Contents

Series Introduction	xi
Acknowledgements	xiii
1 Introduction	1
1.1 THE LAGUERRE MODEL: PROCESS IDENTIFICATION FROM STEP RESPONSE DATA	1
1.2 USE OF PRESS FOR MODEL STRUCTURE SELECTION IN PROCESS IDENTIFICATION	3
1.3 FREQUENCY SAMPLING FILTERS: AN IMPROVED MODEL STRUCTURE FOR PROCESS IDENTIFICATION	3
1.4 PID CONTROLLER DESIGN: A NEW FREQUENCY DOMAIN APPROACH	5
1.5 RELAY FEEDBACK EXPERIMENTS FOR PROCESS IDENTIFICATION	7
2 Modelling from Noisy Step Response Data Using Laguerre Functions	9
2.1 INTRODUCTION	9
2.2 PROCESS REPRESENTATION USING LAGUERRE MODELS . .	10
2.2.1 Approximation of the process impulse response	10
2.2.2 Approximation of the process transfer function	12
2.2.3 Laguerre model in state space form	14
2.2.4 Generating the Laguerre functions	15
2.3 CHOICE OF THE TIME SCALING FACTOR	17
2.3.1 Modelling errors with respect to choice of p	18
2.3.2 Optimal choice of p	19
2.3.3 Optimal time scaling factor for first order plus delay systems	24
2.4 ESTIMATION OF LAGUERRE COEFFICIENTS FROM STEP RESPONSE DATA	28
2.5 STATISTICAL PROPERTIES OF THE ESTIMATED COEFFICIENTS	35

2.5.1	Bias and variance analysis	35
2.5.2	Some special cases of disturbances	37
2.6	A STRATEGY FOR IMPROVING THE LAGUERRE MODEL . .	42
2.7	MODELLING OF A POLYMER REACTOR	50
2.8	APPENDIX	55
3	Least Squares and the PRESS Statistic using Orthogonal Decomposition	59
3.1	INTRODUCTION	59
3.2	LEAST SQUARES AND ORTHOGONAL DECOMPOSITION . .	60
3.2.1	Least squares for dynamic models	60
3.2.2	Orthogonal decomposition algorithm	61
3.3	THE <i>PRESS</i> STATISTIC	63
3.4	COMPUTATION OF THE <i>PRESS</i> STATISTIC	64
3.5	USE OF <i>PRESS</i> FOR PROCESS MODEL SELECTION	66
3.6	USE OF <i>PRESS</i> FOR DISTURBANCE MODEL SELECTION . .	69
4	Frequency Sampling Filters in Process Identification	75
4.1	INTRODUCTION	75
4.2	THE FREQUENCY SAMPLING FILTER MODEL	76
4.3	PROPERTIES OF THE FSF MODEL WITH FAST SAMPLING .	79
4.4	REDUCED ORDER FSF MODEL	83
4.5	PARAMETER ESTIMATION FOR THE FSF MODEL	87
4.6	NATURE OF THE CORRELATION MATRIX	89
5	From FSF Models to Step Response Models	99
5.1	INTRODUCTION	99
5.2	OBTAINING A STEP RESPONSE MODEL FROM THE FSF MODEL	100
5.3	SMOOTHING THE STEP RESPONSE USING THE FSF MODEL	106
5.4	ERROR ANALYSIS	111
5.5	CONFIDENCE BOUNDS FOR FREQUENCY RESPONSE AND STEP RESPONSE ESTIMATES	115
5.6	GENERALIZED LEAST SQUARES ALGORITHM	119
5.7	INDUSTRIAL APPLICATION: IDENTIFICATION OF A RE- FINERY DISTILLATION TRAIN	120
5.7.1	Process description	120
5.7.2	Dynamic response testing	123
5.7.3	Results	125
5.7.4	Use of <i>PRESS</i> for model structure selection	126

5.7.5	Use of noise models to remove feedback effects	127
5.7.6	Use of confidence bounds for judging model quality . .	128
6	New Frequency Domain PID Controller Design Method	131
6.1	INTRODUCTION	131
6.2	CONTROL SIGNAL SPECIFICATION	132
6.2.1	Specification for stable processes	134
6.2.2	Specification for integrating processes	138
6.3	PID PARAMETERS: LEAST SQUARES APPROACH	142
6.3.1	Illustrative example	144
6.4	PID PARAMETERS: USE OF ONLY TWO FREQUENCIES . . .	148
6.5	CHOICE OF FREQUENCY POINTS	152
6.6	ENSURING A POSITIVE INTEGRAL TIME CONSTANT	155
6.7	SIMULATION STUDIES	157
7	Tuning Rules for PID Controllers	171
7.1	INTRODUCTION	171
7.2	FIRST ORDER PLUS DELAY CASE	171
7.3	EVALUATION OF THE NEW TUNING RULES: SIMULATION RESULTS	181
7.4	EXPERIMENTS WITH A STIRRED TANK HEATER	187
7.5	INTEGRATING PLUS DELAY CASE	192
8	Recursive Estimation from Relay Feedback Experiments	201
8.1	INTRODUCTION	201
8.2	RECURSIVE FREQUENCY RESPONSE ESTIMATION	201
8.3	RECURSIVE STEP RESPONSE ESTIMATION	207
8.3.1	Simulation case study	209
8.3.2	Automated design of an identification experiment . . .	215
	Bibliography	217
	Index	223
