CONTENTS

Preface	xi
Abbreviations	xiii
1 Pioneering Industrial Processes Using Homogeneous Transition Metal Catalysts	1
1.1 Carbonylation of Alkenes and Alkynes Catalysed by Metal Carbonyls to Produce Aldehydes, Carboxylic Acids, Esters, and Alcohols	2
1.2 Production of Polyethylene and Polypropylene by Ziegler–Natta Catalysts	3
1.3 Production of Acetaldehyde from Ethylene by the Wacker Process	4
1.4 Preparation of Organotransition Metal Complexes	5
2 Basic Chemistry of Transition Metal Complexes and Their Reaction Patterns	7
2.1 Formation of Transition Metal Complexes	7
2.2 Fundamental Reactions of Transition Metal Complexes; Comparisons of Transition Metal-catalysed Reactions with Grignard Reactions	10
2.2.1 Oxidative Addition	10
2.2.2 Insertion	14
2.2.3 Transmetalation	17
2.2.4 Reductive Elimination	18
2.2.5 Elimination of β -Hydrogen and α -Hydrogen (Dehydrometallation)	19
2.2.6 Nucleophilic Attack on Ligands Coordinated to Transition Metals	20
2.2.7 Termination of the Metal-promoted or catalysed Reactions and a Catalytic Cycle	23
2.3 Effects of Ligands	25

3	Reactions of Organic Halides and Pseudohalides	27
3.1	Reaction Patterns of Aryl, Alkenyl and Benzyl Halides, and Pseudohalides	27
3.2	Cross-coupling with Alkenes (Carbometallation of Alkenes)	33
3.2.1	Intermolecular Reactions	33
3.2.2	Intramolecular Reactions	40
3.3	Reactions with Alkynes	46
3.3.1	Cross-coupling with Terminal Alkynes to Form Alkenyl- and Arylalkynes	46
3.3.2	Reactions of Internal and Terminal Alkynes via Insertion	50
3.4	Cross-coupling via Transmetalation	56
3.4.1	Magnesium Compounds	57
3.4.2	Zinc Compounds	59
3.4.3	Boron Compounds	62
3.4.4	Aluminium and Zirconium Compounds	67
3.4.5	Tin Compounds	68
3.4.6	Silicon Compounds	72
3.4.7	Chromium Compounds	73
3.4.8	Reactions with Dimetallic Compounds	76
3.5	Reactions with C, N, O, S and P Nucleophiles	79
3.6	Carbonylation and Reactions of Acyl Chlorides	85
3.6.1	Preparation of Carboxylic Acids and Their Derivatives	86
3.6.2	Preparation of Aldehydes and Ketones	90
3.6.3	Decarbonylation of Acyl Halides and Aldehydes	92
3.7	Preparation of Biaryls by the Coupling of Arenes with Aryl Halides	94
3.8	Hydrogenolysis with Hydrides	96
4	Reactions of Allylic Compounds	109
4.1	Catalytic and Stoichiometric Reactions of Allylic Compounds	109
4.2	Stoichiometric Reactions of π -Allyl Complexes	111
4.2.1	Reactions of Electrophilic π -Allyl Complexes	111
4.2.2	Reactions of Nucleophilic π -Allyl Complexes	113
4.3	Catalytic Reactions of Allylic Compounds	116
4.3.1	Allylation of Nucleophiles	116
4.3.2	Allylation of C, N and O Nucleophiles	119
4.3.3	Amphiphilic Bis- π -allylpalladium	127
4.3.4	Reactions via Transmetalation	128
4.3.5	Carbonylation	134
4.3.6	Insertion of Alkenes and Alkynes	137
4.3.7	Hydrogenolysis	139
4.3.8	Allyl as a Protecting Group and its Deprotection	142
4.3.9	Preparation of Conjugated Dienes by 1,4-Elimination	146
4.3.10	Pd-catalysed Reactions of Allyl β -Keto Carboxylates, Malonates, and Enol Carbonates	151
4.3.11	Allylic Rearrangement and Isomerization	157

