

**PETER
NORTON'S**

**Complete Guide to
Microsoft®**

Windows® 2000 Server

- Everything you need to know about Windows 2000 Server—in plain English!
- Discover the underlying architecture of Windows 2000 Server from the inside out, from the administrator's point of view

Suranaree University of Technology

31051000651717

performance, compatibility, troubleshooting,

- Learn all of the new and dramatically enhanced features of Windows 2000 Server

Introduction	1
---------------------	----------

PART I INTRODUCING WINDOWS 2000 SERVER	3
---	----------

1 Choosing Windows 2000 Server	5
A Little History	5
Why Use Windows 2000 Server?	6
It's a Better Product Than NT	7
Understanding the Server Versions	8
What's New in Windows 2000 Server?	9
Directory Improvements	9
Kernel Improvements	10
File System Improvements: NTFS5 ..	11
Management Improvements	13
Security Improvements	14
Network Improvements	14
Domain Naming Service (DNS).....	16
Remote Access Server (RAS).....	17
Terminal Services	17
Message Queuing Services (MQS)....	17
Component Services	17
Summary	17
2 Installing Windows 2000 Server	19
Deciding Which Server Version to Install	19
Scenario 1: Installing the Standard Server	19
Scenario 2: Installing the Advanced Server	19
Scenario 3: Installing the Datacenter Server	20
Preparing for Installation	20
Choosing Licensing Options.....	21
Checking Your Hardware	22
Creating a Feature Checklist.....	22
Installing from a CD-ROM or DVD-ROM	23
Installing from Setup Disks and Floppy Drive	25
Installing from a Network.....	29

Upgrading to Windows 2000 Server	30
Upgrading from Windows NT	31
Running the Setup Program Out of	
Windows NT 4.0	32
Migrating from Novell NetWare.....	33
Summary	36

PART II INSIDE WINDOWS 2000 SERVER 37

3 Windows 2000 Subsystems 39

Executive Services	40
Managers	41
Device Drivers	44
The Hardware Abstraction Layer	
(HAL)	44
The Kernel	45
User Mode Operations and	
Environmental Subsystems	45
The Win32 Subsystem	46
The Posix Subsystem	47
The OS/2 Subsystem.....	48
Integral Subsystem	48
Memory Model and Management	48
Summary	50

4 Exploring the Interface 51

User Profiles	52
Local, Roaming, and Mandatory	52
Windows Explorer	53
Copying Files and Folders	53
The Startup Folder	54
Customizing the Server Desktop	56
Accessibility Wizard	58
Taskbar	60
Passwords	62
Desktop Settings	63
Clock	66
Windows 2000 Shortcuts	67
Working with File and Print Servers	69
Managing Shared Folders	69
Using the Shared Folder Wizard.....	73
Managing Printers.....	73
Summary	76

5 Active Directory Concepts and Features 77

Overview	77
Key Concepts	79
Schema	79
Scope	79
Namespace	79
Object	80
Container	80
Tree	81
Name	81
Partitions	82
Domains	82
Domain Trees	83
Domain Forests	83
Sites	83
Active Directory Architecture	83
Industry Standard Data Model	84
Integrated Schema.....	84
Flexible Administration	84
Detailed Security Model	84
Active Directory Features	85
Domain Name Service (DNS)	
Integration	85
Scalability	85
Extensible Schema	86
Global Catalog	86
Multimaster Replication	87
Supporting Established Standards	87
DNS.....	88
LDAP	88
X.500.....	88
Active Directory Services	
Interfaces (ADSI).....	88
Security.....	89
Object Protection	89
Delegation of Rights	90
Inheritance of Rights.....	90
Administration Tools	90
Migrating from Windows NT to	
Active Directory	90
Comparing Active Directory to	
Novell's NDS.....	93
Scalability	93
Rights Inheritance	93

