R. Del Delumyea*

CONTENTS

<i>Preface</i>		<i>xi</i>
<i>To the Student</i>		<i>xv</i>
Part 1	Fundamentals for Studies of Environmental Chemistry	
	Introduction to Laboratory Work	1
Experiment 1	Statistical Treatment of Raw Data and Properties of Natural Waters	17
Experiment 2	Collection and Preservation of Water and Sediment Samples: Inorganic and Organic Profiles of Soil and Sediment Cores	37
Part 2	Inorganic Chemical Properties of Natural Waters and Wastewaters	
Experiment 3	The pH and Buffer Capacity of Environmental Waters	47
Experiment 4	Alkalinity of Streams and Lakes	61
Experiment 5	Use of Ion-Selective Electrodes to Determine Trace Levels of Ions in Natural Waters	69
Experiment 6	Conductivity of Various Waters	81
Experiment 7	Determination of Chloride Ion in Natural Waters: A Comparison of Methods	91

Contents

Experiment 8	Determination of the Hardness of Natural Waters A: Conventional EDTA Complexometric Titration B: Commercial Test Kit Determination	101
Experiment 9	Spectrophotometry, Colorimetry, and Absorption Spectra: Determining Iron and Manganese in Natural Waters and Sediments	107
Experiment 10	Determination of Trace Amounts of Metals by Atomic Absorption Spectrometry	123
Experiment 11	Removal of Chromium(VI) from Wastewater at the Part Per Million Level	133
Experiment 12	Solubility of Oxygen in Pure and Natural Waters and Its Dependence on Temperature and Salinity	141
Experiment 13	Spectrophotometric Determination of the Chemical Oxygen Demand of Natural Waters and Wastewaters Using a Standard Method	149
Part 3	Organic Chemical Properties of Natural Waters and Wastewaters	
Experiment 14*	Determination of Oils and Greases by Soxhlet Extraction	155
Experiment 15*	Fluorimetric Determination of Polycyclic Aromatic Hydrocarbons	165

Experiment 16	Determination of the Octanol/Water Partition Coefficients for Organic Pollutants of Varying Hydrophobic/Hydrophilic Character	173
Experiment 17	Determination of Oil-Spill Sources Using Pattern Recognition of Known Petroleum Product Gas Chromatograms	179
Experiment 18*	Analysis of Environmental Hydrocarbons Using Simple Extraction and Analysis by Flame Ionization Detection Gas Chromatography	189
Experiment 19	Kinetics of the Decomposition of Pollutants in the Environment with an Application to Plasticizers	203
Experiment 20	Properties of Detergents: Surface Tension Measurement of Critical Micelle Concentration	209

Part 4 Air Sampling and Analysis

Experiment 21	Introduction to Air Sampling: Particulates in Urban Air	219
Experiment 22	Determination of the Concentration of Carbon Dioxide in the Atmosphere	229
Experiment 23	Collection and Chemistry of Acid Rain	237

<i>Glossary</i>	243
------------------------	-----

<i>Acronyms</i>	261
