Preface

xi

Part I

Chapter 1	Decision Support and Computational Intelligence	1
1.1	Overview	1
1.2	The Need for Decision Support Agents	1
1.3	Computerized Decision Support Mechanisms	2
1.4	Computational Intelligence for Decision Support	3
1.5	A Remark on Terminology	3
1.6	Data, Information and Knowledge	5
1.7	Issues to be Discussed in this Book	6
	Summary	8
	Self-examination Questions	8
	References	9
Chapter 2	Search and Representation	11
2.1	Overview	11
2.2	Sample Problems and Applications of Computational Intelligence	11
	2.2.1 Some Simple Examples	11
	2.2.2 Applications	14
2.3	Definition of Computational Intelligence	16
	2.3.1 Historical Development of Computational Intelligence	16
	2.3.2 Computational Intelligence as Agent-Based Problem Solving	16
	2.3.3 Measuring the Intelligence: Turing Test	17
2.4	Basic Assumptions of Computational Intelligence	18
	2.4.1 Symbolism	18
	2.4.2 Sequential or Parallel	19
	2.4.3 Logic-based Approach	20
	2.4.4 Human Intelligence as Metaphor	20
	2.4.5 Summary	21
2.5	Basic Storage and Search Structures	21
	2.5.1 Abstract Data Types and Data Structures	21
	2.5.2 Linear Structures: Lists, Stacks, Queues and Priority Queues	22
	2.5.3 Trees	22
	2.5.4 Index Structures for Data Access	23
	2.5.5 Discrimination Trees for Information Retrieval	23
	2.5.6 Graphs	23
	2.5.7 Remarks on Search Operation	24
2.6	Problem Solving Using Search	24
	2.6.1 Meanings of Search	24

2.6.2	State Space Search	25
2.6.3	Remarks on Scaling Up	26
2.7	Representing Knowledge for Search	26
2.7.1	Levels of Abstraction In Computational Intelligence Problem Solving	26
2.7.2	Using Abstract Levels	27
2.7.3	Programming Languages for Computational Intelligence	28
2.8	State Space Search	29
2.8.1	Uninformed Search (Blind Search)	29
2.8.2	Heuristic Search	32
2.9	Remark on Constraint-Based Search	36
2.10	Planning And Machine Learning as Search	37
2.10.1	Planning as Search	37
2.10.2	Symbol-Based Machine Learning as Search	38
	Summary	39
	Self-examination Questions	40
	References	41
Chapter 3	Predicate Logic	43
3.1	Overview	43
3.2	First Order Predicate Logic	43
3.2.1	Basics	43
3.2.2	Propositional Calculus	44
3.2.3	Predicates	45
3.2.4	Quantifiers	47
3.2.5	Knowledge Base	47
3.2.6	Inference Rules	48
3.2.7	Substitution, Unification, Most General Unifier	49
3.2.8	Resolution -- The Basic Idea	49
3.3	Prolog for Computational Intelligence	53
3.3.1	Basics of Prolog	53
3.3.2	Sample Prolog Programs	58
3.3.3	Summary of Important Things About Prolog	62
3.4	Abduction and Induction	63
3.4.1	Other Forms of Reasoning	63
3.4.2	Induction	63
3.4.3	Abduction	64
3.5	Nonmonotonic Reasoning	64
3.5.1	Meaning of Nonmonotonic Reasoning	64
3.5.2	Commonsense Reasoning	65
3.5.3	Circumscription	66
3.5.4	Summary of Nonmonotonic Reasoning	67
	Summary	67
	Self-examination Questions	68
	References	68

