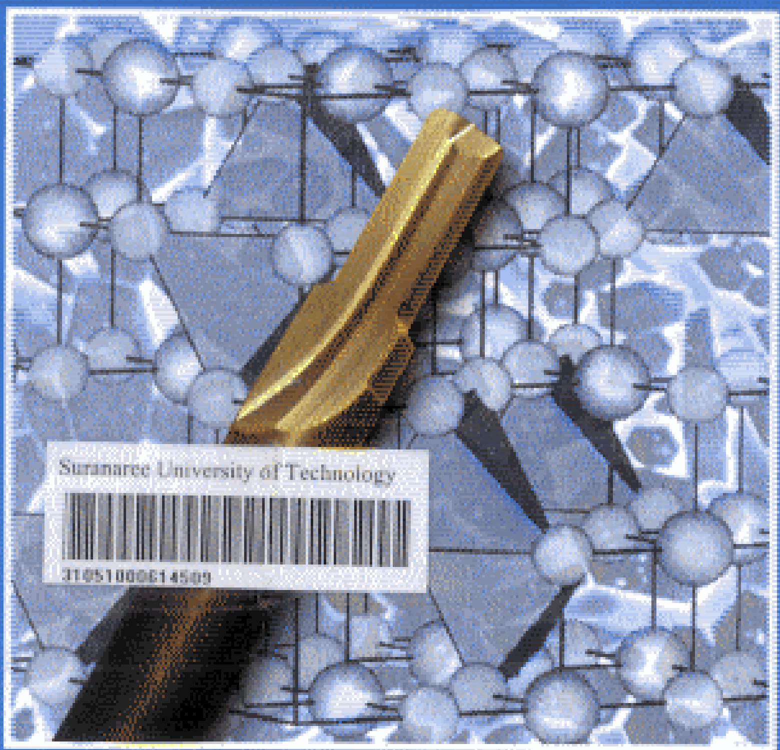
WILEY-VCH

Handbook of Ceramic Hard Materials

Edited by Ralf Riedel

Volume 2



Contents

List of Contributors XXVII
List of Symbols XXXIII
List of Abbreviations XXXIX

Introduction: Novel Ultrahard Materials
A. Zerr and R. Riedel

Introduction XLV
Hard Materials XLVI
Hardness XLVII
Carbon-based Hard Materials L
Diamond LII
Diamond-like and Amorphous Carbon LV
Novel Hypothetical Three-dimensional Carbon Phases LVI
Fullerenes LIX
Carbon Nitride (C_3N_4) LIX
Boron-based Hard Materials LXIV
Boron Nitrides LXIV
Boron-rich Boron Nitrides LXVII
Nitrogen-rich Boron Nitride LXVIII
Boron Carbonitrides ($B_xC_yN_z$) LXVIII
Boron Suboxides LXXI
Silicon-based Materials LXXI
Concluding Remarks LXXII
Acknowledgement LXXIII
References LXXIII

Part I Structures and Properties

1 **Structural Chemistry of Hard Materials**
W. Jeitschko, R. Pöttgen, and R.-D. Hoffmann

1.1 Introduction 3
1.2 Diamond and Diamond-Related Structures 5
1.2.1 The Crystal Structure of Diamond 5
1.2.2 The Isoelectronic Compounds c-BN and SiC 6
1.3 Crystal Chemistry of Borides and Boron Carbides 8
1.4 The Structures of Transition Metal Carbides 12
1.5 Silicides and Silicide Carbides of Transition Metals 20

1.6 Nitrides 23
1.6.1 Nitrides of Main Group Elements 24
1.6.2 Transition Metal Nitrides 25
1.6.3 Perspectives: Nitridosilicates 29
1.7 Oxide Ceramics 30
1.7.1 Hard Ceramics of Main Group Elements 30
1.7.2 Transition Metal Oxides 32
1.8 Amorphous Hard Materials 36
References 37

2 Phase Transitions and Material Synthesis using the CO_2-Laser Heating Technique in a Diamond Cell
A. Zerr, G. Serghiou, and R. Boehler.