Internet Standards	94
Third-Party Support	94
Spanning Groups Across Partitions ..	94
Summary	94
6 The Windows 2000 File System	95
Hard Drive and Controller Choices	96
Taking Control	97
Beyond the Communications	
Format	100
Hard Drives	104
File System Formats	107
High-Performance File System (HPFS)	107
File Allocation Table (FAT) and FAT32	107
NTFS 4.0 and NTFS5	109
Disk Administration in	
Windows 2000 Server	110
Dynamic Volumes and Management	110
Encrypting File System (EFS)	115
Disk Quotas	118
NTFS Disk Defragmentation	120
Using the FORMAT Command	122
Summary	123
7 Distributed File System (DFS)	125
The Concepts Behind Distributed	
File Systems	125
Benefits of Using DFS	126
Implementing DFS Trees	128
Security	129
Users and DFS Trees	129
Installing DFS and Administering	
DFS Trees	129
Using the Dfsadmin Tool	130
Nesting DFS Trees	135
Implementing Alternate Replicated Resources	135
Administering DFS from the Command Prompt	137
Summary	138

8 Security	139
Security in Today's Networking	139
Active Directory Enhancements	140
Account Management	141
Two-Way Transitive Trust Relationships	141
Delegation of Administration	142
Fine-Grain Access Rights	143
Security Policy	144
Data Security	144
Client-Friendliness	144
Interoperability	144
Remote Access Concerns	145
Finding Good Help	145
Security Protocols	145
Kerberos Version 5 Authentication Protocol	146
Windows NT LAN Manager Authentication Protocol (NTLM)	146
Public Key-Based Protocols	146
Distributed Password Authentication (DPA)	146
Certificate-Based Security	146
Kerberos Security	148
Weaknesses with NT LAN Manager (NTLM)	148
The Windows 2000 Implementation of Kerberos	149
Summary	151
9 Printing	153
Printing Concepts	154
The Printing Process	156
Creating a Printer	156
Using the Printer Wizard	157
Configuring Your Printer	164
Setting Priority and Scheduling of Printers	168
Managing Print Queues	174
Manipulating Documents in the Queue	175
Setting Priority and Scheduling of Documents	176
Summary	176

PART III USER AND GROUP

MANAGEMENT 177

10 Active Directory Design 179

Review of Active Directory Terms.....	179
Design Considerations	180
Modeling an Organization	
Container Hierarchy	181
Using Active Directory Tools.....	183
Active Directory Users and	
Computers	184
Active Directory Domains and	
Trusts	189
Active Directory Sites and	
Services	189
Summary	190

11 Creating and Managing User Accounts 191

User Accounts	191
Predefined (Default) Users	192
Naming and Password	
Conventions	193
User Environment Needs	200
Controlling the User Environment ..	200
Hard Drive Space	206
Creating Groups	206
When to Create a Group	207
Group Types and Scope	208
Assigning Permissions	210
Adding Users to Groups	211
Adding Members from the Local	
Domain	212
Using Predefined (Local) Groups ..	213
Using Domain Local Groups	213
Built-In Global Groups	215
Hidden or Administrative Groups ..	215
Summary	216

12 Controlling User Environment Through IntelliMirror and Group Policies 217

IntelliMirror	217
Benefits of Using IntelliMirror	218
User Data Management	218
Software Installation and	
Maintenance	219

User Setting Management.....	220
Example of IntelliMirror at Work.....	221
Group Policies	222
Group Policy Objects (GPO)	222
Order of Inheritance	223
Creating Group Policy Objects	224
Specifying Group Policy Settings.....	226
Summary	228

PART IV NETWORK AND APPLICATION SERVICES 229

13 Remote Access Services (RAS) 231

Connection Types and	
Considerations	232
Dial-Up Networking	
Considerations	233
Network-to-Network	
Considerations	234
PSTN Protocol Support	236
Security.....	236
Installing RAS	237
Requirements	237
Protocol Support	239
Modem and Phone Line	
Considerations	242
Administering RAS	245
COM Port Control	246
User Control	246
Summary	248