Chapter 4	Relations as Predicates	69
4.1	Overview	69
4.2	The Concept of Relation	69
4.3	Overview of Relational Data Model	70
	4.3.1 Schema and Instance	70
	4.3.2 Declarative and Procedural Languages	71
4.4	Relational Algebra	72
	4.4.1 Preview of Relational Algebra	72
	4.4.2 How to form a Relational Algebra Query from a Given English Query	73
	4.4.3 Relational Algebra: Fundamental Operators	74
	4.4.4 Relational Algebra: Additional Operators	74
	4.4.5 Combined Use of Operators	76
	4.4.6 Extended RA Operations	77
4.5	Relational Views and Integrity Constraints	77
	4.5.1 Virtual Views and Materialized Views	77
	4.5.2 Integrity Constraints	78
4.6	Functional Dependencies	79
	4.6.1 Definition of Functional Dependency	80
	4.6.2 Keys and Functional Dependencies	80
	4.6.3 Inference Rules: Armstrong Axioms	81
	4.6.4 Closures and Canonical Cover	81
	4.6.5 Algorithms for Finding Keys from Functional Dependencies	82
	4.6.6 Referential Integrity	83
4.7	Basics of Relational Database Design	83
	4.7.1 What is the Meaning of a Good Design and Why Study It?	83
	4.7.2 Boyce-Codd Normal Form (BCNF) and Third Normal Form (3NF)	85
	4.7.3 Remarks on Normal Forms and Denormalization	86
	4.7.4 Desirable Features for Decomposition – "Global" Design Criteria	87
	4.7.5 Decomposition Algorithms	88
4.8	Multivalued Dependencies	90
	4.8.1 Various Forms of Dependencies	90
	4.8.2 Multivalued Dependencies	91
	4.8.3 Fourth Normal Form (4NF)	92
4.9	Remark on Object-Oriented Logical Data Modeling	93
4.10	Basics Of Deductive Databases	94
	4.10.1 Limitation of RA And SQL	94
	4.10.2 Basics of Datalog	94
	4.10.3 Deductive Query Evaluation	97
4.11	Knowledge Representation Meets Databases	99
	Summary	100
	Self-examination Questions	101

References	101
Chapter 5	Retrieval Systems
5.1 Overview	103
5.2 Database Management Systems (DBMS)	104
5.2.1 Basics of Database Management Systems	104
5.2.2 Three Levels of Data Abstraction	104
5.2.3 Schema Versus Instances	105
5.2.4 Data Models	105
5.2.5 Database Languages	106
5.2.6 Components of Database Management Systems	106
5.3 Commercial Languages for Data Management Systems	106
5.3.1 Basic Remarks on Commercial Languages	106
5.3.2 Basic Structure of SQL Query	107
5.3.3 Examples of SQL Queries	107
5.3.4 Writing Simple SQL Queries	108
5.3.5 Working with SQL Programs: General Steps	109
5.3.6 Remarks on Integrity Constraints	109
5.3.7 Aggregate Functions	110
5.3.8 Remarks on Enhancement of SQL	110
5.4 Basics of Physical Database Design	111
5.4.1 Storage Media	111
5.4.2 File Structures and Indexing	112
5.4.3 Tuning Database Schema	113
5.5 An Overview of Query Processing and Transaction Processing	113
5.5.1 Query Processing	113
5.5.2 Basics of Transaction Processing	114
5.5.3 How Transaction Processing is Related to Query Processing	114
5.6 Information Retrieval (IR)	115
5.6.1 Differences Between DBMS and IR Systems	115
5.6.2 Basics of Information Retrieval	115
5.6.3 Web Searching, Database Retrieval, and IR	117
5.7 Data Warehousing	118
5.7.1 Basics of Parallel and Distributed Databases	118
5.7.2 Data Warehousing and Decision Support	120
5.7.3 Middleware	121
5.8 Rule-Based Expert Systems	122
5.8.1 From Data and Information Retrieval to Knowledge Retrieval	122
5.8.2 Deductive Retrieval Systems	123
5.8.3 Relationship with Key Interests in Computational Intelligence	124
5.8.4 Basics of Expert Systems	124
5.8.5 Production System Model	124
5.8.6 Knowledge Engineering	128

