Contents

Introduction	1
PART I Access Programming 101	3
Hour 1 What's New in Access 2000	5
Customizing Menus and Toolbars	6
Using the More Menu Item	6
Personalizing Menus and Toolbars	7
Assigning Hyperlinks to Menus and Toolbars	8
Spell Checking Data	9
Collaborating Online	10
Setting Up NetMeeting	11
So You're Connected. Now What?	11
Introducing ActiveX Data Objects	12
Introducing a New Object for Database Security—ADOX	12
Access 2000 Supports Stored Procedures	12
Programming Objects	13
Adding Data to Web Pages	13
Introducing Access Projects	14
Summary	14
Q&A	15
Workshop	15
Quiz	15
Exercises	16
Hour 2 Exploring VBA	17
Understanding How Access VBA Works	18
Learning Access VBA Keywords	18
Access Operators and Operands	20
Data: What a Program Knows	22
Putting It All Together	23
Arithmetic Operators	23
Comparison Operators	24
Logical Operators	25
String Concatenation Operators	26
Prelude to Advanced Topics	27
Summary	28
Q&A	28
Workshop	29
Quiz	29
Exercises	29

Hour 3 Storing Your Program's Data	31
How Memory Is Used	32
Declaring Variables	33
Dim Variables	33
ReDim Variables	34
Const Variables	35
Global Variables	35
Data Assignment and Evaluation	36
Be Explicit	37
Variant Data Types	37
Implicit Variable Declaration	38
Option Explicit	38
Using Pop-up Hints	39
Setting Up Test Code	39
Debugging and Using Pop-up Hints	40
Using the Locals Window	41
Using a Watch Window	42
Adding a Watch	43
Editing Watches	44
Using Quick Watches	44
Running Code in the Immediate Window	45
Summary	46
Q&A	47
Workshop	47
Quiz	47
Exercises	47
Hour 4 Controlling Program Flow and Performing Calculations	49
What Goes into an Equation	50
Equation Data	50
Rules of the Road	53
Understanding Operator Count	54
Using Arithmetic Operators	54
Performing Comparisons	55
The Truth of Logical Operators	57
And	58
Eqv	59
Imp	60
Or	60
Xor	60
Not	60
Bitwise Operations	60
Concatenate It	62
Who Has Precedence Here?	63

Special Operators	64
Using the Is Operator	64
Pattern Matching with Like	64
AddressOf Operations	65
Summary	65
Q&A	66
Workshop	66
Quiz	66
Exercises	66

PART II Writing Code to Manage Your Access Data 67

Hour 5 Learning to Write Conditional Code 69

A Programmer's Traffic Cop	70
Using Else	72
Nesting Conditional Statements	73
Housekeeping	74
Tidying Up Nested Conditional Statements	74
Want to Go for a Spin?	76
Take It Once Around the Block	77
Iterating Through Data	79
Iterating Forwards and Backwards	80
Ubound and Lbound	82
Iterating Collections of Data	82
Short Circuiting Code	84
Summary	85
Q&A	85
Workshop	85
Quiz	86
Exercises	86

Hour 6 Managing Your Database 87

Creating a Database	88
Defining the Database	88
Create a Table with Access 2000	89
Creating a Module in the Contacts Database	91
Creating a Table with Code	92
Manage a Table with Code	95
Database Terms Refresher Course	95
Accessing Table Information	96
Iteratively Inputting User Data	98
Using Conditional Code to Find Data	99
Summary	101
Q&A	101

Workshop	102
Quiz	102
Exercises	102
Hour 7 Using Advanced Data Types to Manage Data	103
Understanding OLE Automation	104
Welcome to the World of Objects	105
Useful Objects	105
Comparing ADO to DAO	106
Using the ADO DB Object	107
Using a Connection	108
Using a Recordset	110
Using the ADOX Object	113
Catalog	113
The ActiveConnection Attribute	114
Tables Collection	115
Groups, Users, and Views	115
Summary	116
Q&A	117
Workshop	117
Quiz	117
Exercises	117
Hour 8 Solving Problems a Piece at a Time	119
The Mechanics of Writing Subroutines	120
Writing the First and Last Lines of Subroutines	121
Naming Subroutines	122
Naming Subroutine Arguments	122
Defining Argument Types	122
The Mechanics of Writing Functions	126
Programming Rules of Thumb	127
Rule 1: Make Recurring Code into a Function	127
Rule 2: Keep Functions Short	128
Rule 3: Strictly Limit the Number of Arguments	128
Rule 4: Use Argument Qualifiers to Inhibit Variable Misuse	128
Rule 5: Use Contract Programming	128
Rule 6: Don't Be Afraid to Comment	129
Tying It All Together	130
Creating a Table with Code	130
Importing a Comma-Delimited Text File	131
Finding a Record	133
Using the Windows API to Read from the Registry	133
Summary	134
Q&A	134