2.1 Introduction 41
2.2 Technique of CO_2-Laser Heating in a Diamond Anvil Cell 42
2.2.1 Sample Assemblage in a Diamond Anvil Cell 42
2.2.2 Pressure Conditions in the Sample Volume 43
2.2.3 Experimental Set-up for CO_2-Laser Heating in a Diamond Anvil Cell 44
2.2.4 Temperature Determination 45
2.2.5 Temperature Stabilization 45
2.2.6 Radial Temperature Gradients 48
2.2.7 Raman and Fluorescence Spectroscopic Analysis of Samples in a Diamond Anvil Cell 48
2.3 Determination of Melting Temperatures at High Pressures 49
2.3.1 Melting of Cubic BN at 10 GPa 49
2.3.2 Melting Temperatures of Materials Relevant to the Earth's Lower Mantle 51
2.4 Phase Diagrams, Decomposition Reactions, and Stability of Solids at High Pressures and Temperatures 54
2.4.1 Coesite–Stishovite Phase Boundary 55
2.4.2 High Pressure and Temperature Phase Diagram and Decomposition Reactions in a Ternary System 56
2.4.3 Stability of a Perovskite Oxide with Respect to its Component Oxides 59
2.5 CO_2-laser Heating Experiments on Organic Compounds 60
2.6 Conclusion 62
Acknowledgments 62
References 62

3 Mechanical Properties and their Relation to Microstructure
D. Sherman and D. Brandon

3.1 Introduction 66
3.1.1 Applications and Engineering Requirements 66

3.1.2 Bulk Components 68
3.1.3 Coatings 70
3.1.4 Engineering Requirements 70
3.2 Principal Mechanical Properties 71
3.2.1 Elastic Modulus 71
3.2.2 Strength 72
3.2.3 Fracture Toughness 74
3.2.4 Hardness 79
3.3 Mechanical Testing of Hard Materials 81
3.3.1 Elastic Modulus 81
3.3.2 Fracture Strength 81
3.3.3 Fracture Toughness 83
3.3.4 Hardness 84
3.3.5 Indentation Toughness 86
3.3.6 Erosion, Wear and Scratch Tests 89
3.4 Microstructural Parameters and Mechanical Properties 91
3.5 Failure Mechanisms 94
3.5.1 Creep Behavior 94
3.5.2 Mechanical Fatigue 95
3.5.3 Ballistic Properties 97
3.6 Conclusions 98
References 99

4 Nanostructured Superhard Materials
S. Veprek

4.1 Introduction 104
4.2 Concept for the Design of Superhard Materials 109
4.2.1 Nanocrystalline Materials 110
4.2.2 Heterostructures 114
4.3 Preparation and Properties of Superhard Nanocrystalline Composites 116
4.3.1 Preparation 116
4.3.2 Properties of the ncM_nN/aSi_3N_4 Composites 119
4.3.3 Other Superhard Nanocomposites and the General Validity of the Design Principle 124
4.4 Discussion of the Possible Origin of the Hardness and Stability of the Nanostructure 128
4.4 Conclusions 133
Acknowledgments 134
References 134

5 Corrosion of Hard Materials
K. G. Nickel and Y. G. Gogotsi

5.1 Introduction 140

5.2 Corrosive Media 140
5.3 Corrosion Modes 141
5.3.1 Active and Passive Corrosion 141
5.3.2 Homogeneity and Location of Attack: Internal, External and Localized Corrosion 141
5.4 Corrosion Kinetics 142
5.4.1 Physical Boundary Conditions 142
5.4.2 Active Corrosion Kinetics 143
5.4.3 Basic Passive Corrosion Kinetics 145
5.4.4 Kinetic Breaks 147
5.4.5 Complex Kinetics 148
5.5 Corrosion Measurement 150
5.5.1 Experimental Methods 150
5.5.2 Corrosion Data 151
5.6 Materials 154
5.6.1 Diamond and Diamond-like Carbons 154
5.6.2 Carbides 155
5.6.3 Nitrides 166
5.6.4 Carbonitrides 173
5.6.5 Titanium Diboride 176
References 177