5.8.7 Building Rule-Based Expert Systems	129
5.8.8 Some Other Aspects	132
5.8.9 CLIPS: A Brief Overview	133
5.9 Knowledge Management and Ontologies	134
5.9.1 What is Knowledge Management?	134
5.9.2 Information Technology for Knowledge Management	135
5.9.3 Data and Knowledge Management Ontologies	136
Summary	137
Self-examination Questions	137
References	138
Chapter 6 Conceptual Data and Knowledge Modeling	141
6.1 Overview	141
6.2 Entity-Relationship Modeling	141
6.2.1 What is the Entity-Relationship (ER) Approach?	141
6.2.2 A Simple Example	142
6.2.3 Major Constructs	143
6.2.4 Some Important Concepts	143
6.2.5 Design Issues in ER Modeling	144
6.2.6 Mapping ER Diagrams into Relations	145
6.2.7 Keys in Converted Tables	145
6.2.8 An Example: A Banking Enterprise	146
6.2.9 Extended ER Features and Relationship with Object-Oriented Modeling	147
6.3 Remark on Legacy Data Models	148
6.4 Knowledge Modeling for Knowledge Representation	149
6.5 Structured Knowledge Representation	150
6.5.1 Some Important Issues Involved in Knowledge Representation and Reasoning	150
6.5.2 Basics of Structured Knowledge Representation Schemes	151
6.6 Frame Systems	151
6.6.1 Basics of Frames	151
6.6.2 Classes, Subclasses and Instances	152
6.6.3 Inheritance, Multi-Level and Multiple Inheritance	152
6.7 Conceptual Graphs	153
6.7.1 What is a Conceptual Graph?	153
6.7.2 Using Linear Form to Represent Conceptual Graphs	155
6.7.3 Operations	155
6.7.4 Logic-Related Aspects	156
6.7.5 Remarks on Synergy of Frame Systems, Conceptual Graphs and Object Orientation	159
6.8 User Modeling and Flexible Inference Control	159
Summary	160
Self-examination Questions	161
References	161

Part II		
Chapter 7	Reasoning As Extended Retrieval	163
7.1	Overview	163
7.2	Beyond Exact Retrieval	163
7.2.1	Some Forms of Non-Exact Retrieval	163
7.2.2	Basics of Analogical Reasoning	165
7.3	Reasoning as Query-Invoked Memory Re-Organization	166
7.3.1	Reasoning as Extended Retrieval	166
7.3.2	Structure Mapping for Suggestion-Generation	166
7.3.3	Document Storage and Retrieval Through Relational Database Operations	167
7.3.4	Generating Suggestions	177
7.4	Summary	184
	Self-examination Questions	184
	References	185
Chapter 8	Computational Creativity And Computer Assisted Human Intelligence	187
8.1	Overview	187
8.2	Computational Aspects of Creativity	187
8.2.1	Remarks on Creativity	187
8.2.2	Theoretical Foundation for Stimulating Human Thinking	188
8.2.3	Creativity in Decision Support Systems	189
8.3	Idea Processors	190
8.3.1	Basics of Idea Processors	190
8.3.2	Common Components in Idea Processors	192
8.3.3	How Idea Processors Work	192
8.3.4	The Nature of Idea Processors	193
8.4	Retrospective Analysis for Scientific Discovery and Technical Invention	195
8.4.1	Retrospective Analysis of Technical Invention	195
8.4.2	Retrospective Analysis for Knowledge-Based Idea Generation of New Artifacts	197
8.4.3	A Prolog Program to Explore Idea Generation	198
8.5	Combining Creativity with Expertise	201
8.5.1	The Need for Combining Creativity with Expertise	201
8.5.2	Strategic Knowledge as Knowledge Related to Creativity	201
8.5.3	Studying Strategic Heuristics of Creative Knowledge	203
8.5.4	Difficulties and Problems in Acquiring Strategic Heuristics	204
8.5.5	The Nature of Strategic Heuristics	205
8.5.6	Toward Knowledge-Based Architecture Combining Creativity and Expertise	206

