| Preface | xi |
| PART A: THE ESSENTIALS OF MODERN OCEANOGRAPHY | 1 |
| 1 Introduction: basics of oceanography for Earth scientists | 3 |
| 1.1 The limits of oceanography | 3 |
| 1.2 Four or five oceans and many seas | 5 |
| 1.3 Geomorphology of the ocean floor | 8 |
| 1.3.1 Continental margins | 10 |
| 1.3.2 Deep ocean basins | 10 |
| 1.3.3 Mid-ocean ridges | 12 |
| 1.4 Change in the ocean system | 12 |
| 1.5 Studying the oceans | 14 |
| 1.5.1 A short history of oceanography | 14 |
| 1.5.2 Problems and techniques | 15 |
| 1.6 The amazing properties of water | 15 |
| 1.7 Conclusion | 15 |
| 1.8 Summary | 15 |
| 2 The nature of seawater and its importance in ocean processes | 17 |
| 2.1 Introduction | 17 |
| 2.2 Properties of water | 17 |
| 2.2.1 Hydrogen bonding | 17 |
| 2.2.2 The three phases of water | 18 |
| 2.2.3 Heat capacity | 18 |
| 2.2.4 Density | 19 |
| 2.2.5 Thermal expansion | 19 |
| 2.2.6 Water as a solvent | 19 |
| 2.3 Seawater chemical composition | 20 |
| 2.3.1 Categories of composition | 20 |
| 2.3.2 Major constituents | 20 |
| 2.3.3 Minor (or trace) constituents | 20 |
| 2.3.4 Nutrients | 20 |
| 2.3.5 Dissolved gases | 23 |
| 2.3.6 Organic material | 23 |
| 2.4 The chemical and physical structure of the oceans | 23 |
| 2.4.1 Salinity | 23 |
| 2.4.2 Temperature | 24 |
| 2.4.2.1 Temperature and latitude | 24 |

| | | |
|----------|---|-----------|
| 2.4.2.2 | Vertical distribution of temperature | 26 |
| 2.4.3 | Density | 27 |
| 2.5 | Ocean–air interface | 28 |
| 2.6 | Conclusion | 28 |
| 2.7 | Summary | 28 |
| 3 | The movement of ocean waters | 31 |
| 3.1 | Introduction – the perspective of seawater circulation | 31 |
| 3.2 | Surface ocean circulation | 33 |
| 3.2.1 | General features | 33 |
| 3.2.2 | Effects of atmospheric circulation patterns | 34 |
| 3.2.3 | Coriolis effect: principles | 37 |
| 3.2.4 | Coriolis effect in oceans: ocean gyres, Ekman transport and upwelling | 39 |
| 3.2.5 | Seasonal variation: the Asian monsoon | 41 |
| 3.2.6 | The geostrophic model of ocean flow | 42 |
| 3.2.7 | Western boundary intensification | 43 |
| 3.2.8 | Importance of eddies | 43 |
| 3.2.9 | Special conditions in the Antarctic region | 45 |
| 3.2.10 | Waves and tides | 45 |
| 3.3 | Deep ocean circulation | 47 |
| 3.3.1 | Formation of new water masses and their properties | 47 |
| 3.3.2 | Thermohaline circulation | 51 |
| 3.3.3 | The global conveyor in perspective | 53 |
| 3.3.4 | Circulation in the Mediterranean, and basin outflow | 55 |
| 3.4 | El Niño, the ultimate interactive system? | 57 |
| 3.5 | Conclusion | 58 |
| 3.6 | Summary | 58 |
| 4 | Crust–ocean interactions | 59 |
| 4.1 | Introduction: the nature of crust–ocean interactions | 59 |
| 4.2 | Oceanographic relevance of the Earth’s structure and behaviour | 59 |
| 4.2.1 | Basic features | 59 |
| 4.2.1.1 | Isostasy | 60 |
| 4.2.1.2 | Isostatic rebound in the Baltic area | 63 |
| 4.2.2 | Interactions of continental and oceanic crust | 65 |
