PREFACE TO THE SECOND EDITION ____ XIX
PREFACE TO THE FIRST EDITION ____ XXI

PART I FUNDAMENTALS 1

CHAPTER 1 INTRODUCTION TO DESIGN ____ 3

1.1 Design ... 3
Machine Design 3
Machine 4
Iteration 5
1.2 A Design Process ... 6
1.3 Problem Formulation and Calculation ... 8
Definition Stage 9
Preliminary Design Stage 9
Detailed Design Stage 10
Documentation Stage 10
1.4 The Engineering Model ... 10
Estimation and First-Order Analysis 10
The Engineering Sketch 11
1.5 Computer-Aided Design and Engineering ... 12
Computer-Aided Design (CAD) 12
Computer-Aided Engineering (CAE) 16
Computational Accuracy 17
1.6 The Engineering Report ... 17
1.7 Factors of Safety and Design Codes ... 18
Factor of Safety 18
Choosing a Safety Factor 19
Design and Safety Codes 21
1.8 Statistical Considerations ... 22
1.9 Units ... 22
Example 1-1 ---- 25
1.10 Summary ... 28
Important Equations Used in this Chapter 28
1.11 References ... 29
1.12 Bibliography ... 29

1.14 Problems 30

CHAPTER 2 MATERIALS AND PROCESSES 31

2.0 Introduction 31

2.1 Material Property Definitions 31
The Tensile Test 33
Ductility and Brittleness 36
The Compression Test 37
The Bending Test 38
The Torsion Test 38
Fatigue Strength and Endurance Limit 40
Impact Resistance 41
Fracture Toughness 43
Creep and Temperature Effects 43

2.2 The Statistical Nature of Material Properties 44

2.3 Homogeneity and Isotropy 45

2.4 Hardness 46
Heat Treatment 47
Surface (Case) Hardening 49
Heat Treating Nonferrous Materials 49
Mechanical Forming and Hardening 50

2.5 Coatings and Surface Treatments 52
Galvanic Action 52
Electroplating 53
Electroless Plating 54
Anodizing 55
Plasma-Sprayed Coatings 55
Chemical Coatings 55

2.6 General Properties of Metals 56
Cast Iron 56
Cast Steels 57
Wrought Steels 57
Steel Numbering Systems 58
Aluminum 61
Titanium 63
Magnesium 64
Copper Alloys 64

2.7 General Properties of Nonmetals 65
Polymers 66
Ceramics 67
Composites 67

2.8 Summary 68
Important Equations Used in this Chapter 69

2.9 References 71

2.10 Bibliography 71
2.11 Problems 72

CHAPTER 3 LOAD DETERMINATION 75

3.0 Introduction 75
3.1 Loading Classes 75
3.2 Free-body Diagrams 78
3.3 Load Analysis 78
Three-Dimensional Analysis 79
Two-Dimensional Analysis 80
Static Load Analysis 81
3.4 Two-Dimensional, Static Loading Case Studies 81
Case Study 1A - Bicycle Brake Lever Loading Analysis 81
Case Study 2A - Hand-Operated Crimping-Tool Loading Analysis 87
Case Study 3A - Automobile Scissors-Jack Loading Analysis 91
3.5 Three-Dimensional, Static Loading Case Study 97
Case Study 4A - Bicycle Brake Arm Loading Analysis 98
3.6 Dynamic Loading Case Study 102
Case Study 5A - Fourbar Linkage Loading Analysis 103
3.7 Vibration Loading 106
Natural Frequency 107
Dynamic Forces 109
Case Study 5B - Fourbar Linkage Dynamic Loading Measurement 110
3.8 Impact Loading 111
Energy Method 112
Example 3-1 115
3.9 Beam Loading 116
Shear and Moment 117
Singularity Functions 118
Example 3-2A 121
Example 3-2B 123
Example 3-3A 125
Example 3-3B 126
Example 3-4 127
Superposition 129
3.10 Summary 130
Important Equations Used in this Chapter 131
3.11 References 132
3.12 Bibliography 133
3.13 Problems 133