6 Interrelations Between the Influences of Indentation Size, Surface State, Grain Size, Grain-Boundary Deformation, and Temperature on the Hardness of Ceramics
A. Krell

6.1 Introduction 183
6.2 The Assessment of Residual Porosity and Flaw Populations: A Prerequisite for any Hardness Investigation 184
6.3 Theoretical Considerations 185
6.3.1 The Role of the Lattice and of Grain Boundaries in the Inelastic Deformation at an Indentation Site in Sintered Hard Materials 185
6.3.2 Quantitative Understanding the Load Effect on the Hardness: Theoretical Considerations Compared with Single Crystal Data 188
6.4 Influences of the Grain Size and the State of the Surface 191
6.4.1 The Grain Size Influence on the Load Effect of the Hardness: Modeling Experimental Results 191
6.4.2 The Effect of the Grain Size and the Surface State in Ceramics when Recorded by Different Measuring Approaches 193
6.5 Comparing the Grain Size Effect and the Indentation Size Effect: The Role of Grain Boundaries at Room Temperature 195
6.6 The Effects of Temperature on the Hardness of Ceramics 198
6.7 Summary 199
References 201

7 **Transition Metal Carbides, Nitrides, and Carbonitrides**
W. Lengauer

7.1 Introduction 202
7.2 General Features of Structure and Bonding 205
7.2.1 General Structural Features 205
7.2.2 General Features of Bonding 206
7.3 Preparation 207
7.4 Characterization 210
7.4.1 Chemical Analysis 210
7.4.2 Physical Microanalysis 211
7.5 Thermodynamics 212
7.5.1 Stability of Carbides 212
7.5.2 Nitrogen Partial Pressure of Nitrides 212
7.5.3 Phase Equilibria of Important Carbide Systems 213
7.5.4 Transition Metal–Nitrogen Systems and Structure of Phases 216
7.5.5 Carbonitride Systems 221
7.6 Properties of Important Transition Metal Carbides, Nitrides, and Carbonitrides 224
7.6.1 Melting Points 224
7.6.2 Color 224
7.6.3 Thermal and Electrical Conductivities 225
7.6.4 Thermal Expansion 228
7.6.5 Diffusivities 229
7.6.6 Elastic Properties 231
7.6.7 Microhardness 234
7.7 Industrial Applications 238
7.7.1 Cemented Carbides and Carbonitrides 238
7.7.2 Deposited Layers 241
7.7.3 Diffusion Layers 246
Acknowledgments 248
References 248

8 **New Superhard Materials: Carbon and Silicon Nitrides**
J. E. Lowther

8.1 Introduction 253
8.2 Modeling Procedures 254
8.2.1 Semi-empirical Approaches 254
8.2.2 Tight-binding Schemes 255
8.2.3 *Ab initio* Pseudopotential Approach 256
8.2.4 Transition Pressures and Relative Stability 256
8.3 Carbon Nitride 257
8.3.1 Crystalline Structures 258
8.3.2 Graphitic Structures 259
8.3.3 Amorphous Structures 261

8.3.4 Relative Stability 263
8.4 Silicon Carbon Nitride 264
8.4.1 βSiC_2N_4 265
8.4.2 Near-cubic Forms of SiC_2N_4 266
8.4.3 Relative Stability 268
8.5 Conclusions 268
Acknowledgements 269
References 269

9 Effective Doping in Novel sp^2 Bonded Carbon Allotropes
G. Jungnickel, P. K. Sitch, T. Frauenheim, C. R. Cousins, C. D. Latham, B. R. Eggen, and M. I. Heggie

