Contents

1. Introduction 3

1.1 Overview 3
1.2 Organization of the Book 4
1.3 The Structural Model 5
1.4 Recommended Additional Reading 11

2. Single Degree of Freedom Linear System Response 12

2.1 Overview 12
2.2 Free Vibration 14
2.3 Special Cases of Forced Response 19
2.4 Convolution Integral Solution for Response 27
2.5 State Space Solution for Response 40
2.6 Numerical Solution for Response Using Newmark β-Method 46
2.7 Numerical Solution for Response Using Wilson θ-Method 53
2.8 Numerical Solution for State Space Response Using the Direct Integration 58
2.9 Sensitivity Analysis of Response 67
2.10 Structural Dynamics from an Energy Conservation Perspective 74

3. Two Degrees of Freedom Linear System Response 86

3.1 Overview 86
3.2 Undamped Free Vibration 88
3.3 Undamped Free Vibration Using the Normal Mode Method 95
3.4 Undamped Response Using the Normal Mode Method 99
3.5 Damped Response with Rayleigh Damping Using the Normal Mode Method 103
3.6 State Space Solution for Response 109
3.7 Numerical Solution for Response Using the Discretization Method 114
3.8 Numerical Solution for State Space Response Using the Direct Integration Method 121
3.9 Sensitivity Analysis of Natural Frequencies and Mode Shapes 125
3.10 Sensitivity Analysis of Response 129

4. Multi–Degree of Freedom Linear System Response 134

4.1 Overview 134
4.2 The Mass Matrix 136
4.3 Undamped Free Vibration Using the Normal Mode Method 147
4.4 Orthogonality of Mode Shapes 157
4.5 Undamped Response Using the Normal Mode Method 164

4.6 Damped Response with Rayleigh Damping Using the Normal Mode Method 171
4.7 Damped Response with Caughy Damping Using the Normal Mode Method 178
4.8 Damped Response with Penzien–Wilson Damping Using the Normal Mode Method 182
4.9 Damped Response with NonProportional Damping 189
4.10 Damped Response Using the State Space Method 193
4.11 Damped Response Using the Normal Mode Method and the State Space Formulation 196
4.12 Sensitivity Analysis of Natural Frequencies 201
4.13 Sensitivity Analysis of Mode Shapes 204
4.14 Sensitivity Analysis of Response 210
4.15 Problem Size Reduction Methods 210

5. Response Spectra Analysis 219

5.1 Overview 219
5.2 Single Degree of Freedom Response 220
5.3 Design Earthquake Response Spectra 230
5.4 Fundamental Mode Response 239
5.5 Response Using Two Normal Modes of Vibration 252
5.6 Response of a Multi–Degree of Freedom System 266
5.7 Three-Dimensional Multi–Degree of Freedom Response 270

6. Linear Time History Analysis 276

6.1 Overview 276
6.2 Earthquake Ground Motion 277
6.3 Normal Mode Method with Proportional Damping 281
6.4 NonProportional Damping 287
6.5 Problem Size Reduction Using Static Condensation 290
6.6 Problem Size Reduction Using Dynamic Condensation 300
6.7 State Space Response 305
6.8 State Space Reduction 311

7. Nonlinear Time History Analysis 321

7.1 Overview 321
7.2 Single Degree of Freedom Response with Nonlinear Stiffness 324
7.3 Multi–Degree of Freedom Response with Nonlinear Stiffness 344
7.4 Inelastic Displacement and Force Analogy Method 365
7.5 Single Degree of Freedom Response Using the Force Analogy Method 378
7.6 Multi–Degree of Freedom Response Using the Force Analogy Method 386
7.7 Inelastic Dynamic State Space Response Using the Force Analogy Method 393
7.8 Inelastic Dynamic Response with State Space Reduction 401

8. Base Isolation 413

8.1 Overview 413
8.2 Introduction to a Base-Isolated System 417
8.3 Soft-Story Frame 423
8.4 Base Isolators 439
8.5 Design of a Base-Isolated Structure 448
8.6 Response Spectra Analysis of a Linear Elastic Base-Isolated Structure 459
8.7 Response Spectra Analysis of a Nonlinear Base-Isolated Structure 470
8.8 Time History Analysis of a Base-Isolated Structure 473

9. Manufactured Viscous Dampers 483

9.1 Overview 483
9.2 Manufactured Dampers with Linear Viscous Damping 489
9.3 Introduction to manufactured viscous dampers 497
9.4 Preliminary Design of a Manufactured Damping Structure 502
9.5 Forced Response of an SDOF System Using Numerical Discretization 509
9.6 Forced Response of an SDOF System Using Direct Integration 517
9.7 Forced Response of an MDOF System with Manufactured Viscous Dampers 521

10. Structural Control 531

10.1 Overview 531
10.2 Structural Control of an SDOF System 531
10.3 Structural Control of a 2DOF System 534
10.4 Structural Control of an MDOF System and Numerical Solution for Response 536
10.5 Optimal Linear Control without External Force—Continuous Time 540
10.6 Optimal Linear Control without External Force—Discrete Time 543
10.7 Optimal Linear Control of Earthquake-Induced Elastic Response 556
10.8 Optimal Linear Control of Earthquake-Induced Inelastic Response 561
10.9 Optimal Linear Control of Inelastic Structure with State Space Reduction 569
10.10 Nonlinear Control of Elastic Structure for Earthquakes 573
10.11 Nonlinear Control of Inelastic Structure for Earthquakes 575

Appendix 577
