

Semiconducting Polymers

Chemistry, Physics and Engineering

Edited by
G. Hadziioannou and P. F. van Hutten

Contents

1	Poly(arylene vinylene)s – Synthesis and Applications in Semiconductor Devices 1
	<i>Michael M. Murray and Andrew B. Holmes</i>
1.1	Introduction 1
1.2	Poly(1,4-phenylene vinylene) and its Derivatives 2
1.2.1	The Basic Polymer LED Device Architecture 4
1.2.2	Substituted Poly(phenylene vinylene)s 6
1.2.2.1	Poly(anthrylenevinylene)s 10
1.2.3	Step-Growth Routes to PPV Derivatives 10
1.2.4	PPV Copolymers 11
1.3	Refining the Properties of PPV – Multilayer Devices 13
1.3.1	Multilayer Devices: The Incorporation of Charge-Transporting Layers 14
1.3.2	Electron-Deficient Polymers – Luminescent Transport Layers 16
1.3.2.1	Other Electron-Deficient PPV Derivatives 19
1.3.2.2	Electron-Deficient Aromatic Systems 19
1.4	Full Color Displays – The Search for Blue Emitters 21
1.4.1	Isolated Chromophores – Towards Blue Emission 21
1.4.2	Comb Polymers with Chromophores on the Side-Chain 22
1.5	Chiral PPV – Polarized Emission 23
1.6	Poly(thienylene vinylene)s – A Stable Class of Low-Band-Gap Materials 24
1.6.1	Organic Field Effect Transistors (FETs) 25
1.6.2	Synthesis 26
1.6.3	Aldol Route 27
1.6.4	Ring-Substituted PTV Derivatives 27
1.6.5	Vinylene-Substituted PTV Derivatives – Tuning the Gap 30
1.7	Conclusions and Outlook 31
	Acknowledgements 32