Workshop	135
Quiz	135
Exercises	135
PART III Using Access Resources to Get the Job Done	137
Hour 9 Using Macros as Learning Aids	139
Creating a Macro 101	140
Creating a Table with SQL	140
Creating a Macro	141
Defining Macro Names and Conditional Code	142
Testing and Debugging a Macro	145
Using CopyObject	147
Using DeleteObject	148
The Keys to the City	149
Importing Data	150
Transferring a Database	150
Transferring Text Data	151
Using Macro Resources in Code	154
To Macro or Not to Macro	155
Summary	156
Q&A	156
Workshop	157
Quiz	157
Exercises	157
Hour 10 Employing Access Predefined Solutions	159
Using String-Handling Functions	160
Converting Between String and Numeric Values	160
Dual Type String Functions	161
Searching Strings	164
Dynamically Allocating Strings	165
Formatting Data	165
Using Date and Time Functions	167
Managing File I/O	167
Using Open and Close	168
Reading and Writing Text Data	171
Reading and Writing Binary Data	173
Dynamic User Input Functions	174
Using Function, Method, Property, and Statement References	175
Summary	175
Q&A	176
Workshop	176
Quiz	176
Exercises	176

PART IV Defining Data Types and Using Arrays and Collections	177
Hour 11 Making the Complex Simple: Creating Your Own Data Types	179
Understanding Aggregation	180
Using the Type Declaration	180
What Kind of Data Can Go into My Type?	182
Declaring Instances of User Types	184
Defining Enumerated Types	185
Putting It All Together	187
Summary	187
Q&A	188
Workshop	188
Quiz	188
Exercises	188
Hour 12 Managing Varying Amounts of Data	189
Understanding Arrays	190
Declaring Arrays	191
Declaring Fixed Arrays	191
Declaring Dynamic Arrays	192
Declaring Static Arrays	193
Setting Array Base Indexes	193
Using Arrays to Store Data	194
Functions for Managing Arrays	196
Returning Arrays from a Function	198
Things You Should Do When Using Arrays	199
Sorting Array Data	199
Bubble Sorting an Array of Strings	199
Selection Sorting Arrays	201
Quick Sorting Arrays	202
Summary	204
Q&A	205
Workshop	205
Quiz	205
Exercises	205
Hour 13 Storing Information in a Collection	207
Understanding Collections	208
Uses for Collections	208
The Terminology of Object-Oriented Programming	208
Declaring Collection Variables	210
Managing a Data Collection	211
Adding Data to a Collection	212
Removing Data from a Collection	214

Using the Item Method and Count Property	214
Iterating Through a Collection with For Each Loops	215
Places You'll Find Collections	216
Summary	216
Q&A	216
Workshop	217
Quiz	217
Exercises	217

PART V Database Programming in Access 219

Hour 14 Managing Your Code 221

Naming Conventions	222
Meaning Is Conveyed with Whole Words	224
Pairing Verbs and Nouns Makes Subroutines and Functions Clear	224
Avoid Nonstandard Abbreviations	225
Using White Space Consistently	225
Managing Complexity	227
Avoid Nesting Conditional Statements	228
Use Procedures to Implement Conditional Code	228
Keep Procedures Short and to the Point	229
Commenting Guidelines	230
Write Comments in Complete Sentences	230
Comment Lengthy Code	230
Comment Ambiguous Code or Code Copied from an External Source	231
Understanding the Benefits of Code Reuse	231
Testing and Debugging	232
Managing Data	232
Summary	232
Q&A	233
Workshop	233
Quiz	233
Exercises	234

Hour 15 Data Programming Made Easy with ADODB 235

Connecting to a Database	236
Open Connection Arguments	238
Creating an ODBC Alias	239
What Is a Provider?	241
Specifying a Username and Password	242
Selecting a Connection Mode	242
Managing a Recordset	243
Opening and Closing Recordsets	243
The Ingredients in a Recordset	245

Adding and Updating Data	247
Modifying Field Data	249
Deleting Data	250
Finding Records	251
Using a Table	251
Using a Query	253
Using the Filter Property	254
Adding Data to a Collection	254
Finding ActiveX Data Object Resources Online	256
Summary	256
Q&A	257
Workshop	257
Quiz	258
Exercises	258
Hour 16 Using Advanced SQL Techniques	259
Using the SELECT Statement	260
Writing a Simple SELECT Statement	261
Filtering the Recordset with the WHERE Clause	262
Operators for the WHERE Clause	263
Using Nested SELECT Statements in WHERE Clauses	265
Sorting Queries	266
Grouping Columns	267
Using the HAVING Clause to Filter Result Sets	267
Joining Tables	268
Creating a UNION of Tables	270
Defining a Column Alias	271
Inserting New Data	271
Inserting into Specified Fields Only	272
Inserting into Implied Fields	272
Inserting with Parameters	273
Inserting from a Table with SELECT	274
Updating Data	274
Deleting Data	276
Calling Functions in SQL Code	277
Writing Stored Procedures	277
Adding a Stored Procedure to a Catalog	278
Executing a Stored Procedure	279
Summary	280
Q&A	281
Workshop	281
Quiz	281
Exercises	282