| 4.2.3 | The oceanographic significance of plate tectonic activity | 66 |
| 4.3 | The global crustal–ocean system | 68 |
| 4.3.1 | The ocean steady state | 68 |
| 4.3.2 | Dynamics of seawater–crust interchange | 69 |
| 4.3.3 | Vertical and horizontal distribution of dissolved ocean constituents, and removal mechanisms | 71 |
| 4.3.4 | Exceptions to the rule of constant proportions | 72 |
| 4.3.5 | Seawater oxygenation; the importance of the Black Sea model | 72 |
| 4.3.6 | The seawater CO ₂ system | 76 |
| 4.3.7 | Diagenesis | 76 |
| 4.3.7.1 | Principles | 76 |
| 4.3.7.2 | Early diagenesis | 76 |
| 4.3.7.3 | Burial diagenesis | 77 |

| | | |
|----------|---|-----------|
| 4.4 | Conclusion | 78 |
| 4.5 | Summary | 78 |
| 5 | Marine sedimentary deposits | 79 |
| 5.1 | Introduction | 79 |
| 5.2 | Types of sedimentary deposits | 79 |
| 5.3 | Distribution of sedimentary deposits in oceans | 82 |
| 5.4 | Continental margin marine sedimentary deposits | 83 |
| | 5.4.1 Shallow water marine clastics | 83 |
| | 5.4.2 Slopes | 86 |
| | 5.4.3 Carbonate platforms | 87 |
| 5.5 | Ocean basin sedimentary deposits: clays and oozes | 87 |
| | 5.5.1 Pelagic clays | 87 |
| | 5.5.2 Biogenic calcareous oozes | 87 |
| | 5.5.3 Biogenic siliceous oozes | 88 |
| 5.6 | Calcium carbonate precipitation, seawater buffering, and the carbonate compensation depth (CCD) | 89 |
| | 5.6.1 Calcium carbonate precipitation and buffering | 89 |
| | 5.6.2 CCD | 92 |
| 5.7 | Orthochemical sedimentary deposits | 93 |
| | 5.7.1 Evaporites | 93 |
| | 5.7.2 Metalliferous sediments and hydrothermal deposits | 93 |
| | 5.7.3 Fe-Mn nodules and Fe crusts | 95 |
| | 5.7.4 Phosphorites, barite and glauconite | 95 |
| 5.8 | Volcaniclastic marine deposits | 95 |
| 5.9 | Conclusion | 96 |
| 5.10 | Summary | 96 |
| 6 | Marine ecosystems and oceanography | 97 |
| 6.1 | Introduction | 97 |
| 6.2 | Fundamentals of marine ecosystems | 97 |
| | 6.2.1 Ocean life | 97 |
| | 6.2.2 Biologically critical features of water | 99 |
| | 6.2.3 Ocean habitats | 99 |
| | 6.2.4 Ecosystem operations | 101 |
| 6.3 | Ocean communities – process and products | 102 |
| | 6.3.1 Ocean community distribution and tiering | 102 |
| | 6.3.2 Fate of organic carbon | 105 |
| 6.4 | Ocean ecosystem timescales | 108 |
| | 6.4.1 Daily to yearly | 108 |
| | 6.4.2 Longer timescales | 108 |
| | 6.4.3 Unconformities, sedimentation rates and their significance in modern and ancient ocean ecosystems | 108 |
| | 6.4.4 Biogeographic provinces | 110 |
| | 6.4.5 Taphonomy | 111 |
| 6.5 | Conclusion | 111 |
| 6.6 | Summary | 111 |

| | |
|--|------------|
| PART B: EVOLUTION OF THE OCEANS IN GEOLOGICAL TIME | 113 |
| 7 Studying the oceans in geological time | 115 |
| 7.1 Introduction | 115 |
| 7.2 Sources of information for ocean composition study | 116 |
| 7.3 Where geology and oceanography meet | 117 |
| 7.4 'Would have' and 'may have': the theorists' pets | 118 |
| 8 Precambrian ocean change | 119 |
| 8.1 Introduction: why study the Precambrian ocean? | 119 |
