Preface	xi
----------------	-----------

1 Principles of Telecommunications Network Architecture	1
--	----------

1.1 Broadband Networks	1
1.1.1 Basic ATM Protocols	2
1.1.2 Leaky Bucket Model	8
1.1.3 Cooperating Leaky Bucket Model	10
1.1.4 Compression Technology	11
1.1.5 Multimedia Virtual Circuit Model	14
1.2 Rate-Based Congestion Control Schemes for ABR Service in ATM Networks	17
1.2.1 Services in the ATM Network	18
1.2.2 Congestion Control for ABR Service	18
1.2.3 Rate-Based Control Schemes	20
1.3 Multiple Access Protocols for Wireless ATM Networks	21
1.3.1 Wireless Networks	22
1.3.2 Wireless ATM	24
1.3.2.1 ATM Services	24
1.3.2.2 Wireless Integration	25
1.3.3 Multiple-Access Protocol	26
1.3.3.1 Fixed Assignment	26

1.3.3.2 Random Assignment	26
1.3.3.3 Demand Assignment	27
1.3.4 Demand Assignment Multiple-Access (DAMA) Protocols	28
2 Architecture of Telecommunications and Wireless Networks	33
<hr/>	
2.1 Multimedia Network Architecture	33
2.1.1 Design of the Multimedia Conference System	36
2.2 Congestion Control for ABR Traffic in ATM Networks	41
2.2.1 FECN Rate-Control Method	43
2.2.2 BECN Rate-Control Method	45
2.2.3 PRCA	47
2.2.4 Beat Down Problem	47
2.2.5 An Adaptive Congestion Control Scheme	48
2.3 Congestion Control Mechanisms in the Intelligent Network	52
2.4 Guaranteed QoS in Wireless ATM Networks	59
2.4.1 Mobile Quality of Service (M-QoS)	61
2.4.2 Architectures of High-Speed Wireless ATM Networks	63
2.4.2.1 Architecture Based on Distributed Control: AT&T™'s Architecture	63
2.4.2.2 Architecture Based on Hierarchical Organization: NEC™'s Wireless ATM Architecture	66
2.4.2.3 Architecture Based on Intelligent Network: British Telecom™'s Architecture	66
2.4.2.4 Cambridge Wireless ATM LAN Architecture	69
2.4.2.5 LAN Emulation Model for Wireless ATM	71
2.4.2.6 The Mobile Handling Backbone (MHB)	77
3 Models of Telecommunications Networks	81
<hr/>	
3.1 Synchronization in Multimedia Systems	81
3.1.1 The Architecture of DMIS	84
3.1.2 Multimedia Synchronization Scheme	85
3.1.2.1 Concept Model Description of Media Synchronization	86
3.1.2.2 Playout Schedule and Synchronization	88
3.1.2.3 Buffer Configuration at the Client Side	91
3.1.2.4 Determination of Control Time in Stored Data Retrieval	94
3.1.2.5 Synchronization in DMIS	96

3.1.3 Buffer Control System	97
3.2 User Mobility Management in Wireless Networks	101
3.2.1 <i>The Architecture of the PCS Network</i>	103
3.2.1.1 Access Network	103
3.2.1.2 Transport Network	104
3.2.1.3 Intelligent Network (IN)	104
3.2.2 Location Database Management in the PCS Network	108
3.2.2.1 Location Management Strategies Before the PCS Network	108
3.2.2.2 Distributed Location Database for the PCS Network	109
3.2.3 Placement of a Hierarchical Database	111
3.3 Tracking Strategy for Personal Communications Networks	113
3.3.1 Structure of PCNs	113
3.3.2 Locating Strategies in PCN	115
3.3.3 Tracking Strategy	116
3.4 Location Management Schemes for Mobile Communications	125
3.4.1 The Two-Scope Concept	128
3.4.1.1 Global Scope	128
3.4.1.2 Local Scope	130
3.4.2 Location Management in Local Scope	130
3.4.2.1 Method of Static Partitioning and Method of Dynamic Neighbor Zone	131
3.4.2.2 The Model	132
3.4.2.3 Performance Evaluation of the Dynamic Neighbor Zone Method	133
3.4.2.4 Combining the Limited Broadcast and Forwarding Pointer Schemes	134
3.4.2.5 Impact of Zone Size on Performance	136
3.4.3 Location Management in the Global Scope	136
3.4.3.1 The Model	138
3.4.3.2 Comparison of Basic Schemes	139
3.4.3.3 The Compound Scheme	140
3.4.3.4 The Environment of the "Friend Network"	142