Summary	207	
Self-examination Questions	208	
References	208	
Chapter 9	Conceptual Queries and Intensional Answering	211
9.1	Overview	211
9.2	A Review of Question Answering Systems	211
9.2.1	What is a Question Answering System?	211
9.2.2	Some Features of Question Answering	212
9.3	Intensional Answering and Conceptual Query	212
9.3.1	Meaning of Intensional Answers	213
9.3.2	Intensional Answering Using Knowledge Discovery	213
9.3.3	Conceptual Query Answering	215
9.3.4	Duality Between Conceptual Queries and Intensional Answers	216
9.4	An Approach for Intensional Conceptual Query Answering	218
9.4.1	Introduction	218
9.4.2	Constructing an Abstract Database for Intensional Answers	219
9.4.3	Generating Intensional Answers for Conceptual Queries	221
9.4.4	Method for Intensional Conceptual Query Answering	222
Summary		223
Self-examination Questions		223
References		223
Part III		
Chapter 10	From Machine Learning to Data Mining	225
10.1	Overview	225
10.2	Basics of Machine Learning	226
10.2.1	Machine Learning: Definition and Approaches	226
10.3	Inductive Learning	227
10.3.1	Generalization for Induction	227
10.3.2	Candidate Elimination Algorithm	227
10.3.3	ID3 Algorithm and C4.5	228
10.4	Efficiency and Effectiveness of Inductive Learning	232
10.4.1	Inductive Bias	232
10.4.2	Theory of Learnability	232
10.5	Other Machine Learning Approaches	233
10.5.1	Machine Learning in Neural Networks	233
10.5.2	Evolutionary Algorithms for Machine Learning	235
10.5.3	Summary of Machine Learning Methods	239
10.6	Features of Data Mining	239
10.6.1	The Popularity of Data Mining	239
10.6.2	KDD versus Data Mining	240
10.6.3	Data Mining versus Machine Learning	242
10.6.4	Data Mining versus Extended Retrieval	243

10.6.5	Data Mining versus Statistic Analysis and Intelligent Data Analysis	244
10.6.6	Data Mining Mechanism: Data Mining from a Database Perspective	245
10.6.7	Summary of Features	245
10.7	Categorizing Data Mining Techniques	246
10.7.1	What is to be Discovered	246
10.7.2	Discovery or Prediction	246
10.7.3	Symbolic, Connectionism and Evolutionary Algorithms	247
10.7.4	Classifying Data Mining Techniques	247
10.8	Association Rules	248
10.8.1	Terminology	248
10.8.2	Finding Association Rules Using Apriori Algorithm	251
10.8.3	More Advanced Studies of Association Rules	253
	Summary	255
	Self-examination Questions	255
	References	256
Chapter 11	Data Warehousing, OLAP and Data Mining	261
11.1	Overview	261
11.2	Data Mining in Data Warehouses	262
11.3	Decision Support Queries, Data Warehouse and OLAP	263
11.3.1	Decision Support Queries	263
11.3.2	Architecture of Data Warehouses	264
11.3.3	Basics of OLAP	266
11.4	Data Warehouse as Materialized Views and Indexing	270
11.4.1	Review of a Popular Definition	270
11.4.2	Materialized Views	271
11.4.3	Maintenance of Materialized Views	273
11.4.4	Normalization and Denormalization of Materialized Views	274
11.4.5	Indexing Techniques for Implementation	275
11.5	Remarks on Physical Design of Data Warehouses	277
11.6	Semantic Differences Between Data Mining and OLAP	278
11.6.1	Different Types of Queries can be Answered at Different Levels	278
11.6.2	Aggregation Semantics	279
11.7	Nonmonotonic Reasoning in Data Warehousing Environment	282
11.8	Combining Data Mining and OLAP	283
11.8.1	An Architecture Combining OLAP and Data Mining	283
11.8.2	Some Specific Issues	284
11.9	Conceptual Query Answering in Data Warehouses	288
11.9.1	Materialized Views and Intensional Answering	288
11.9.2	Rewriting Conceptual Query using Materialized Views	289
11.10	Web Mining	290

