# DETAILED CONTENTS

## PREFACE

xiii

## 1

## GENETICS: AN INTRODUCTION 1

### THE BRANCHES OF GENETICS 2

### GENETICISTS AND GENETICS RESEARCH 3

What Do Geneticists Do? 3

What Are Basic and Applied Research? 3

What Organisms Are Suitable for Genetic Experimentation? 5

### CELLULAR REPRODUCTION IN EUKARYOTES: MITOSIS AND MEIOSIS 8

Chromosome Complement of Eukaryotes 8

Asexual and Sexual Reproduction 9

Mitosis 10

Meiosis 15

## 2

## MENDELIAN GENETICS 25

### GENOTYPE AND PHENOTYPE 26

### MENDEL'S EXPERIMENTAL DESIGN 27

### MONOHYBRID CROSSES AND MENDEL'S PRINCIPLE OF SEGREGATION 28

The Principle of Segregation 32

Representing Crosses with a Branch Diagram 33

Confirming the Principle of Segregation: The Use of Testcrosses 35

### DIHYBRID CROSSES AND THE MENDELIAN PRINCIPLE OF INDEPENDENT ASSORTMENT 37

The Principle of Independent Assortment 37

Branch Diagram of Dihybrid Crosses 39

Trihybrid Crosses 39

### THE "REDISCOVERY" OF MENDEL'S PRINCIPLES 40

### STATISTICAL ANALYSIS OF GENETIC DATA: THE CHI-SQUARE TEST 40

### MENDELIAN GENETICS IN HUMANS 43

Pedigree Analysis 43

Examples of Human Genetic Traits 44

## 3

## CHROMOSOMAL BASIS OF INHERITANCE, SEX LINKAGE, AND SEX DETERMINATION 53

### CHROMOSOME THEORY OF INHERITANCE 54

Sex Chromosomes 54

Sex Linkage 56

Nondisjunction of X Chromosomes 58

### SEX DETERMINATION 60

Genotypic Sex Determination Systems 60

Environmental Sex Determination Systems 66

### ANALYSIS OF SEX-LINKED TRAITS IN HUMANS 66

X-Linked Recessive Inheritance 66

X-Linked Dominant Inheritance 68

Y-Linked Inheritance 69

## 4

## EXTENSIONS OF MENDELIAN GENETIC ANALYSIS 75

### MULTIPLE ALLELES 76

ABO Blood Groups 77

*Drosophila* Eye Color 78

### MODIFICATIONS OF DOMINANCE RELATIONSHIPS 79

Incomplete Dominance 79

Codominance 79

Molecular Explanations of Incomplete Dominance and Codominance 79

**GENE INTERACTIONS AND MODIFIED MENDELIAN RATIOS 81**

Gene Interactions That Produce New Phenotypes 81

Epistasis 83

**ESSENTIAL GENES AND LETHAL ALLELES 86****THE ENVIRONMENT AND GENE EXPRESSION 88**

Penetrance and Expressivity 88

Effects of the Environment 89

Nature Versus Nurture 91

---

**5****GENETIC MAPPING IN EUKARYOTES 98****DISCOVERY OF GENETIC LINKAGE 100**Morgan's Linkage Experiments with *Drosophila* 100**CONSTRUCTING GENETIC MAPS 102**

Detecting Linkage Through Testcrosses 102

Gene Mapping Using Two-Point Testcrosses 104

Generating a Genetic Map 105

Double Crossovers 106

Three-Point Cross 108

Mapping Chromosomes Using Three-Point Testcrosses 109

**MAPPING THE HUMAN GENOME 113**

Constructing Genetic Linkage Maps 114

Constructing Physical Maps 114

Integrating Genetic Linkage Maps and Physical Maps 116

**TETRAD ANALYSIS IN CERTAIN HAPLOID EUKARYOTES 116**

Using Tetrad Analysis to Map Two Linked Genes 118

---

**6****GENETIC ANALYSIS IN BACTERIA AND BACTERIOPHAGES 127****GENETIC ANALYSIS OF BACTERIA 129****GENETIC MAPPING IN BACTERIA BY CONJUGATION 130**Discovery of Conjugation in *E. coli* 130The Sex Factor *F* 131High-Frequency Recombination Strains of *E. coli* 132*F'* Factors 132

Using Conjugation to Map Bacterial Genes 134

Circularity of the *E. coli* Map 136**GENETIC MAPPING IN BACTERIA BY TRANSFORMATION 137****GENETIC MAPPING IN BACTERIA BY TRANSDUCTION 138**