CHAPTER 4 STRESS, STRAIN, AND DEFLECTION 143

4.0 Introduction 143

4.1 **Stress** 143

4.2 **Strain** 147

4.3 **Principal Stresses** 147

4.4 **Plane Stress and Plane Strain** 150

Plane Stress 150

Plane Strain 151

4.5 **Mohr's Circles** 151

Example 4-1 ---- 152

Example 4-2 ---- 154

Example 4-3 ---- 155

4.6 **Applied Versus Principal Stresses** 156

4.7 **Axial Tension** 157

4.8 **Direct Shear Stress, Bearing Stress, and Tearout** 158

Direct Shear 158

Direct Bearing 159

Tearout Failure 159

4.9 **Beams and Bending Stresses** 160

Beams in Pure Bending 161

Shear Due to Transverse Loading 164

4.10 **Deflection in Beams** 168

Deflection by Singularity Functions 170

Example 4-4 ---- 170

Example 4-5 ---- 173

Example 4-6 ---- 175

Statically Indeterminate Beams 178

Example 4-7 ---- 178

4.11 **Castigliano's Method** 181

Deflection by Castigliano's Method 182

Finding Redundant Reactions with Castigliano's Method 182

4.12 **Torsion** 183

Example 4-8 ---- 185

4.13 **Combined Stresses** 189

Example 4-9 ---- 189

4.14 **Spring Rates** 192

4.15 **Stress Concentration** 193

Stress Concentration Under Static Loading 195

Stress Concentration Under Dynamic Loading 195

Determining Geometric Stress-Concentration Factors 196

Designing to Avoid Stress Concentrations 198

4.16 **Axial Compression - Columns** 200

Slenderness Ratio 200

Short Columns 201

Long Columns 201

End Conditions 202

Intermediate Columns 204
Example 4-10 ---------- 206
Eccentric Columns 208

4.17 Stresses in Cylinders 212
Thick-Walled Cylinders 212
Thin-Walled Cylinders 213

4.18 Case Studies in Static Stress and Deflection Analysis 214
Case Study 1B - Bicycle Brake Lever Stress and Deflection Analysis 214
Case Study 2B - Crimping-Tool Stress and Deflection Analysis 218
Case Study 3B - Automobile Scissors-Jack Stress and Deflection Analysis 223
Case Study 4B - Bicycle Brake-Arm Stress Analysis 227

4.19 Summary 231
Important Equations Used in this Chapter 234

4.20 References 238

4.21 Bibliography 238

4.22 Problems 239

CHAPTER 5 STATIC FAILURE THEORIES 253

5.0 Introduction 253

5.1 Failure of Ductile Materials Under Static Loading 256
The von Mises-Hencky or Distortion-Energy Theory 256
The Maximum Shear-Stress Theory 263
Maximum Normal-Stress Theory 265
Comparison of Experimental Data with Failure Theories 266
Example 5-1 ---------- 267

5.2 Failure of Brittle Materials Under Static Loading 269
Even and Uneven Materials 270
The Coulomb-Mohr Theory 271
The Modified-Mohr Theory 272
Example 5-2 ---------- 274

5.3 Fracture Mechanics 277
Fracture-Mechanics Theory 280
Fracture Toughness Kc 282
Example 5-3 ---------- 284

5.4 Using The Static-Loading Failure Theories 285

5.5 Case Studies in Static Failure Analysis 287
Case Study 1C - Bicycle Brake Lever Failure Analysis 287
Case Study 2C - Crimping-Tool Failure Analysis 290
Case Study 3C - Automobile Scissors-Jack Failure Analysis 293
Case Study 4C - Bicycle Brake Arm Factors of Safety 296

