Contents

Preface v
Preface to the Second Edition vii

Chapter 1 Introduction 1
1.1 The History of Group Testing 1
1.2 A Prototype Problem and Some General Remarks 5
1.3 Some Practical Considerations 7
References 9

Part I Sequential Group Testing Algorithms 11

Chapter 2 General Sequential Algorithms 13
2.1 The Binary Tree Representation of a Sequential Algorithm 13
2.2 The Structure of Group Testing 20
2.3 Li's s-Stage Algorithm 23
2.4 Hwang's Generalized Binary Splitting Algorithm 24
2.5 The Nested Class 27
2.6 (d, n) Algorithms and Merging Algorithms 32
2.7 Number of Group Testing Algorithms 35
References 37

Chapter 3 Sequential Algorithms for Special Cases 39
3.1 Two Disjoint Sets Each Containing Exactly One Defective 39
3.2 An Application to Locating Electrical Shorts 44
3.3 The 2-Defective Case 49
3.4 The 3-Defective Case 54
3.5 When is Individual Testing Minimax? 57
3.6 Identifying a Single Defective with Parallel Tests 60
References 62

Chapter 4 Competitive Group Testing 65
4.1 The First Competitiveness 65
4.2 Bisecting 67
4.3 Doubling 71
4.4 Jumping 73
4.5 The Second Competitiveness 77
4.6 Digging 80
4.7 Tight Bound 82

References 87

Chapter 5 Unreliable Tests **89**
5.1 Ulam's Problem 89
5.2 General Lower and Upper Bounds 95
5.3 Linearly Bounded Lies (1) 100
5.4 The Chip Game 104
5.5 Linearly Bounded Lies (2) 109
5.6 Other Restrictions on Lies 112
References 115

Chapter 6 Complexity Issues **117**
6.1 General Notions 117
6.2 The Prototype Group Testing Problem is in PSPACE 119
6.3 Consistency 120
6.4 Determinacy 122
6.5 On Sample Space $S(n)$ 123
6.6 Learning by Examples 129
References 130

Part II. Nonadaptive Group Testing Algorithms **131**

Chapter 7 Deterministic Designs and Superimposed Codes **133**
7.1 The Matrix Representation 133
7.2 Basic Relations and Bounds 134
7.3 Constant Weight Matrices 140
7.4 General Constructions 145
7.5 The Small d Cases 151
References 159

Chapter 8 Random Designs and Error Tolerance **163**
8.1 Random Matrices 163
8.2 Macula's Error Tolerance d-Disjunct Matrices 167
8.3 q-Error-Tolerance d-Disjunct Matrices 170
References 175

Chapter 9 DNA Applications **177**
9.1 Clone Library Screening 177
9.2 Deterministic Designs 180
9.3 Random Designs 183
9.4 Some Additional Problems 188
References 192

Part III. Extended Group Testing Models **195**

Chapter 10 Multiaccess Channels and Extensions **197**
10.1 Multiaccess Channels 198
10.2 Nonadaptive Algorithms 202
10.3 Two Variations 205
10.4 The k-Channel 208
10.5 Quantitative Channels 211
References 211

Chapter 11 Additive Model and Others **213**
11.1 Symmetric Group Testing 213
11.2 Some Additive Models 215
11.3 A Maximum Model 221
11.4 Some Models for $d = 2$ 224
References 230

Chapter 12 Group Testing on Graphs **233**
12.1 2-Optimal Graphs 233
12.2 Solution of the Du-Hwang Conjecture 236
12.3 Defective Vertices 242
12.4 On Trees 245
12.5 Other Constraints 250
References 250

Part IV. Other Related Searching Problems **253**

Chapter 13 Optimal Search in One Variable **255**
13.1 Midpoint Strategy 255
13.2 Fibonacci Search 257
13.3 Minimum Root Identification 261
References 268

Chapter 14 Unbounded Search **271**
14.1 Introduction 271
14.2 Bentley-Yao Algorithms 273
14.3 Search with Lies 277
14.4 Unbounded Fibonacci Search 279
References 280

Chapter 15 Membership Problems **281**
15.1 Examples 281
15.2 Polyhedral Membership 283
15.3 Boolean Formulas and Decision Trees 285
15.4 Recognition of Graph Properties 289
References 292

Chapter 16 Counterfeit Coins **295**
16.1 One Counterfeit Coin 295
16.2 Two, Three, and More Counterfeit Coins 301
16.3 The All-Equal Problem 302
16.4 Anti-Hadamard Matrices 308
16.5 Coins with Arbitrary Weights 314
References 315

Index **319**
