *274*
12-2 • How Many Significant Figures Should We Retain in Titration Curve Calculations? *275*
12-3 • Applying the Systematic Method to Buffer Calculations *277*
12-4 • The Henderson–Hasselbach Equation *278*
12-5 • Acid Rain and the Buffer Capacity of Lakes *282*
12-6 • Determining Dissociation Constants for Weak Acids and Bases *291*
12-7 • Determining the p*K* Values for Amino Acids *295*

13 Titrating Polyfunctional Acids and Bases *303*

13A Polyfunctional Acids *303*
13B Describing Polyfunctional Bases *303*
13C Finding the pH of Solutions of Amphiprotic Salts *305*
13D Constructing Titration Curves for Polyfunctional Acids *308*
13E Drawing Titration Curves for Polyfunctional Bases *314*
13F The Composition of Polyprotic Acid Solutions as a Function of pH *317*
WEB WORKS *324*
13G Questions and Problems *324*
FEATURES
13-1 • Combining Equilibrium-Constant Expressions *304*
13-2 • How Was Equation 13-3 Generated? *306*
13-3 • The Dissociation of Sulfuric Acid *314*
13-4 • Titration Curves for Amino Acids *316*
13-5 • A General Expression for Alpha Values *318*

14 Applying Neutralization Titrations *327*

14A Reagents for Neutralization Titrations *327*
14B Typical Applications of Neutralization Titrations *333*
WEB WORKS *340*
14C Questions and Problems *340*
FEATURES
14-1 • Determining Total Serum Protein *334*
14-2 • Other Methods for Determining Organic Nitrogen *335*

15 Complexation and Precipitation Titrations: Taking Advantage of Complexing and Precipitating Agents *345*

15A Forming Complexes *345*

15B Titrations with Inorganic Complexing Agents *351*

15C Organic Complexing Agents *359*

15D Titrations with Aminocarboxylic Acids *361*

WEB WORKS *382*

15E Questions and Problems *383*

FEATURES

15-1 • Determination of Hydrogen Cyanide in Acrylonitrile Plant Streams *353*

15-2 • Species Present in a Solution of EDTA *362*

15-3 • EDTA as a Preservative *364*

15-4 • How Can Masking and Demasking Agents Be Used to Enhance the Selectivity of EDTA Titrations? *381*

15-5 • Test Kits for Water Hardness *382*

Section III **Electrochemical Methods** *387*

16 Elements of Electrochemistry *389*

16A Characterizing Oxidation/Reduction Reactions *389*

16B Electrochemical Cells *394*

16C Electrode Potentials *397*

WEB WORKS *415*

16D Questions and Problems *416*

FEATURES

16-1 • Balancing Redox Equations *391*

16-2 • The Daniell Gravity Cell *396*

16-3 • Why We Cannot Measure Absolute Electrode Potentials *401*

16-4 • Sign Conventions in the Older Literature *411*

16-5 • Why Are There Two Electrode Potentials for Br_2 in Table 16-1? *413*

17 Using Electrode Potentials *419*

17A Calculating Potentials of Electrochemical Cells *419*

17B Calculating Redox Equilibrium Constants *423*

17C Constructing Redox Titration Curves *428*

17D Oxidation/Reduction Indicators *439*

17E Potentiometric End Points *441*
WEB WORKS *441*
17F Questions and Problems *442*
FEATURES
17-1 • Biological Redox Systems *424*

18 Applying Oxidation/Reduction Titrations *444*

18A Auxiliary Oxidizing and Reducing Reagents *444*
18B Applying Standard Reducing Agents *446*
18C Applying Standard Oxidizing Agents *450*
WEB WORKS *466*
18D Questions and Problems *467*
FEATURES
18-1 • Determination of Chromium Species in Water Samples *453*
18-2 • Antioxidants *458*

19 Potentiometry: Measuring Concentrations of Ions and Molecules *471*

19A General Principles *471*
19B What Reference Electrodes Are Used? *472*
19C Dealing with Liquid-Junction Potentials *474*
19D Indicator Electrodes *475*
19E Instruments for Measuring Cell Potential *493*
19F Direct Potentiometry *493*
19G Following Titrations by Potentiometry *499*
WEB WORKS *505*
19H Questions and Problems *505*
FEATURES
19-1 • An Easily Constructed Liquid-Membrane Ion-Selective Electrode *487*
19-2 • Point-of-Care Testing: Blood Gases and Blood Electrolytes with Portable Instrumentation *490*

20 A Brief Look at Some Other Electroanalytical Methods *508*

20A How Does Current Affect the Potential of Electrochemical Cells? *509*
20B Are Electrolytic Methods Selective? *515*
20C Electrogravimetric Methods: Weighing the Deposit *516*
20D Coulometric Methods of Analysis *522*
20E Voltammetry *531*