4	Routing Algorithms	145
4.1	Finding Minimum Cost Multicast Trees with Bounded Path Delay	145
4.1.1	DDBMA	148
4.2	Multicast and Other Routing Algorithms	159
4.2.1	Multicast Routing Algorithms Reducing Congestion	161
4.2.1.1	The Algorithm	162
4.2.1.2	Cost and Performance Analysis	169
4.2.1.3	Applying the Multicast Routing Algorithm to a Multipoint Connection in Broadband Networks	174
4.3	Routing in Wireless Personal Networks	175
4.3.1	The Architecture and Model of a Wireless Communications Network	177
4.3.2	The ESP and DSDSP Routing Algorithms	182
4.3.2.1	The ESP Routing Algorithm	184
4.3.2.2	The DSDSP Routing Algorithm	188
4.3.2.3	A Comparison between the ESP and DSDSP Routing Algorithms	191
4.4	MH Protocols for the Internet	193
4.4.1	VIP	193
4.4.2	LSRIP	194
4.4.3	IETF-MIP	195
4.4.4	A Comparison between Mobile IPs	196
4.4.5	Scalable Mobile Host IP (SMIP) Protocol	196
4.4.5.1	HA to FA Inside the Same Area	198
4.4.5.2	HA to FA in the Other Area	199
4.4.5.3	Moving Inside the Other Area	202
4.4.5.4	Moving from the Outside Area to a New Outside Area	204
4.4.5.5	SMIP Packet Format	205
4.4.5.6	SMIP Notification Message Format	207
4.4.5.7	SMIP Authentication	207
4.4.5.8	The Popup Method	208
4.5	Location Update and Routing Schemes for the Mobile Computing Environment	209
4.5.1	Locality Traffic Pattern	213
4.5.2	Scheme Description	215
4.5.3	Architecture	217

4.5.3.1 Mobile Host (MH)	217
4.5.3.2 Foreign Agent (FA)	218
4.5.3.3 Home Agent (HA)	219
4.5.3.4 Redirection Agent (OSPF Area BR)	220
4.5.4 Packet Routing	220
4.5.5 MH Movements	223
5 Resource Allocation in Multimedia Wireless Networks	225
5.1 Dynamic Channel Assignment in Cellular Mobile Communications Networks	225
5.1.1 Cochannel Information Based Dynamic Channel Assignment (CDCA) Strategy	232
5.1.2 Group Dynamic Channel Assignment (GDCA) Strategy for Multichannel Traffic	238
5.2 Distributed Dynamic Channel Assignment (DDCA) in Cellular Mobile Communication Networks	242
5.2.1 Centralized DCA Scheme	243
5.2.2 DDCA	244
5.2.3 Priority-Based DDCA (PDCA)	246
5.3 The HCA Method for Wireless Communication Networks	251
5.3.1 Definition of the Problem	252
5.3.2 Nominal Channel Assignment Strategy and Channel Slot Order	255
5.3.2.1 Frequency Exhaustive and Requirement Exhaustive Strategies	255
5.3.2.2 Importance of Nominal Channel Slot Order	257
5.3.3 Nominal Channel Allocation in the Network Planning Stage	258
5.3.4 Dynamic Channel Allocation in the Network Running Stage	263
5.4 QoS in Wireless Microcellular Networks	265
5.4.1 Multimedia Traffic in Microcellular Networks	267
5.4.2 Resource Allocation in Microcellular Networks	268
5.4.2.1 Admission Threshold Based Scheme	269
5.4.2.2 Resource Sharing Based Scheme	270
5.4.2.3 Resource Reservation (RR) Based Scheme	271
5.4.3 RR with Renegotiation	273