Bacteriophages: An Introduction 138

Transduction Mapping of Bacterial Chromosomes 140

**MAPPING GENES OF BACTERIOPHAGES 143****FINE-STRUCTURE ANALYSIS OF A BACTERIOPHAGE GENE 145**Recombination Analysis of *rII* Mutants 145Defining Genes by Complementation (*Cis-Trans*) Tests 148

---

**7****CHROMOSOMAL MUTATIONS 154****TYPES OF CHROMOSOMAL MUTATIONS 155****VARIATIONS IN CHROMOSOME STRUCTURE 156**

Deletion 156

Duplication 157

Inversion 159

Translocation 161

Fragile Sites and Fragile X Syndrome 164

**VARIATIONS IN CHROMOSOME NUMBER 165**

Changes in One or a Few Chromosomes 166

Changes in Complete Sets of Chromosomes 170

---

**8****GENE CONTROL OF PROTEINS 179****GENE CONTROL OF ENZYME STRUCTURE 180**

Garrod's Hypothesis of Inborn Errors of Metabolism 180

The One Gene-One Enzyme Hypothesis 180

**GENETICALLY BASED ENZYME DEFICIENCIES IN HUMANS 184**

Phenylketonuria 184

Albinism 186

Lesch-Nyhan Syndrome 186

Tay-Sachs Disease 187

#### GENE CONTROL OF PROTEIN STRUCTURE 187

Sickle-Cell Anemia 187

Other Hemoglobin Mutants 189

Biochemical Genetics of the Human ABO Blood Groups 189

Cystic Fibrosis 190

#### GENETIC COUNSELING 191

Carrier Detection 192

Fetal Analysis 192

## 9

### DNA: THE GENETIC MATERIAL 200

#### THE GENETIC MATERIAL 201

Griffith's Transformation Experiment 202

The Nature of the Transforming Principle 203

The Hershey and Chase Bacteriophage Experiments 204

#### THE CHEMICAL COMPOSITION OF DNA AND RNA 204

The DNA Double Helix 208

Different DNA Structures 211

## 10

### DNA: ORGANIZATION IN CHROMOSOMES 216

#### CHROMOSOMES OF BACTERIA, ARCHAEA, AND VIRUSES 217

Chromosomes of Bacteria and Archaea 217

Viral Chromosomes 218

#### EUKARYOTIC CHROMOSOMES 220

The Karyotype 221

The Molecular Structure of the Eukaryotic Chromosome 222

Centromeres and Telomeres 227

#### UNIQUE-SEQUENCE AND REPETITIVE-SEQUENCE DNA IN EUKARYOTIC CHROMOSOMES 227

Unique-Sequence DNA 228

Repetitive-Sequence DNA 228

## 11

### DNA REPLICATION 233

#### SEMICONSERVATIVE DNA REPLICATION 234

The Meselson-Stahl Experiment 235

Semiconservative DNA Replication in Eukaryotes 237

#### ENZYMES INVOLVED IN DNA SYNTHESIS 238

DNA Polymerase I 238

Roles of DNA Polymerases 239

#### MOLECULAR MODEL OF DNA REPLICATION 241

Initiation of Replication 241

Semidiscontinuous DNA Replication 242

#### DNA REPLICATION IN EUKARYOTES 244

DNA Replication and the Cell Cycle 244

Eukaryotic Replication Enzymes 246

Replicons 246

Origins of Replication 247

Replicating the Ends of Chromosomes 248

Assembly of New DNA into Nucleosomes 250

#### DNA RECOMBINATION 250

## 12

### GENE EXPRESSION: TRANSCRIPTION 256

#### GENE EXPRESSION: AN OVERVIEW 258

#### THE TRANSCRIPTION PROCESS 258

RNA Synthesis 258

Initiation of Transcription at Promoters 260

Elongation and Termination of an RNA Chain 262

#### TRANSCRIPTION IN EUKARYOTES 262

Eukaryotic RNA Polymerases 262

Transcription of Protein-Coding Genes by RNA Polymerase II 262

Eukaryotic mRNAs 264

Transcription of Other Genes 268

## 13

### GENE EXPRESSION: TRANSLATION 279

#### PROTEINS 280

Chemical Structure of Proteins	280
Molecular Structure of Proteins	281
<b>THE NATURE OF THE GENETIC CODE</b>	<b>281</b>
Deciphering the Genetic Code	283
Characteristics of the Genetic Code	284
<b>TRANSLATION: THE PROCESS OF PROTEIN SYNTHESIS</b>	<b>286</b>
Charging tRNA	286
Initiation of Translation	287
Elongation of the Polypeptide Chain	288
Termination of Translation	290
<b>PROTEIN SORTING IN THE CELL</b>	<b>292</b>