5.6 Summary 299
Important Equations Used in this Chapter 301

5.7 References 302

5.8 Bibliography 303

5.9 Problems 304

CHAPTER 6 FATIGUE FAILURE THEORIES 317

6.0 Introduction 317
History of Fatigue Failure 317
6.1 Mechanism of Fatigue Failure 319
Crack-Initiation Stage 321
Crack Propagation Stage 321
Fracture 323
6.2 Fatigue-Failure Models 324
Fatigue Regimes 324
The Stress-Life Approach 324
The Strain-Life Approach 326
The LEFM Approach 326
6.3 Machine-Design Considerations 326
6.4 Fatigue Loads 328
Rotating Machinery Loading 328
Service Equipment Loading 329
6.5 Measuring Fatigue Failure Criteria 331
Fully Reversed Stresses 331
Combined Mean and Alternating Stress 338
Fracture-Mechanics Criteria 340
Testing Actual Assemblies 344
6.6 Estimating Fatigue Failure Criteria 345
Estimating the Theoretical Fatigue Strength or Endurance Limit 345
Correction Factors to the Theoretical Fatigue Strength 346
Calculating the Corrected Fatigue Strength 355
Creating Estimated S-N Diagrams 355
Example 6-1 ---------- 357
Example 6-2 ---------- 359
6.7 Notches and Stress Concentrations 361
Notch Sensitivity 361
Example 6-3 ---------- 363
6.8 Residual Stresses 366
6.9 Designing for High-Cycle Fatigue 371
6.10 Designing for Fully Reversed Uniaxial Stresses 372
Design Steps for Fully Reversed Stresses with Uniaxial Loading: 372
Example 6-4 ---------- 374
6.11 Designing for Fluctuating Uniaxial Stresses 380
Creating the Modified-Goodman Diagram 381
Applying Stress-Concentration Effects with Fluctuating Stresses 384
Determining the Safety Factor with Fluctuating Stresses 386
Design Steps for Fluctuating Stresses 389
Example 6-5 ---------- 391

6.12 Designing for Multiaxial Stresses in Fatigue 398
Frequency and Phase Relationships 398
Fully Reversed Simple Multiaxial Stresses 399
Fluctuating Simple Multiaxial Stresses 399
Complex Multiaxial Stresses 401
6.13 A General Approach to High-Cycle Fatigue Design 403
Example 6-6 ----- 404
6.14 A Case Study in Fatigue Design 408
Case Study 6 - Redesign of a Failed Laybar for a Water-Jet Power Loom 409
6.15 Summary 422
Important Equations Used in this Chapter 423
6.16 References 427
6.17 Bibliography 429
6.18 Problems 430

CHAPTER 7 SURFACE FAILURE 443

7.0 Introduction 443
7.1 Surface Geometry 445
7.2 Mating Surfaces 446
7.3 Friction 448
Effect of Roughness on Friction 450
Effect of Velocity on Friction 450
Rolling Friction 450
Effect of Lubricant on Friction 450
7.4 Adhesive Wear 451
The Adhesive Wear Coefficient 454
7.5 Abrasive Wear 455
Abrasive Materials 458
Abrasion-Resistant Materials 458
7.6 Corrosion Wear 459
Corrosion Fatigue 461
Fretting Corrosion 461
7.7 Surface Fatigue 462
7.8 Spherical Contact 465
Contact Pressure and Contact Patch in Spherical Contact 465
Static Stress Distributions in Spherical Contact 467
Example 7-1 ----- 469
7.9 Cylindrical Contact 471
Contact Pressure and Contact Patch in Parallel Cylindrical Contact 471
Static Stress Distributions in Parallel Cylindrical Contact 472
Example 7-2 ----- 474

7.10 General Contact 475
Contact Pressure and Contact Patch in General Contact 475
Stress Distributions in General Contact 476
Example 7-3 477
7.11 Dynamic Contact Stresses 480
Effect of a Sliding Component on Contact Stresses 480
Example 7-4 486
7.12 Surface Fatigue Failure Models—Dynamic Contact 488
7.13 Surface Fatigue Strength 492
Example 7-5 497
7.14 Summary 498
Designing to Avoid Surface Failure 499
Important Equations Used in this Chapter 499
7.15 References 502
7.16 Problems 504