9.1 Introduction 271
9.2 Lattice Description 274
9.3 Computational Methods 276
9.4 Static Properties 278
9.5 Electronic Properties 279
9.6 Conclusions 282
Acknowledgments 283
References 283

Part II Synthesis and Processing

1 Directed Metal Oxidation
V. Jayaram and D. Brandon

1.1 Historical Background 289
1.2 Oxidation and Oxide Formation 290
1.2.1 Initial Oxidation 291
1.3 Related Ceramic Processing Routes 293
1.4 Directed Metal Oxidation Incubation 295
1.5 Directed Metal Oxidation Growth 300
1.5.1 Introduction 300
1.5.2 Directed Metal Oxidation Composites from Al–Mg Alloys 300
1.5.3 Directed Metal Oxidation Growth from other Aluminum Alloys 304
1.5.4 Microstructural Scale 305
1.5.5 Growth into Particulate Preforms 307
1.5.6 Growth into Fibrous Preforms 309
1.6 Mechanical Properties 310
1.6.1 Elastic Modulus 310
1.6.2 Strength and Toughness 311
1.6.3 Thermal Shock 313
1.6.4 High Temperature Strength 313
1.6.5 Wear Properties 314
1.6.6 Mechanical Properties of Fiber-reinforced DMO Composites 314

1.7 Corrosion of Directed Metal Oxidation Composites 316
1.8 Other Properties 316
1.9 Applications 316
1.9.1 Wear Resistant Components 317
1.9.2 Ceramic Composite Armor 317
1.9.3 Thermal Barriers and Heat Sinks 318
References 318

2 **Self-Propagating High-Temperature Synthesis of Hard Materials**
Z. A. Munir and U. Anselmi-Tamburini

2.1 Introduction 322
2.2 Mechanistic Characterization of the Process 327
2.3 Effect of Experimental Parameters 331
2.3 Synthesis of Dense Materials 342
2.4 Synthesis by Field-Activated Self-propagating High-temperature Synthesis 348
2.6 Selected Recent Examples of Synthesis of Hard Materials 356
Acknowledgment 368
References 368

3 **Hydrothermal Synthesis of Diamond**
K. G. Nickel, T. Kraft, and Y. G. Gogotsi

3.1 Introduction 374
3.2 Evidence from Nature 376
3.3 Hydrothermal Synthesis 377
3.3.1 C–H–O System 377
3.3.2 Hydrothermal Treatment of SiC 382
3.4 Outlook 387
Acknowledgments 387
References, 387

4 **Chemical Vapor Deposition of Diamond Films**
C.-P. Klages

4.1 Introduction 390
4.2 Preparation Methods for Diamond Films 391
4.2.1 Hot-filament Chemical Vapor Deposition 392
4.2.2 Microwave-plasma-based Methods 397
4.2.3 Preparation of Special Forms: Textured and Heteroepitaxial Films 400
4.3 Thermochemistry and Mechanism of Chemical Vapor Deposition Diamond Growth 407
4.3.1 Transformation of Graphite to Diamond at Low Pressures 407

4.3.2 Reactive Species in Diamond Chemical Vapor Deposition, the Role of CH_3 408
4.4 Properties and Applications of Chemical Vapor Deposited Diamond 410
4.4.1 Diamond Coated Cutting Tools 411
4.4.2 Thermal Conductivity of Chemical Vapor Deposited Diamond: Thermal Management Applications 412
4.4.3 Electrical Properties and Electronic Applications 413
4.4.4 Electrochemical Use of Chemical Vapor Deposited Diamond 415
4.5 Summary 417
References 417