PART VI Mastering Error Handling	283
Hour 17 Removing Bugs	285
Scaffolding	286
Why Scaffolding Early Is Important	287
Understanding What to Look For	287
How to Scaffold Access Code	288
Trapping Code	289
What Is a Trap?	290
Using Traps	290
Tracing Code	291
Asserting Assumptions	293
Contract Programming	294
Reusing the Debugging Techniques	294
Using Compiler Directives	294
Making Debug Code Read-Only	299
Development Versus Deployment Error Handling	299
Summary	299
Q&A	300
Workshop	301
Quiz	301
Exercises	301
Hour 18 Adding Code to Handle Errors	303
Comparing Error-Handling Styles	304
Conditional Error Checking: The Old Way	304
Exception Handling: A Better Way	305
Writing Error Handlers	306
Starting an Error Handler	306
General Rules for Error Handlers	308
Clearing the Error Handler	308
Writing Silent Error Handlers	309
Using Resume in an Error-Handling Block	309
Using Resume Next in an Error Handling Block	311
Using the Err Object	311
Err Object Properties	311
Err Object Methods	312
Using Error Handlers to Validate User Input	312
Creating the Resource Protection Block Idiom	314
Reviewing the Debug Object	315
Summary	315
Q&A	315

Workshop	316
Quiz	316
Exercises	316
PART VII Creating Access User Interfaces	317
Hour 19 Creating Custom Forms	319
Using Form Wizards	320
An Overview of Each Form Design Type	320
Creating a Form with the Form Wizard	322
Using Data Management Menu Items	326
Filtering Form Records	326
Customizing Wizard Forms	329
Understanding the Three Facets of Visual Objects	329
Adding Controls to Your Form	334
Writing Code	335
Testing Your Form	336
Setting the Startup Point for Your Program	337
Summary	337
Q&A	338
Workshop	339
Quiz	339
Exercises	339
Hour 20 Adding Data to Web Pages	341
Comparing Intranets to Internets	342
Installing and Running Personal Web Server	343
Establishing a Web Site	344
Understanding Web Pages	344
What Is a Data Access Page?	345
Advanced Web Page Topics	346
Building the Database Used for the Demo	346
Using Wizards to Generate Web Pages	348
Defining a Multiple Table Query	349
Using the Page Wizard	349
Using Web Page Design Tools	351
Taking a Tour of Data Access Page Menus and Toolbars	351
Adding a Control to a Data Access Page	354
Using the Properties Dialog	354
Binding a Field to a Control	355
Sorting and Grouping Data	355
Summary	357
Q&A	357

Workshop	358
Quiz	358
Exercises	358
PART VIII Object-Oriented Programming in Access	359
Hour 21 Class Programming Basics	361
Understanding the Need for Classes	362
Creating Your First Class	363
Hiding Information to Make Code Easier to Use	365
Defining Class Methods	367
Defining Properties	369
Using Object Properties	372
Using Static Properties	372
Writing Initialization and Termination Code	373
Writing a New Class	374
Testing Classes	377
Extending Existing Classes	377
Creating an Instance of a Class	377
Summary	378
Q&A	379
Workshop	379
Quiz	379
Exercises	380
Hour 22 Adding Capabilities to Your Data Types	381
Defining the Objective	382
Understanding When to Write a Class	382
Applying Basic Principles of Object-Oriented Design	383
Naming What the Class Must Do and Know	384
Tips for Implementing Classes	385
Extending Existing Classes	386
Using a Collection to Store the Associative Array Data	386
Implementing the File Streaming Capabilities	389
Testing Your New Class	391
Using the Strings Class	392
Summary	392
Q&A	393
Workshop	393
Quiz	394
Exercises	394

Hour 23 Access Add-Ins	395
Introducing Add-ins	396
Defining an Error-Logging Database	397
Adding Code to Create the Table Dynamically	398
Logging Exceptions to the Database	399
Defining a Viewer for the Error Log	401
Testing the Error-Logging Database Add-In Database	401
Installing and Uninstalling Add-ins	403
Creating the Registry Information Table	405
Installing the Add-in	406
Uninstalling an Add-in and Modifying Add-ins	406
Going for a Test Drive	407
Summarizing the Process	407
Summary	408
Q&A	408
Workshop	409
Quiz	409
Exercises	409
Hour 24 Managing Outlook Contact Information	411
Understanding Outlook 2000	412
Introducing the Outlook Object Model	412
Creating an Instance of Outlook	413
Using Namespaces	414
Using a Folder	415
Viewing Outlook Contacts in Access	417
Updating Outlook Information	418
Searching the Body of a Mail Item	420
Undeleting Mail Items	421
Sending Mail to Contacts Automatically	422
Summary	423
Q&A	423
Workshop	424
Quiz	424
Exercises	424
PART IX Appendixes	425
APPENDIX A Answers	427
Index	455
