Yngve Öhrn

CONTENTS

Preface	ix
1 Introduction	1
2 The Group Concept	3
2.1 Subgroups, 9	
2.2 Conjugate Classes, 13	
2.3 Mappings of Groups, 14	
3 Preliminaries about the Symmetric Group	19
3.1 Cycle Structure, 19	
3.2 Cayley's Theorem, 22	
4 Algebra Structure	25
4.1 Group Algebra, 25	
4.2 Schur's Lemma, 38	
4.3 Convolution Relations, 40	
4.4 Spectral Analysis of Representations, 43	
4.5 The Character Table, 45	
4.6 Splitting of the Group Algebra, 46	
5 Outer and Inner Direct Products	51
6 Subduced and Induced Representations	55
7 Point Groups	59
7.1 Notations, 59	
8 Character Tables of Some Point Groups	63
9 Connection to Quantum Chemistry	75
9.1 The Hydrogen Atom, 75	

9.2	Kinetic Energy in Spherical Polar Coordinates, 80	
9.3	Electron Spin, 88	
9.4	Many-Electron Wavefunctions and Antisymmetry, 89	
9.5	Many-Electron Atoms, 95	
9.6	Simple Molecular Orbitals for Diatomics, 104	
10	The Symmetric Group	113
10.1	Preliminaries, 113	
10.2	Characters, 114	
10.3	The Orthogonal Irreps, 117	
11	Groups of Constants of Motion	123
11.1	Group Elements Acting on a Function, 125	
11.2	Integrals and Symmetry, 127	
11.3	Symmetry and the Secular Problem, 130	
11.4	Electron Spin and the Symmetric Group, 135	
11.5	Orbital Symmetry, 137	
12	Coupling of Identical Particles in a Field of Given Symmetry	145
12.1	Combined Permutation and Point Group Symmetry, 145	
12.2	Term Symbols and Symmetry, 149	
12.3	Point Groups as Subgroups of $SO(3)$, 151	
12.4	Spin-Orbit Coupling, 155	
13	Molecular Orbital Theory	161
13.1	Frontier Orbitals and the Noncrossing Rule, 162	
13.2	The Hartree-Fock Approximation, 166	
13.3	Interpretation of the Invariant ρ , 171	
13.4	Closed-Shell Systems, 173	
13.5	Open-Shell Systems, 176	
13.6	Molecular Properties, 178	
13.7	Separation of Core and Valence States, 179	
13.8	Zero-Differential Overlap, 182	
14	Electron Correlation	195
14.1	Configuration Interaction, 195	

14.2 Detailed Example of Various Approximate Methods Applied to Electronic Spectra, 203	
15 Molecular Vibrations	211
15.1 Symmetry Modes of the Water Molecule, 211	
15.2 Symmetry Modes of Square Planar Molecules, 214	
15.3 Normal Modes, 220	
16 Space Groups	227
16.1 Introduction, 227	
16.2 Translational symmetry, 227	
16.3 Translational and point group symmetry, 228	
16.4 Reciprocal space and Bloch functions, 233	
16.5 Construction of symmetry functions, 237	
17 Continuous Groups	245
17.1 Definitions, 245	
17.2 Subgroups, 248	
17.3 Lie Groups, 249	
17.4 Matrix Groups, 250	
17.5 Infinitesimal Transformations, 251	
17.6 The Unitary Group, 257	
17.7 Lie Algebras, 269	
18 Example of a Noncompact Group and Algebra	273
18.1 Representation Theory of $so(3)$ and $so(2,1)$, 273	
18.2 The Hydrogen Atom and the Isotropic Linear Harmonic Oscillator, 278	
Bibliography	283
Problems	285
Index	289