5 Vapor Phase Deposition of Cubic Boron Nitride Films
K. Bewilogua and F. Richter

5.1 Introduction 420
5.2 Empirical Results 421
5.2.1 Deposition Methods 421
5.2.2 Morphology and Structure of cBN Films 423
5.2.3 Film Adhesion 427
5.3 Models of cBN Formation 427
5.4 Sputter Deposition of cBN Films 429
5.4.1 Sputter Deposition with Conducting Targets 430
5.4.2 Deposition by d.c. Magnetron Sputter with a Hot Boron Target 431
5.5 Discrimination between Nucleation and Growth Phase 433
5.5.1 Detection of hBN–cBN Transition 433
5.5.2 RF Magnetron Sputtering 435
5.6 Properties of cBN Films 440
5.6.1 Mechanical and Tribological Properties 440
5.6.2 Optical Properties 440
5.6.3 Electrical Properties 441
5.6.4 Other Properties 441
5.7 Summary and Outlook 442
References 442

6 Polymer to Ceramic Transformation: Processing of Ceramic Bodies and Thin Films
G. D. Soraru and P. Colombo

6.1 Introduction 446
6.2 Processing of Monolithic Components 450
6.3 Preparation and Characterization of SiAlOC Ceramic Bodies by Pyrolysis in Inert Atmosphere 452
6.3.1 Experimental Procedure 452

6.4 Results 453
6.4.1 Characterization of the Pre-ceramic Precursors 453
6.4.2 Characterization of the Pre-ceramic Components 454
6.4.3 Characterization of the Ceramic Components 455
6.4.4 Mechanical Characterization at High Temperature 457
6.5 Discussion 458
6.6 Preparation and Characterization of SiAlON Ceramics by Pyrolysis in Reactive Atmosphere 460
6.6.1 Experimental 460
6.7 Results and Discussion 460
6.8 Processing of Thin Ceramic Films 463
6.9 Experimental 463
6.10 Results and Discussion 464
6.10.1 Conventional Conversion Process: Annealing in Controlled Atmosphere 464
6.10.2 Nonconventional Conversion Process: Ion Irradiation 467
6.11 Conclusions 472
Acknowledgments 473
References 473

Part III Materials and Applications

1 Diamond Materials and their Applications
Edited by R. J. Caveney

1.1 Superabrasive tools: A Brief Introduction 479
1.1.1 Introduction 479
1.1.2 Early History 479
1.1.3 Synthetic Diamond 481
1.1.4 Cubic Boron Nitride 482
1.1.5 Polycrystalline Diamond and Cubic Boron Nitride 482
1.1.6 Chemical Vapor Deposited Diamond 484
1.1.7 Outline of Chapter 485
1.2 The Crystallization of Diamond 485
1.2.1 The Carbon Phase Diagram 485
1.2.2 Diamond Crystallization at High Pressure 487
1.2.3 High Pressure Apparatus 490
1.2.4 The Synthesis of Particulate Diamond Abrasives 491
1.2.5 Growth of Large Synthetic Diamonds 496
1.2.6 Novel Diamond Synthesis Routes 504
1.2.7 Cubic Boron Nitride Crystallization 510
1.3 Polycrystalline Diamond and Cubic Boron Nitride 512
1.3.1 Natural Polycrystalline Diamond 512
1.3.2 Synthetic Polycrystalline Diamond 512
1.3.3 Mechanisms involved in Polycrystalline Diamond Manufacturing Process 513

1.3.4 Polycrystalline Cubic Boron Nitride 518
1.4 New Ultrahard Materials 521
1.4.1 Introduction 521
1.4.2 Hardness 521
1.4.3 C_3N_4 523
1.4.4 Boron Rich Nitride 526
1.4.5 Boron Carbonitrides 526
1.4.6 Boron Suboxides 526
1.4.7 Stishovite 526
1.5 Industrial Applications of Diamond and cBN 527
1.5.1 Introduction 527
1.5.2 Abrasive Application 528
1.5.3 Machining of Stone and Concrete 540
1.5.4 Applications of Polycrystalline Ultra-hard Materials 548
1.5.5 Applications of Single Crystal Diamond 559
Acknowledgments 566
References 566