| 8.2 Geological setting of the early ocean | 119 |
| 8.3 Iron, oxygen and life in the ocean waves and elsewhere | 121 |
| 8.3.1 Theories of life's origins and the role of oceans | 121 |
| 8.3.2 Iron and life | 123 |
| 8.3.3 Oxygen, ozone and the ozone shield | 124 |
| 8.3.4 Complications with Precambrian iron formations, oxygen and life | 125 |
| 8.4 Seawater carbonates, evaporites, CO ₂ and a warm Earth | 128 |
| 8.4.1 The faint young Sun paradox | 128 |
| 8.4.2 No change in ocean composition through time? | 129 |
| 8.4.3 The soda ocean – an extreme chemical state of the oceans | 129 |
| 8.4.4 The CaCO ₃ and CaSO ₄ problem and a compromise scenario | 131 |
| 8.4.4.1 CaCO ₃ | 131 |
| 8.4.4.2 CaSO ₄ | 131 |
| 8.4.5 Evidence from terrestrial environments | 133 |
| 8.5 Late Precambrian events | 133 |
| 8.5.1 Strontium isotopes and tectonic change | 133 |
| 8.5.2 BIF and glaciation | 136 |
| 8.6 Ocean change at the Precambrian/Cambrian boundary | 137 |
| 8.6.1 Mg/Ca ratios and the aragonite-calcite seas debate | 137 |
| 8.6.2 Calcium and life | 139 |
| 8.7 Conclusion | 140 |
| 8.8 Summary | 140 |
| 9 Trends in Phanerozoic oceans | 143 |
| 9.1 Introduction: progressive, cyclic and rhythmic change governs the Phanerozoic oceans | 143 |
| 9.2 Background to the Phanerozoic oceans | 143 |
| 9.2.1 Nature of the evidence | 143 |
| 9.2.2 Phanerozoic crustal evolution, and its oceanographic implications | 143 |
| 9.2.3 Key elements of change in Phanerozoic oceans | 149 |
| 9.3 Continental configurations through time and global ocean circulation trends | 149 |
| 9.3.1 Basic patterns | 149 |
| 9.3.2 Circumglobal currents | 150 |
| 9.3.3 Features of opening oceans: example of the Atlantic Ocean | 152 |
| 9.4 CO ₂ and O ₂ : models, measurements and results | 153 |
| 9.4.1 Phanerozoic carbon stores | 153 |
| 9.4.2 Modelling the changes | 155 |

| | | |
|---|---|------------|
| 9.4.3 | Measurements and models: limestone petrology, geochemistry and Sandberg's curve | 156 |
| 9.5 | Matching the curves: greenhouse and icehouse worlds | 157 |
| 9.6 | Phanerozoic ocean biotic change and its controlling factors | 159 |
| 9.6.1 | Basic patterns and problems | 159 |
| 9.6.2 | Diversity controls | 161 |
| 9.6.3 | Complexity in diversity study | 163 |
| 9.6.4 | Carbonate platforms and reefs | 167 |
| 9.7 | Cycles within cycles: ocean change is complex | 168 |
| 9.7.1 | Global and regional cyclicity, and sedimentary sequences | 168 |
| 9.7.2 | Tectono- and glacio-eustasy | 169 |
| 9.7.2.1 | Silurian reef cycles | 169 |
| 9.7.2.2 | Carboniferous change | 171 |
| 9.7.2.3 | Permian carbonate–evaporite sequences of the North Sea area | 173 |
| 9.7.3 | Splendid insolation: orbital forcing and ocean processes revealed by small-scale features | 175 |
| 9.8 | Conclusion | 179 |
| 9.9 | Summary | 179 |
| 10 | Short-term changes in Phanerozoic oceans | 185 |
| 10.1 | Introduction | 185 |
| 10.2 | Catastrophes, organisms and ocean systems | 185 |