5	Reactions of Conjugated Dienes	169
5.1	Formation of Cyclic Oligomers by Cycloaddition	169
5.2	Formation of Linear Oligomers and Telomers	179
5.3	Bis-metallation, Carbometallation and Hydrometallation	189
6	Reactions of Propargylic Compounds	199
6.1	Classification of Catalytic Reactions Based on Mechanistic Consideration	199
6.2	Reactions via Insertion to the Palladium–sp ² Carbon Bond (Type I)	202
6.2.1	Reactions of Alkenes and Alkynes	202
6.2.2	Carbonylation	203
6.3	Reactions via Transmetallation and Related Reactions (Type II)	211
6.4	Reactions with C, O and N Nucleophiles (Type III)	213
6.5	Hydrogenolysis with Formate and Other Hydrides to Give Allenes and Internal Alkynes (Types II and IV)	219
6.6	Elimination Reactions via Propargylpalladium Intermediates (Type IV)	223
6.7	Miscellaneous Reactions	223
7	Reactions of Alkenes and Alkynes	227
7.1	Carbonylation	227
7.1.1	Preparation of Carboxylic Acids, Esters and Ketones	227
7.1.2	Preparation of Aldehydes (Hydroformylation) and Alcohols	231
7.1.3	Decarbonylation of Aldehydes	237
7.2	Cycloaddition Reactions	238
7.2.1	Cyclotrimerization and Cyclotetramerization of Alkynes	239
7.2.2	Formation of Five- and Six-membered Rings by the Cocyclization of Two Molecules of Alkynes with Other Unsaturated Compounds	244
7.2.3	Synthesis of Cyclopentenones by the Reaction of Alkyne, Alkene and Carbon Monoxide (Pauson–Khand Reaction)	250
7.2.4	Reductive Cyclization of 1,6- and 1,7-Dienes, Diynes, Enynes and Arenes via Zirconacycles and Titanacycles	254
7.2.5	Pd-catalysed Intramolecular Alder-ene Reaction of 1,6- and 1,7-Diynes and Enynes	263
7.2.6	Skeletal Reorganization of 1,6- and 1,7-Enynes Catalysed by Pt, Ru and Pd catalysts	267
7.3	Coupling Reactions	271
7.4	Addition of Main Group Metal Compounds	277
7.4.1	Carbometallation	277
7.4.2	Metalametallation (Bis-metallation)	281
7.4.3	Hydrometallation	284
7.5	Hydroacylation of Alkenes and Alkynes	294
8	Synthetic Reactions via Transition Metal Carbene Complexes	305
8.1	Chemistry of Transition Metal Carbene Complexes	305
8.2	Catalytic Metatheses of Alkenes and Alkynes, and Their Synthetic	

Applications	306
8.2.1 Historical Background and Mechanism of Alkene Metathesis	306
8.2.2 Development of Catalysts for Metathesis	308
8.2.3 Classification of Alkene Metathesis	310
8.2.4 Synthetic Applications of Alkene Metathesis	313
8.2.5 Metathesis of Alkynes and Enynes	322
8.3 Carbonyl Aikenation Reactions via Carbene Complexes	326
8.4 Synthetic Reactions Using Carbene Complexes of Metal Carbonyls as Stoichiometric Reagents	331
8.4.1 Reactions of Electrophilic Carbene Complexes of Cr, Mo, W, Fe and Co	332
8.5 Rh and Pd-catalysed Reactions of Diazo Compounds via Electrophilic Carbene Complexes	340
8.6 Other Reactions	348
9 Protection and Activation by Coordination	355
9.1 Protection and Activation of Alkenes by the Coordination of Iron Carbonyls	355
9.2 Protection and Activation of 1,3-Dienes by the Coordination of Iron Carbonyls	356
9.3 Protection and Activation of Alkynes by the Coordination of Cobalt Carbonyl	366
9.4 Activation of Arenes and Cycloheptatrienes by Coordination of Chromium Carbonyl and Other Metal Complexes	371
9.4.1 Reactions of Carbanions	372
9.4.2 Nucleophilic Substitution of Aromatic Chlorides	376
9.4.3 Lithiation of Aromatic Rings	377
9.4.4 Activation of Benzylic Carbons by Coordination	379
9.4.5 Steric Effect of Coordination	381
9.4.6 Asymmetric Synthesis using Chiral Cr(CO) ₃ -arene Complexes	384
9.4.7 Reactions of Cycloheptatriene Complexes	384
9.4.8 Activation of Arenes by the Coordination of an Osmium Complex	388
10 Catalytic Hydrogenation, Transfer Hydrogenation and Hydrosilylation	393
10.1 Homogeneous Hydrogenation of Alkenes	393
10.2 Asymmetric Reduction of Carbonyl and Imino Groups by Homogeneous Hydrogenation, Transfer Hydrogenation and Hydrosilylation	404
11 Reactions Promoted and Catalysed by Pd(II) Compounds	419
11.1 Oxidative Reactions of Alkenes	420
11.1.1 Reactions with Water	420

11.1.2	Reactions with Oxygen Nucleophiles	423
11.1.3	Reactions with Amines	430
11.1.4	Reactions with Carbon Nucleophiles	431
11.1.5	Oxidative Carbonylation	432
11.2	Difunctionalization of Conjugated Dienes	436
11.3	Reactions of Aromatic Compounds	439
11.4	Synthetic Reactions Based on the Chelation of Heteroatoms	441
11.4.1	<i>ortho</i> -Palladation of Aromatic Compounds	441
11.4.2	Reactions of Allylic Amines	443
11.5	Reactions of Alkynes	444
11.6	Oxidative Carbonylation Reactions	446
11.7	Reactions via Pd(II) Enolates	448