2 Applications of Diamond Synthesized by Chemical Vapor Deposition
R. S. Sussmann

2.1 Introduction 573
2.2 Properties of Chemical Vapor Deposited Diamond 574
2.2.1 Material Grades 574
2.2.2 Optical Properties 576
2.2.3 Strength of Chemical Vapor Deposited Diamond 580
2.2.4 The Young Modulus 581
2.2.5 Thermal Conductivity 582
2.2.6 Dielectric Properties 583
2.3 Optical Applications 583
2.3.1 Chemical Vapor Deposited Diamond for Passive Infrared Windows in Aggressive Environments 584
2.3.2 Windows for High-power Infrared Lasers 589
2.4 Windows for High Power Gyrotron Tubes 597
2.4.1 Window Requirements 598
2.4.2 The Development of Chemical Vapor Deposited Diamond Gyrotron Windows 599
2.5 Thermal Management of Laser Diode Arrays 606
2.5.1 Laser Diode Arrays: General Issues 607
2.5.2 Modelling of Submount Heat Resistance 607
2.5.3 Flatness of Submount 610
2.5.4 Thermal Stress 610
2.6 Cutting Tools, Dressers and Wear Parts 611
2.6.1 Cutting Tools Trends 611
2.6.2 Cutting Tool Application of Chemical Vapor Deposited Diamond 612

2.6.3 Chemical Vapor Deposited Diamond Dressers 616
2.6.4 Chemical Vapor Deposited Diamond Wear Parts 617
References 619

3 **Diamond-like Carbon Films**
C.-P. Klages and K. Bewilogua

3.1 Introduction 623
3.2 Preparation Methods for Diamond-like Carbon Films 623
3.2.1 Hydrogenated Amorphous Carbon (a-C:H) 623
3.2.2. Hydrogen Free Amorphous Carbon (ta-C) 627
3.2.3 Metal-containing Amorphous Hydrocarbon 629
3.3 Microstructure and Bonding of Diamond-like Carbon 630
3.3.1 Amorphous Carbon and Hydrogenated Amorphous Carbon 630
3.3.2 Metal-containing Amorphous Carbon Films 634
3.4. Physical Properties of DLC Films 637
3.4.1 Electrical and Optical Properties 637
3.4.2 Mechanical Properties 639
3.5. Applications of DLC Films 640
3.5.1 Adhesion of DLC Films 640
3.5.2 Tribology of DLC Coatings 642
3.5.3 Tribological Applications 644
3.5.4 Other Applications 644
References 645

4 **Ceramics Based on Alumina: Increasing the Hardness for Tool Applications**
A. Krell

4.1 Recent Trends in the Application of Ceramic Tool Materials 648
4.2 Technological Essentials for Producing Hard and Strong Tool Ceramics 650
4.2.1 Typical Defects in Ceramics Tool Materials: The State of The Art 651
4.2.2 Recent Trends in Ceramic Technologies Related to Tool Ceramics 653
4.3 Tool Materials with Undefined Cutting Edge: Sintered Grinding Materials 658
4.3.1 Technical Demands for Grinding Materials 660
4.3.2 Advanced Commercial Products: Sol/gel-derived Corundum 661
4.3.3 Sintered Alumina Grits Produced by Powder Processing Approaches 665
4.4 New Trend for Cutting Hard Workpieces: Submicrometer Cutting Ceramics for Tools with Defined Cutting Edge 666
4.4.1 Demands for Cutting Materials Used for Turning Hard Workpieces 667

4.4.2 Carbide Reinforced Composite Ceramics Based on Al_2O_3 669
4.4.3 Single Phase Sintered Corundum 670
4.4.4 Comparative Cutting Studies with Submicrometer Ceramics: Al_2O_3 and Composites Reinforced with Ti(C,N) and Ti(C,O) 670
4.5 Summary 680
References 681

