Springer

Contents

1 Introduction	1
2 Foundations	7
2.1 Definitions	7
2.2 Applications of Mobile Robots	10
2.3 History of Mobile Robotics: Early Implementations	11
2.4 History of Mobile Robotics: Control Paradigms	13
2.5 Further Reading	20
3 Robot Hardware	23
3.1 Robot Sensors	23
3.2 Robot Actuators	38
3.3 Example: The Mobile Robot <i>FortyTwo</i>	40
3.4 The Need for Sensor Signal Interpretation	41
3.5 Further Reading	42
4 Robot Learning: Making Sense of Raw Sensor Data	43
4.1 Introduction	43
4.2 Learning Methods in Detail	48
4.3 Further Reading on Learning Methods	68
4.4 Case Studies of Learning Robots	69
4.5 Exercise 3: A Target-Following, Obstacle-Avoiding Robot	85
5 Navigation	87
5.1 Principles of Navigation	87
5.2 Fundamental Navigation Strategies of Animals and Humans	92
5.3 Robot Navigation	102
5.4 Case Studies of Navigating Robots	107
6 Simulation: Modelling Robot-Environment Interaction	153
6.1 Motivation	153
6.2 Fundamentals of Computer Simulation	154
6.3 Alternatives to Numerical Models	158
6.4 Case Study on Simulation of Robot-Environment Interaction	160

7 Analysis of Robot Behaviour	167
7.1 Motivation	167
7.2 Statistical Analysis of Robot Behaviour	169
7.3 Case Studies of Performance Evaluation and Analysis	181
7.4 Summary	210
8 Outlook	213
8.1 Achievements	213
8.2 Reasons for Success	214
8.3 Challenges	214
8.4 The Beginning	217
8.5 Further Reading	217
Answers to Exercises	219
1 Sonar Sensors	219
2 Robot Learning	220
3 Error Calculations and Contingency Table Analysis	222
4 Analysis of Categorical Data	223
List of Exercises and Case Studies	227
References	229
Index	237