| 10.3 | Oceans and glaciations I: the enigmatic Late Ordovician event | 186 |
| 10.3.1 | The Late Ordovician rock record | 186 |
| 10.3.2 | Late Ordovician sedimentary geochemistry | 188 |
| 10.4 | Oceans and glaciations II: the Late Quaternary Younger Dryas cooling and related events | 193 |
| 10.5 | Ocean change and anoxia I: principles | 196 |
| 10.5.1 | Background: general patterns of modern ocean oxygen deficiency | 196 |
| 10.5.2 | Recent and modern ocean oxygen deficiency: records from the California Borderland Silled Basins | 199 |
| 10.5.3 | A warning for palaeoceanography: modern diatom oozes | 202 |
| 10.6 | Oceans and anoxia II: Oceanic Anoxic Events (OAEs) | 203 |
| 10.7 | Oceans and anoxia III: the end-Permian mass extinction | 203 |
| 10.8 | Other extinctions | 208 |
| 10.9 | Salinity fluctuations: the Messinian salinity crisis | 210 |
| 10.10 | Oceans and earthquakes | 213 |
| 10.11 | Conclusions | 214 |
| 10.12 | Summary | 214 |
| PART C: HUMAN IMPACTS ON THE OCEAN SYSTEMS | | 217 |
| 11 | Degradation of the marine environment | 219 |
| 11.1 | Introduction | 219 |
| 11.2 | Marine pollution: the nature of the problem | 219 |
| 11.3 | Marine pollution I: nutrients | 219 |
| 11.3.1 | Nutrients and environmental change | 219 |

| | | |
|---|---|------------|
| 11.3.2 | Nutrients in the North Sea and Baltic Sea | 221 |
| 11.3.3 | Red tides | 223 |
| 11.4 | Marine pollution II: anthropogenic radionuclides | 223 |
| 11.5 | Marine pollution III: heavy metals | 224 |
| 11.5.1 | Heavy metal toxicity | 224 |
| 11.5.2 | Heavy metal dispersal | 225 |
| 11.5.3 | Heavy metals and the estuarine filter | 225 |
| 11.6 | Marine pollution IV: bioaccumulation of pesticides and PCBs | 226 |
| 11.7 | Overexploitation of biological resources – ‘over-fishing’ | 229 |
| 11.7.1 | The scale of the problem | 229 |
| 11.7.2 | The way forward, and the role of aquaculture | 230 |
| 11.8 | Coral reefs | 231 |
| 11.9 | Marine protection: the legal framework | 231 |
| 11.10 | Conclusion | 232 |
| 11.11 | Summary | 232 |
| 12 | Ocean systems and the anthropogenic greenhouse | 235 |
| 12.1 | Introduction: the greenhouse in perspective | 235 |
| 12.2 | The anthropogenic greenhouse effect | 235 |
| 12.3 | Response of the ocean system | 237 |
| 12.3.1 | Impacts of global warming on the oceans | 237 |
| 12.3.2 | The oceans as mediators of climate change | 237 |
| 12.3.3 | Negative feedback processes | 238 |
| 12.3.4 | Positive feedback in the oceans: amplification of climate change and the ‘Clathrate gun’ hypothesis | 238 |
| 12.4 | Current evidence for changes in the ocean system | 239 |
| 12.5 | Relationship between coral reefs and CO ₂ | 239 |
| 12.6 | Conclusion | 240 |
| 12.7 | Summary | 240 |
| 13 | Conclusion: an earth science perspective of the oceans | 242 |
| Appendix: Chemistry for oceanographers | | 244 |
| A.1 | Do you have chemistry phobia? If so read on | 244 |
| A.2 | Jargon-busting: the components of chemistry | 244 |
| A.3 | Important chemicals in oceanographic studies | 248 |