PART II MACHINE DESIGN 509

CHAPTER 8 DESIGN CASE STUDIES 511

8.0 Introduction 511
8.1 Case Study 7—A Portable Air Compressor 512
Case Study 7a - Preliminary Design of a Compressor Drive Train 514
8.2 Case Study 8—A Hay-Bale Lifter 516
Case Study 8a - Preliminary Design of a Winch Lift 516
8.3 Case Study 9—A Cam-Testing Machine 520
Case Study 9a - Preliminary Design of a Cam Dynamic Test Fixture (CDTF) 521
8.4 Summary 526
8.5 References 527
8.6 Design Projects 527

CHAPTER 9 SHAFTS, KEYS, AND COUPLINGS 539

9.0 Introduction 539
9.1 Shaft Loads 539
9.2 Attachments and Stress Concentrations 541
9.3 Shaft Materials 543
9.4 Shaft Power 544
9.5 Shaft Loads 544
9.6 Shaft Stresses 545
9.7 Shaft Failure in Combined Loading 546

9.8 Shaft Design 546
General Considerations 547
Design for Fully Reversed Bending and Steady Torsion 548
Design for Fluctuating Bending and Fluctuating Torsion 550
Example 9-1 ----- 551
Example 9-2 ----- 556
9.9 Shaft Deflection 558
Shafts as Beams 558
Shafts as Torsion Bars 559
Example 9-3 ----- 560
9.10 Keys and Keyways 562
Parallel Keys 562
Tapered Keys 564
Woodruff Keys 564
Stresses in Keys 564
Key Materials 565
Key Design 566
Stress Concentrations in Keyways 566
Example 9-4 ----- 567
9.11 Splines 571
9.12 Interference Fits 573
Stresses in Interference Fits 573
Stress Concentration in Interference Fits 574
Fretting Corrosion 575
Example 9-5 ----- 576
9.13 Flywheel Design 579
Energy Variation in a Rotating System 580
Example 9-6 ----- 581
Determining the Flywheel Inertia 583
Stresses in Flywheels 585
Failure Criteria 586
Example 9-7 ----- 586
9.14 Critical Speeds of Shafts 588
Lateral Vibration of Shafts and Beams—Rayleigh's Method 591
Shaft Whirl 593
Torsional Vibration 595
Two Disks on a Common Shaft 596
Multiple Disks on a Common Shaft 597
Controlling Torsional Vibrations 598
Example 9-8 ----- 598
9.15 Couplings 600
Rigid Couplings 601
Compliant Couplings 602
9.16 Case Study 604
Designing Driveshafts for a Portable Air Compressor 604
Case Study 7B - Preliminary Design of Shafts for a Compressor Drive Train 605

9.17 Summary 609
Important Equations Used in this Chapter 610
9.18 References 611
9.19 Problems 612

CHAPTER 10 BEARINGS AND LUBRICATION 619

10.0 Introduction 619
A Caveat 621
10.1 Lubricants 622
10.2 Viscosity 624
10.3 Types of Lubrication 624
Full-Film Lubrication 626
Boundary Lubrication 629
10.4 Material Combinations in Sliding Bearings 629
10.5 Hydrodynamic Lubrication Theory 631
Petroff's Equation for No-Load Torque 631
Reynolds' Equation for Eccentric Journal Bearings 632
Torque and Power Losses in Journal Bearings 638
10.6 Design of Hydrodynamic Bearings 639
Design Load Factor—The Ocvirk Number 640
Design Procedures 640
Example 10-1 643
10.7 Nonconforming Contacts 646
Example 10-2 651
10.8 Rolling-element bearings 653
Comparison of Rolling and Sliding Bearings 654
Types of Rolling-Element Bearings 655
10.9 Failure of Rolling-element bearings 659
10.10 Selection of Rolling-element bearings 659
Basic Dynamic Load Rating C 659
Basic Static Load Rating C0 660
Combined Radial and Thrust Loads 661
Calculation Procedures 661
Example 10-3 664
Example 10-4 665
10.11 Bearing Mounting Details 666
10.12 Special Bearings 667
10.13 Case Study 668
Case Study 9b - Design of Hydrodynamic Bearings for a Cam Test Fixture. 669
10.14 Summary 672
Important Equations Used in this Chapter 673