5 Silicon Carbide Based Hard Materials
K. A. Schwetz

5.1 Introduction 683
5.1.1 History 683
5.1.2 Natural Occurrence [7] 684
5.2 Structure and Phase Relations of SiC 685
5.3 Production of SiC 688
5.3.1 The Acheson/ESK Process 688
5.3.2 Other Production Methods 691
5.3.3 Dense SiC Shapes 699
5.4 Properties of Silicon Carbide 719
5.4.1 Physical Properties 719
5.4.2 Chemical Properties 720
5.4.3 Tribological Properties 723
5.5 Quality Control 734
5.6 Toxicology and Occupational Health 736
5.7 Uses of Silicon Carbide 736
Acknowledgments 740
References 740

6 Silicon Nitride Based Hard Materials
M. Herrmann, H. Klemm, Chr. Schubert

6.1 Introduction 749
6.2 Crystal Structure and Properties of the Si_3N_4 Modifications 753
6.3 Densification 755
6.4 Microstructural Development 758
6.4.1 Microstructural development of β-Si_3N_4 materials 758
6.4.2 Microstructural development of α'-SiALON materials 768
6.5 Properties of Si_3N_4 Materials 771
6.5.1 Mechanical properties at room temperatures 771
6.5.2 High-temperature properties of silicon nitride materials 777
6.5.3 Wear resistance of Si_3N_4 materials 782
6.5.4 Corrosion resistance of Si_3N_4 786
6.6 Conclusions/Further potential of silicon nitride materials 792
Acknowledgements 795
References 795

7 Boride-Based Hard Materials
R. Telle, L. S. Sigl, and K. Takagi

7.1 Introduction 802
7.2 Chemical Bonding and Crystal Chemistry of Borides 803
7.2.1 Chemical Bonding of Borides 803
7.2.2 The Crystal Structure of Borides 804
7.3 Phase Systems 812
7.3.1 Binary Phase Diagrams of Technically Important Systems 813
7.3.2 Ternary and Higher Order Systems 818
7.4 Boron Carbide Ceramics 837
7.4.1 Preparation of Boron Carbide 837
7.4.2 Sintering of Boron Carbide 839
7.4.3 Properties of Boron Carbide 851
7.4.4 Chemical Properties and Oxidation of Boron Carbide 855
7.4.5 Boron Carbide–Based Composites 857
7.5 Transition Metal Boride Ceramics 874
7.5.1 *Preparation of Transition Metal Borides 875*
7.5.2 Densification of Transition Metal Borides 876
7.5.3 Properties of Transition Metal Borides Ceramics 878
7.6 Multiphase Hard Materials Based on Carbide–Nitride–Boride–Silicide Composites 888
7.7 Boride–Zirconia Composites 888
7.8 Cemented Borides 895
7.8.1 Boron Carbide-Based Cermets 895
7.8.2 Titanium Diboride-Based Cermets 897
7.8.3 Cemented Ternary Borides 919
7.8.4 Potentials and Applications 927
7.9 Future Prospects and Fields of Application 933
References 936

8 The Hardness of Tungsten Carbide–Cobalt Hardmetal 946
S. Luyckx 946

8.1 Introduction 946
8.2 The Hardness of the Two Component Phases 947
8.2.1 The Hardness of Tungsten Carbide 947
8.2.2 The Hardness of Cobalt 948
8.3 Factors Affecting the Hardness of WC–Co Hardmetal 950
8.3.1 Cobalt Content and Tungsten Carbide Grain Size 950
8.3.2 Grain Size Distribution and Cobalt Mean Free Path 952
8.3.3 Binder Composition and Carbon Content 952
8.3.4 Porosity 953
8.3.5 Effect of Temperature 953
8.4 Relationships between Hardness and Other Hardmetal Properties 960

8.4.1 Relationship between Hardness and Toughness 962
8.4.2 Relationship between Hardness and Abrasive Wear Resistance 962
8.5 Conclusions 963
Acknowledgments 963
References 964

9 Data Collection of Properties of Hard Materials
G. Berg, C. Friedrich, E. Broszeit, and C. Berger

9.1 Introduction 965
9.2 Profile of Properties 965
9.3 Organization and Contents of the Data Collection 966
Acknowledgement 967
References 991

Index 997