11.10.1	Basic Approaches for Web Mining	290
11.10.2	Discovery Techniques on Web Transactions	291
	Summary	293
	Self-examination Questions	293
	References	293
Chapter 12	Reasoning Under Uncertainty	297
12.1	Overview	297
12.2	General Remarks on Uncertain Reasoning	298
12.2.1	Logic and Uncertainty	298
12.2.2	Different Types of Uncertainty and Ontologies of Uncertainty	299
12.2.3	Uncertainty and Search	300
12.3	Uncertainty Based on Probability Theory	301
12.3.1	Basics of Probability Theory	301
12.3.2	Bayesian Approach	302
12.3.3	Bayesian Networks	303
12.3.4	Bayesian Network Approach for Data Mining	307
12.3.5	A Brief Remark on Influence Diagram and Decision Theory	310
12.3.6	Probability Theory with Measured Belief and Disbelief	311
12.4	Fuzzy Set Theory	314
12.4.1	Fuzzy Sets	314
12.4.2	Fuzzy Set Operations	317
12.4.3	Resolution in Possibilistic Logic	319
12.5	Fuzzy Rules and Fuzzy Expert Systems	320
12.5.1	Fuzzy Relations	320
12.5.2	Syntax and Semantics of Fuzzy Rules	321
12.5.3	Fuzzy Inference Methods	324
12.6	Using FuzzyCLIPS	326
12.7	Fuzzy Controllers	328
12.7.1	Basics of Fuzzy Controller	327
12.7.2	Building Fuzzy Controller Using FuzzyCLIPS	329
12.7.3	Fuzzy Controller Design Process	332
12.8	The Nature of Fuzzy Logic	335
12.8.1	The Inconsistency of Fuzzy Logic	336
12.8.2	Why Fuzzy Logic has been Successful in Expert Systems	336
12.8.3	Implication to Mainstream Computational Intelligence	337
	Summary	337
	Self-examination Questions	338
	References	339
Chapter 13	Reduction and Reconstruction Approaches for Uncertain Reasoning and Data Mining	341
13.1	Overview	341

13.2	The Reduction-Reconstruction Duality	341
13.2.1	Reduction and Reconstruction Aspects in Fuzzy Set Theory	341
13.2.2	Reconstruction and Data Mining	342
13.3	Some Key Ideas of K-systems Theory and Rough Set Theory	343
13.3.1	Reconstructability Analysis using K-systems Theory	343
13.3.2	Reduction-Driven Approach in Rough Set Theory	344
13.3.3	K-Systems Theory versus Rough Set Theory	345
13.4	Rough Sets Approach	345
13.4.1	Basic Idea of Rough Sets	345
13.4.2	Terminology	346
13.4.3	An Example	347
13.4.4	Rule Induction Using Rough Set Approach	349
13.4.5	Applications of Rough Sets	350
13.5	K-systems Theory	351
	Summary	353
	Self-examination Questions	354
	References	354
Part IV		
Chapter 14	Toward Integrated Heuristic Decision Making	357
14.1	Overview	357
14.2	Integrated Problem Solving	357
14.3	High Level Heuristics for Problem Solving and Decision Support	359
14.3.1	A Return to General Problem Solver	359
14.3.2	Some High Level Heuristics	359
14.3.3	Summary of Heuristics	364
14.4	Meta-Issues for Decision Making	364
14.4.1	Meta Issues in Databases and Data Warehouses	364
14.4.2	Meta-Knowledge and Meta-Reasoning	366
14.4.3	Meta-Knowledge and Meta-Patterns in Data Mining	371
14.4.4	Meta-Learning	373
14.4.5	Summary and Remark on Meta-Issues	373
	Summary	374
	Self-examination Questions	374
	References	375
Index		377