10.15 References 676
10.16 Problems 677

CHAPTER 11 SPUR GEARS 683

11.0 Introduction 683
11.1 Gear Tooth Theory 685
The Fundamental Law of Gearing 685
The Involute Tooth Form 687
Pressure Angle 688
Mesh Geometry 688
Rack and Pinion 689
Changing Center Distance 690
Backlash 691
Relative Tooth Motion 692
11.2 Gear Tooth Nomenclature 692
11.3 Interference and Undercutting 694
Unequal-Addendum Tooth Forms 696
11.4 Contact Ratio 697
Example 11-1 698
11.5 Gear Trains 700
Simple Gear Trains 700
Compound Gear Trains 700
Reverted Compound Trains 701
Example 11-2 702
Epicyclic or Planetary Gear Trains 703
Example 11-3 705
11.6 Gear Manufacturing 706
Forming Gear Teeth 706
Machining 707
Roughing Processes 707
Finishing Processes 709
Gear Quality 709
11.7 Loading on Spur Gears 710
Example 11-4 712
11.8 Stresses in Spur Gears 713
Bending Stresses 713
Example 11-5 722
Surface Stresses 723
Example 11-6 726
11.9 Gear Materials 728
Material Strengths 729
AGMA Bending-Fatigue Strengths for Gear Materials 730
AGMA Surface-Fatigue Strengths for Gear Materials 733
Example 11-7 735

11.10 Lubrication of Gearing 739
11.11 Design of Spur Gears 739
11.12 Case Study 741
Case Study 7C - Design of Spur Gears for a Compressor Drive Train 741
11.13 Summary 747
Important Equations Used in this Chapter 748
11.14 References 749
11.15 Problems 749

CHAPTER 12 HELICAL, BEVEL, AND WORM GEARS 755

12.0 Introduction 755
12.1 Helical Gears 755
Helical Gear Geometry 758
Helical Gear Forces 759
Virtual Number of Teeth 759
Contact Ratios 760
Stresses in Helical Gears 761
Example 12-1 764
12.2 Bevel Gears 769
Bevel Gear Geometry and Nomenclature 770
Bevel Gear Mounting 771
Forces on Bevel Gears 771
Stresses in Bevel Gears 772
Example 12-2 773
12.3 Wormsets 778
Materials for Wormsets 779
Lubrication in Wormsets 780
Forces in Wormsets 780
Wormset Geometry 780
Rating Methods 781
A Design Procedure for Wormsets 783
12.4 Case Study 784
Case Study 8B - Design of a Wormset Speed Reducer for a Winch Lift Repeated 784 785
12.5 Summary 787
Important Equations Used in this Chapter 789
12.6 References 792
12.7 Problems 793

CHAPTER 13 SPRING DESIGN 797

13.0 Introduction 797

13.1 Spring Rate 797

13.2 Spring Configurations 800

13.3 Spring Materials 802
Spring Wire 803
Flat Spring Stock 805

13.4 Helical Compression Springs 808
Spring Lengths 808
End Details 809
Active Coils 809
Spring Index 810
Spring Deflection 810
Spring Rate 810
Stresses in Helical Compression Spring Coils 811
Residual Stresses 812
Buckling of Compression Springs 813
Compression-Spring Surge 814
Allowable Strengths for Compression Springs 815
The Torsional-Shear S-N Diagram for Spring Wire 817
Example 13-1 ----- 817
The Modified-Goodman Diagram for Spring Wire 818
Example 13-2 ----- 819

13.5 Designing Helical Compression Springs for Static Loading 821
Example 13-3 ----- 822

13.6 Designing Helical Compression Springs for Fatigue Loading 826
Example 13-4 ----- 829

13.7 Helical Extension Springs 834
Active Coils in Extension Springs 834
Spring Rate of Extension Springs 835
Spring Index of Extension Springs 835
Coil Preload in Extension Springs 835
Deflection of Extension Springs 835
Coil Stresses in Extension Springs 836
End Stresses in Extension Springs 836
Surging in Extension Springs 837
Material Strengths for Extension Springs 837
Design of Helical Extension Springs 837
Example 13-5 ----- 839