14 Terminal Services 249

Benefits of Using Terminal Services ..	249
Fat Clients Versus Thin Clients ..	249
Cheaper Desktop Administration ..	250
Setting Up the Server	251
Hardware Requirements	251
Installing Terminal Services	253
Setting Up a Client.....	255
Installing Client Software	255
Using the Client Connection	
Manager	257
Managing Users and User Sessions ..	259
Managing Sessions	260
Managing Users	262
Licensing Terminal Services	263
Summary	263

15	Distributed Processing	265
	Two-Tier Client/Server Architecture	266
	A Simple Model	266
	Weakness of the Two-Tiered Client/Server Architecture	267
	The Three-Tiered Client/Server Architecture	268
	Why a Three-Tiered Architecture Is Necessary	268
	Advantages of a Three-Tiered Architecture	270
	The Internet in a Three-Tiered Architecture	270
	COM and COM+	272
	Microsoft Transaction Services (MTS)	272
	MTS Integration in Windows 2000	273
	Microsoft Message Queuing (MSMQ)	275
	Configuring MSMQ	275
	Combining MTS and MSMQ	276
	Summary	277

PART V THE INTERNET AND WINDOWS 2000 SERVER 279

16	TCP/IP Networking	281
	How TCP/IP Works	281
	The Numbers.....	283
	Address Classes	283
	Installing TCP/IP	284
	Routing	285
	Enabling Routing	286
	Using the Routing Information Protocol (RIP)	288
	Configuring RIP for Internet Protocols.....	288
	Using the Dynamic Host Configuration Protocol (DHCP)	289
	Installing DHCP	289
	Managing DHCP Scopes	296
	Windows Internet Name Service (WINS)	298
	Architecture of Microsoft WINS	298
	Installing WINS	299
	Configuring or Replicating WINS	299

	Setting Up Replication Partners	300
	Adding Static Mappings	306
	LMHOSTS Files	311
	TCP/IP Printing Concepts	312
	Using LPR and LPQ.....	313
	Using DNS Server	314
	About DNS	315
	Installing a DNS Server	317
	Configuring the DNS Server	318
	Adding Host (A) Records	321
	Adding Mail Exchanger (MX) Records.....	322
	Adding Pointer Records	323
	Configuring Dynamic DNS, WINS, and WINS-R.....	323
	Summary	325
17	Virtual Private Networks	327
	Tunneling Protocols	328
	Point-to-Point Tunneling Protocol (PPTP)	330
	Layer 2 Tunneling Protocol (L2TP)	332
	Internet Protocol Security (IPSec)	333
	Administering Virtual Private Networks	336
	Summary	337
18	Internet Information Server 5.0	339
	Back to IIS Basics	340
	HTTP Services	340
	FTP Server	342
	Preparing for Installation	343
	System Requirements	344
	Internet Connectivity	345
	Installing IIS.....	347
	Installation Methods	348
	Testing Your Installation	350
	Configuring and Administering IIS	353
	Tools for Administrating the Server	353
	Configuring the Web Server.....	358
	Creating a New Web Site	358
	Creating Virtual Directories	372
	Using FTP Sites	374
	Creating Multiple Sites with the Same IP Address	378
	Logging Options	379

Security Checklist	383
Using Active Server Pages	383
Using the Indexing Service	384
Microsoft FrontPage 2000 Server	
Extensions	385
Summary	385

19 Other Internet Services 387

Proxy Server	387
Security Features	389
Open Standard Support	389
System Requirements	389
Exchange Server	390
Technical Features	391
Security Features	392
Client Features	392
Server Administration	396
Connecting Beyond Exchange	
Walls	396
Server Requirements	397
Client Requirements	398
Site Server	398
Intranet: Site Server 3.0	398
Internet: Site Server 3.0	
Commerce Edition	399
System Requirements	399
Windows NetMeeting	400
Features of Windows	
NetMeeting	400
Windows NetMeeting	
Requirements	401
Summary	402