## 14

### CLONING AND MANIPULATION OF DNA 297

<b>DNA CLONING</b>	<b>299</b>
Restriction Enzymes	299
Cloning Vectors and the Cloning of DNA	301
<b>RECOMBINANT DNA LIBRARIES</b>	<b>305</b>
Genomic Libraries	305
Chromosome Libraries	306
cDNA Libraries	306
<b>FINDING A SPECIFIC CLONE IN A LIBRARY</b>	<b>307</b>
Screening a cDNA Library	307
Screening a Genomic Library	308
Identifying Genes in Libraries by Complementation of Mutations	309
<b>ANALYSIS OF GENES AND GENE TRANSCRIPTS</b>	<b>311</b>
Restriction Enzyme Analysis of Cloned DNA Sequences	311
Restriction Enzyme Analysis of Genes in the Genome	313
Analysis of Gene Transcripts	314
DNA Sequencing	315
<b>POLYMERASE CHAIN REACTION (PCR)</b>	<b>318</b>
<b>APPLICATIONS OF RECOMBINANT DNA AND PCR TECHNIQUES</b>	<b>320</b>
Analysis of Biological Processes	320
Diagnosis of Human Genetic Diseases by DNA Analysis	320
Isolation of Human Genes	321
The Human Genome Project	324
DNA Typing	325

Gene Therapy	327
Commercial Products	328
Genetic Engineering of Plants	328
<b>ETHICS AND GENETICS</b>	<b>329</b>

## 15

### REGULATION OF GENE EXPRESSION IN BACTERIA AND BACTERIOPHAGES 334

<b>THE <i>lac</i> OPERON OF <i>E. COLI</i></b>	<b>335</b>
Lactose as a Carbon Source for <i>E. coli</i>	336
Experimental Evidence for the Regulation of the <i>lac</i> Genes	336
Jacob and Monod's Operon Model for the Regulation of the <i>lac</i> Genes	339
Positive Control of the <i>lac</i> Operon	343
<b>THE <i>trp</i> OPERON OF <i>E. COLI</i></b>	<b>344</b>
Gene Organization of the Tryptophan Biosynthesis Genes	344
Regulation of the <i>trp</i> Operon	345
<b>REGULATION OF GENE EXPRESSION IN PHAGE LAMBDA</b>	<b>349</b>
Early Transcription Events	349
The Lysogenic Pathway	349
The Lytic Pathway	350

## 16

### EUKARYOTIC GENE REGULATION 357

<b>LEVELS OF CONTROL OF GENE EXPRESSION IN EUKARYOTES</b>	<b>359</b>
Transcriptional Control	359
RNA Processing Control	364
mRNA Translation Control	366
mRNA Degradation Control	366
Protein Degradation Control	367
<b>GENE REGULATION IN DEVELOPMENT AND DIFFERENTIATION</b>	<b>367</b>
Constancy of DNA in the Genome During Development	368
Differential Gene Activity Among Tissues and During Development	369