13.8 Helical Torsion Springs 846

Terminology for Torsion Springs 847
Number of Coils in Torsion Springs 847
Deflection of Torsion Springs 847
Spring Rate of Torsion Springs 848
Coil Closure 848
Coil Stresses in Torsion Springs 848
Material Parameters for Torsion Springs 849
Safety Factors for Torsion Springs 850
Designing Helical Torsion Springs 851
Example 13-6 ---------- 851

13.9 Belleville Spring Washers 854

Load-Deflection Function for Belleville Washers 856
Stresses in Belleville Washers 857
Static Loading of Belleville Washers 857
Dynamic Loading 858
Stacking Springs 859
Designing Belleville Springs 859
Example 13-7 ---------- 859

13.10 Case Studies 861

Designing a Return Spring for a Cam-Testing Machine 862
Case Study 9C - Design of a Return-Spring for a Cam-Follower Arm 862

13.11 Summary 866

Important Equations Used in this Chapter 867

13.12 References 870

13.13 Problems 871

CHAPTER 14 SCREWS AND FASTENERS 875

14.0 Introduction 875

14.1 Standard Thread Forms 877

Tensile Stress Area 879
Standard Thread Dimensions 880

14.2 Power Screws 880

Square, Acme, and Buttress Threads 880
Power Screw Application 882
Power Screw Force and Torque Analysis 883
Friction Coefficients 887
Self-Locking and Back-Driving of Power Screws 887
Screw Efficiency 888
Ball Screws 889
Example 14-1 ---------- 890

14.3 Stresses in Threads 892

Axial Stress 892
Shear Stress 893
Torsional Stress 894

14.4 Types of Screw Fasteners 894
Classification by Intended Use 894
Classification by Thread Type 895
Classification by Head Style 895
Nuts and Washers 897
14.5 Manufacturing Fasteners 898
14.6 Strengths of Standard Bolts and Machine Screws 900
14.7 Preloaded Fasteners in Tension 900
Preloaded Bolts Under Static Loading 903
Example 14-2 906
Preloaded Bolts Under Dynamic Loading 909
Example 14-3 910
14.8 Determining the Joint Stiffness Factor 915
Gasketed Joints 917
Example 14-4 918
14.9 Controlling Preload 922
The Turn-of-the-Nut Method 923
Torque-Limited Fasteners 923
Load-Indicating Washers 923
Torsional Stress Due to Torquing of Bolts 924
Example 14-5 924
14.10 Fasteners in Shear 925
Dowel Pins 927
Centroids of Fastener Groups 929
Determining Shear Loads on Fasteners 929
Example 14-6 931
14.11 Case Studies 932
Designing Headbolts for an Air Compressor 932
Case Study 7D - Design of the Headbolts for an Air Compressor 932
14.12 Summary 937
Important Equations Used in this Chapter 938
14.13 References 940
14.14 Bibliography 941
14.15 Problems 941
CHAPTER 15 CLUTCHES AND BRAKES 947
15.0 Introduction 947
15.1 Types of Brakes and Clutches 949
15.2 Clutch/Brake Selection and Specification 955
15.3 Clutch and Brake Materials 956

15.4 Disk Clutches 956
Uniform Pressure 957
Uniform Wear 958
Example 15-1 ----- 959
15.5 Disk Brakes 960
15.6 Drum Brakes 961
Short-Shoe External Drum Brakes 962
Example 15-2 ----- 963
Long-Shoe External Drum Brakes 964
Example 15-3 ----- 967
Long-Shoe Internal Drum Brakes 969
15.7 Summary 969
Important Equations Used in this Chapter 971
15.8 References 972
15.9 Bibliography 972
15.10 Problems 973

APPENDIX A CROSS-SECTIONAL PROPERTIES ____ 977

APPENDIX B MASS PROPERTIES ____ 979

APPENDIX C MATERIAL PROPERTIES ____ 981
