

# ANALYTIC FEEDBACK SYSTEM DESIGN

## An Interpolation Approach

**PETER  
DORATO**

# Contents

|          |  |           |
|----------|--|-----------|
| <b>1</b> | <b>Introduction</b>                      | <b>1</b>  |
| 1.1      | Analytical versus Trial-and-Error Design | 1         |
| 1.2      | Some Analytical Design Methods           | 3         |
| 1.3      | Internal Stability                       | 5         |
| 1.4      | The Interpolation Approach               | 7         |
| 1.5      | Modeling and Numerical Examples          | 8         |
| 1.6      | Prerequisites                            | 9         |
| <b>2</b> | <b>Design with Stable Compensators</b>   | <b>11</b> |
| 2.1      | Introduction                             | 11        |
| 2.2      | Parameterization with Units              | 12        |
| 2.3      | Design with Stable Compensators          | 24        |
| 2.4      | Notes and References                     | 26        |
| 2.5      | Problems                                 | 27        |
| <b>3</b> | <b>Design with Unstable Compensators</b> | <b>29</b> |
| 3.1      | Introduction                             | 29        |
| 3.2      | Q-Parameter Design                       | 29        |
| 3.3      | Youla Parameterization                   | 39        |
| 3.4      | Internal Model Control                   | 40        |
| 3.5      | Notes and References                     | 42        |
| 3.6      | Problems                                 | 43        |
| <b>4</b> | <b>Digital Control Design</b>            | <b>47</b> |
| 4.1      | Introduction                             | 47        |
| 4.2      | Internal Stability                       | 48        |
| 4.3      | Deadbeat Response                        | 49        |
| 4.4      | Digital Unit-Parameter Design            | 50        |