Immunogenetics and Chromosome  
Rearrangements During Development 370

## GENETIC REGULATION OF DEVELOPMENT IN *DROSOPHILA* 374

*Drosophila* Developmental Stages 374

Embryonic Development 374

Imaginal Discs 377

Homeotic Genes 377

## 17

## GENETICS OF CANCER 385

RELATIONSHIP OF THE CELL CYCLE TO CANCER 387

THE TWO-HIT MUTATION MODEL FOR CANCER 388

GENES AND CANCER 390

Oncogenes 390

Tumor Suppressor Genes 397

Mutator Genes 401

THE MULTISTEP NATURE OF CANCER 401

CHEMICALS AND RADIATION AS CARCINOGENS 402

Chemical Carcinogens 403

Radiation 403

## 18

## DNA MUTATION AND REPAIR 407

ADAPTATION VERSUS MUTATION 408

MUTATIONS DEFINED 409

Types of Point Mutations 410

Reverse Mutations and Suppressor Mutations 412

SPONTANEOUS AND INDUCED MUTATIONS 412

Spontaneous Mutations 412

Induced Mutations 414

THE AMES TEST: A SCREEN FOR POTENTIAL  
MUTAGENS 419

DNA REPAIR MECHANISMS 420

Direct Correction of Mutational Lesions 420

Repair Involving Excision of Base Pairs 420

Human Genetic Diseases Resulting from DNA  
Replication and Repair Errors 423

SCREENING PROCEDURES FOR THE ISOLATION OF  
MUTANTS 425

Visible Mutations 425

Nutritional Mutations 425

Conditional Mutations 425

Modern Molecular Screens 426

## 19

## TRANSPOSABLE ELEMENTS 433

TRANSPOSABLE ELEMENTS IN PROKARYOTES 434

Insertion Sequences 434

Transposons 436

TRANSPOSABLE ELEMENTS IN EUKARYOTES 437

The *Ac-Ds* System in Corn 437

*Ty* Elements in Yeast 441

*P* Elements in *Drosophila* 442

Human Retrotransposons 443

## 20

## EXTRANUCLEAR GENETICS 446

ORGANIZATION OF EXTRANUCLEAR GENOMES 448

Mitochondrial Genome 448

Chloroplast Genome 451

RNA Editing 452

Origin of Mitochondria and Chloroplasts 453

RULES OF EXTRANUCLEAR INHERITANCE 453

EXAMPLES OF EXTRANUCLEAR INHERITANCE 454

Shoot Variegation in the Four O'Clock 454

The [*poky*] Mutant of *Neurospora* 455

Yeast *petite* Mutants 456

Extranuclear Genetics of *Chlamydomonas* 459

Human Genetic Diseases and Mitochondrial  
DNA Defects 459

Infectious Heredity—Killer Yeast 460

CONTRASTS TO EXTRANUCLEAR INHERITANCE 461

Maternal Effect 461

Genomic Imprinting 463

## 21

## POPULATION GENETICS 468

GENETIC STRUCTURE OF POPULATIONS 470

Genotypic Frequencies 470

Allelic Frequencies 471

<b>THE HARDY-WEINBERG LAW 473</b>
Assumptions of the Hardy-Weinberg Law 473
Predictions of the Hardy-Weinberg Law 474
Derivation of the Hardy-Weinberg Law 474
Extensions of the Hardy-Weinberg Law to Loci with More than Two Alleles 476
Extensions of the Hardy-Weinberg Law to Sex-Linked Alleles 476
Testing for Hardy-Weinberg Proportions 477
Using the Hardy-Weinberg Law to Estimate Allelic Frequencies 477
<b>GENETIC VARIATION IN NATURAL POPULATIONS 477</b>
Models of Genetic Variation 478
Measuring Genetic Variation with Protein Electrophoresis 478
Measuring Genetic Variation with RFLPs and DNA Sequencing 480
<b>CHANGES IN GENETIC STRUCTURE OF POPULATIONS 482</b>
Mutation 482
Genetic Drift 484
Migration 486
Natural Selection 487
Simultaneous Effects of Mutation and Selection 494
Nonrandom Mating 494
<b>SUMMARY OF THE EFFECTS OF EVOLUTIONARY PROCESSES ON THE GENETIC STRUCTURE OF A POPULATION 495</b>
Changes in Allelic Frequency Within a Population 495
Genetic Divergence Among Populations 496
Increases and Decreases in Genetic Variation Within Populations 496
<b>SUMMARY OF THE EFFECTS OF EVOLUTIONARY PROCESSES ON THE CONSERVATION OF GENETIC RESOURCES 496</b>
<b>MOLECULAR GENETIC TECHNIQUES AND EVOLUTION 496</b>
DNA Sequence Variation 497
DNA Length Polymorphisms 498
Evolution of Multigene Families Through Gene Duplication 498

Evolution in Mitochondrial DNA Sequences 499
Concerted Evolution 500
Evolutionary Relationships Revealed by RNA and Nuclear DNA Sequences 500

## 22

## QUANTITATIVE GENETICS 507

<b>THE NATURE OF CONTINUOUS TRAITS 509</b>
Why Some Traits Have Continuous Phenotypes 509
Questions Studied in Quantitative Genetics 509
<b>STATISTICAL TOOLS 510</b>
Samples and Populations 510
Distributions 510
The Mean 512
The Variance and the Standard Deviation 512
<b>POLYGENIC INHERITANCE 514</b>
Inheritance of Ear Length in Corn 514
Polygene Hypothesis for Quantitative Inheritance 515
Determining the Number and Location of Polygenes for a Quantitative Trait 516
<b>HERITABILITY 517</b>
Components of the Phenotypic Variance 518
Broad-Sense and Narrow-Sense Heritability 519
Understanding Heritability 519
<b>RESPONSE TO SELECTION 520</b>

## GLOSSARY G-1

## SUGGESTED READING R-1

## SOLUTIONS TO SELECTED QUESTIONS AND PROBLEMS S-1

## CREDITS C-1
