

Leaf Development and Canopy Growth

Suranaree University of Technology

31051000604161

Edited by
**Bruce Marshall and
Jeremy A. Roberts**

Contents

1	The evolution of leaf form and function	1
	KARL J. NIKLAS	
1.1	Introduction	1
1.2	The definition of a 'leaf'	2
1.3	Convergence or divergence?	4
1.4	Megaphylls and microphylls	5
1.5	The leaf-stem dichotomy	7
1.6	Computer simulations of the leaf-stem functional dichotomy	9
1.7	Phyllotactic patterns	16
1.8	Mechanical interactions between leaves and stems	23
1.9	Drag-reduction of the canopy	27
1.10	Concluding remarks	32
	References	32
2	Plants as self-organising systems	37
	FEDERICO MAGNANI and JOHN GRACE	
2.1	Introduction	37
2.2	Coordination of stomatal function at the leaf level	38
2.3	Nitrogen acclimation to light at the canopy level	39
2.4	Resource allocation: response to nutrient availability	41
2.5	Resource allocation: response to water relations	44
2.6	Sensory apparatus	47
	2.6.1 Light	47
	2.6.2 Gravity and mechanical sensing	48
	2.6.3 Drought	49
	2.6.4 Sensors and models	49
2.7	Emergent properties and top-down system analysis	50
2.8	Conclusions	52
	References	54
3	Genetic analysis of leaf development and differentiation	59
	TOSHI FOSTER and BRUCE VEIT	
3.1	Introduction	59
3.2	Essential aspects of leaf organisation and development	60
3.3	The initiation of leaves	61
	3.3.1 The role of the shoot apical meristem	62
	3.3.2 Phyllotaxy	66
	3.3.3 Determination of leaf initiation sites	67
	3.3.4 Selection of leaf founder cell populations	70

3.4	Establishment of pattern within the leaf	73
3.4.1	Surgical approaches to pattern formation	73
3.4.2	Analysis of proximal/distal patterning in maize	74
3.4.3	Adaxial/abaxial and lateral patterning of the leaf	75
3.5	Leaf morphogenesis	77
3.6	Compound leaves	79
3.7	Vascular patterning	82
3.8	Cellular differentiation	83
3.8.1	Vascular differentiation	84
3.8.2	Epidermal differentiation	84
3.8.3	Differentiation of ground tissues	85
3.9	Environmental regulation of leaf development and differentiation	86
3.10	Heterophylly in aquatic species	87
3.11	Heteroblastic development	87
3.12	Phase change	88
3.13	Prospects	90
	Acknowledgements	91
	References	91
4	Spatio-temporal variation of leaf growth, development and function	96
	A. WALTER and U. SCHURR	
4.1	Introduction	96
4.1.1	Conceptual framework for leaf growth analysis	96
4.1.2	Technical framework for leaf growth analysis	97
4.2	Growth of the total leaf area	99
4.3	Growth of the single leaf	101
4.4	Spatio-temporal analysis using digital image processing	105
4.4.1	Image sequence analysis	105
4.4.2	Determination of growth rate from digital image sequences	106
4.4.3	Diurnal variation of the spatial pattern of growth rate	110
4.5	Cytological development	111
4.6	Parallel development of morphology and function	113
4.7	Spatio-temporal analysis: prospects and future tasks	113
	Acknowledgements	115
	References	115
5	Plant architecture and light signals	118
	HARRY SMITH	
5.1	Introduction	118
5.2	Shade avoidance	118
5.3	Information in the radiation environment	120
5.3.1	Solar radiation	120
5.3.2	Daylight spectra	121
5.3.3	Interaction with vegetation	121
5.3.4	Reflection signals	122
5.4	Phytochromes and light signal perception	122
5.4.1	Absorption spectra, photoconversions and photoequilibria	122

5.5	Phytochrome response modes	123
5.5.1	Responses to the light pulses	123
5.5.2	Responses to continuous irradiation	124
5.6	Phytochromes in the natural environment	125
5.6.1	Pfr/P vs R:FR	125
5.6.2	Phytochromes as proximity sensors	126
5.7	Nature of shade avoidance	129
5.7.1	Shade avoidance happens quickly	131
5.8	Roles of individual phytochromes in shade avoidance	131
5.8.1	Evidence from mutants	132
5.9	Ecology of shade avoidance	133
5.10	Shade avoidance and canopy architecture in the field	134
5.11	Application of the shade avoidance syndrome	136
5.11.1	Genetic engineering of shade avoidance	136
5.11.2	Transgenic suppression of shade avoidance in the field	139
5.12	The future	140