20F Some Additional Electroanalytical Methods *539*
WEB WORKS *540*
20G Questions and Problems *540*
FEATURES
20-1 • Overvoltage and the Lead-Acid Battery *515*

Section IV **Spectrochemical Analysis** *545*

21 Spectroscopic Methods of Analysis: Making Measurements with Light *547*
21A Light: A Particle, a Wave, or Both? *548*
21B How Radiation and Matter Interact *550*
21C Absorbing Light *555*
WEB WORKS *568*
21D Questions and Problems *568*
FEATURES
21-1 • Spectroscopy and the Discovery of Elements *554*
21-2 • Why Is a Red Solution Red? *565*

22 Instruments for Measuring Absorption: Is It a Photometer, a Spectrophotometer, or a Spectrometer? *572*
22A Instrument Components *572*
22B UV/Visible Photometers and Spectrophotometers *586*
22C Infrared Spectrophotometers *590*
WEB WORKS *592*
22D Questions and Problems *592*
FEATURES
22-1 • Gratings Rule *579*

23 Applying Molecular and Atomic Spectroscopic Methods: Shedding More Light on the Subject *594*
23A Applying Ultraviolet/Visible Molecular Absorption Methods *595*
23B Absorbing Infrared Radiation: Good Vibrations *611*
23C Assessing Errors in Spectrophotometry *615*
23D Molecular Luminescence Spectroscopy *616*
23E Molecular Scattering Methods *625*
23F Atomic Spectroscopy *626*
WEB WORKS *631*
23G Questions and Problems *632*

FEATURES
23-1 • Infrared Photometers for Routine Determination of Atmospheric Pollutants *614*
23-2 • How Is Fluorescence Related to Concentration? *620*
23-3 • Use of Fluorescence Probes in Neurobiology: Probing the Enlightened Mind *622*
23-4 • Mercury and Its Determination by Cold-Vapor Atomic Absorption Spectroscopy *628*

Section V **Separation Methods** *637*

24 An Introduction to Analytical Separations *638*

24A Masking *638*
24B Precipitation and Filtration *639*
24C Separating Species by Distillation *639*
24D Separating Solutes by Extraction *640*
24E Separating Ions by Ion Exchange *644*
24F Chromatographic Separations *646*
WEB WORKS *663*
24G Questions and Problems *663*
FEATURES
24-1 • Derivation of Equation 24-2 *641*
24-2 • What Is the Source of the Terms Plate and Plate Height? *658*

25 Gas-Liquid and High-Performance Liquid Chromatography *667*

25A Gas-Liquid Chromatography *667*
25B High-Performance Liquid Chromatography *683*
25C High-Performance Liquid Chromatography versus Gas-Liquid Chromatography *695*
WEB WORKS *698*
25D Questions and Problems *698*
FEATURES
25-1 • Use of Gas Chromatography/Mass Spectrometry to Indentify a Drug Metabolite in Blood *679*
25-2 • Buckyballs: The Chromatographic Separation of Fullerenes *696*

26 Supercritical-Fluid Chromatography, Capillary Electrophoresis, and Capillary Electrochromatography *700*

26A Supercritical-Fluid Chromatography *700*

26B Capillary Electrophoresis *705*
26C Capillary Electrochromatography *715*
WEB WORKS *717*
26D Questions and Problems *718*

Section VI **Selected Methods of Analysis** *719*

27 Selected Methods of Analysis *721*

27A An Introductory Experiment *723*
27B Gravimetric Methods of Analysis *728*
27C Neutralization Titrations *732*
27D Precipitation Titrations *740*
27E Complex-Formation Titrations with EDTA *741*
27F Titrations with Potassium Permanganate *743*
27G Titrations with Iodine *749*
27H Titrations with Sodium Thiosulfate *752*
27I Titrations with Potassium Bromate *755*
27J Potentiometric Methods *757*
27K Electrogravimetric Methods *762*
27L Methods Based on the Absorption of Radiation *764*
27M Atomic Spectroscopy *768*
27N Separating Cations by Ion Exchange *770*
27O Gas-Liquid Chromatography *772*
WEB WORKS *773*

Appendix 1 Solubility Product Constants at 25°C *A-1*
Appendix 2 Acid Dissociation Constants at 25°C *A-3*
Appendix 3 Formation Constants of Complex Compounds at 25°C *A-5*
Appendix 4 Standard and Formal Electrode Potentials *A-7*
Appendix 5 Use of Exponential Numbers and Logarithms *A-10*
Appendix 6 Volumetric Calculations Using Normality and Equivalent Weight *A-15*
Appendix 7 Acronyms and Abbreviations of Significance in Analytical Chemistry *A-23*

Answers to Selected Questions and Problems *A-25*

Glossary *G-1*

Index *I-1*