PART VI SERVER ADMINISTRATION 403

20 Server Management 405

Using the Computer Management	
Utility	405
Who Can Use Server Manager?	406
Launching the Computer	
Management Snap-in	407
Connecting to a Remote	
Computer	407
Managing Server Properties	408
Starting and Stopping Services	413
Using Event Viewer	414
System Log	415
Security Log	415

Application Log	418
Event-Logging Options	418
Sorting Events	418
Filtering Events	418
Searching for Events	418
Viewing Event Details	418
Archiving Event Logs	419
Viewing a Log Archived in	
Log-File Format	419
Searching a Log for Specific	
Information	419
Using the Registry	422
Registry Hierarchy	422
Hives and Files	423
Value Entries in the Registry	
Keys	424
How the Registry Is Used	425
The Registry Editor	426
Local or Remote Registry	
Administration	427
Running the Registry Editor	
Program	427
Altering Registry Data	428
Remote Registry Administration	428
Restoring Hives from Backup	
Files	429
Protecting the Registry	430
Summary	431

21 Server Backup 433

The Windows 2000 Backup Utility	434
Using the Backup Wizard	435
Restoring Data Using the Restore	
Wizard	440
Scheduling Unattended Backup Jobs	443
Supported Tape Drives	445
Third-Party Programs	445
Summary	446

22 Recovering from a Disaster 447

Have a Plan, Work the Plan	447
Assigning Responsibilities and	
Staff	448
Physical Considerations	449
Data Recovery	451
Creating and Using an Emergency	
Repair Disk (ERD)	451
Backup Operations	453

	A Time-Tested Backup Plan:	
	Grandfather, Father, Son	456
	Choosing to Do a Full Backup	457
	Hardware Fail Over Options	457
	Setting Up Your System for Disk	
	Mirroring	458
	Extending the Disk Striping	
	Method to Include Fault	
	Tolerance	459
	Clustering	460
	Hardware-Controlled RAID	460
	Disaster Recovery Planning	
	Software	461
	Summary	461
23	Optimizing and Tuning Performance	463
	Optimizing Automatically	463
	Avoiding Fragmentation	464
	Prioritizing Processes and	
	Threads	464
	Multiprocessing and	
	Performance	468
	Managing Disk Performance and	
	Reliability	469
	Using Raid-5 and Virtual Memory	
	Pagefiles	470
	Optimizing Virtual Memory	
	Pages	471
	Using the Performance Monitor	473
	Tracking Objects and Object	
	Counters	474
	Using Charts	475
	Using the Alerts View	478
	Creating Reports and Logs	482
	Logging Processor Activity	485
	Monitoring Disk Performance	487
	Summary	488
24	Troubleshooting	489
	If You Have No Idea How to	
	Resolve Your Problem	490
	Using Service Packs	492
	Using the Windows 2000	
	Resource Kit	492
	Windows 2000 Resource Kit	493

Dial-Up Networking Problems	493
Cannot Connect After Dialing with	
Dial-Up Networking	493
Error 692 in RAS	494
Dial-Up Networking Error 640	494
STOP Error Messages	494
Steps for Kernel-Mode STOP	
Screens	495
STOP Error Solutions	498
For Further Information	504
Summary	505

PART VII CONNECTIVITY TO THE NON-MICROSOFT WORLD 507

25	NetWare Connectivity	509
	Microsoft Takes the Lead Once	
	More?	510
	Bindery Services	510
	NetWare Directory Services	
	(NDS)	511
	Objects	511
	Permissions	513
	Groups	513
	Active Directory	514
	NT Connectivity for NetWare	514
	Gateway Service for NetWare	
	(GSNW)	514
	NWLink IPX/SPX-Compatible	
	Protocol	519
	Migrating NetWare Servers to	
	Windows 2000 Server	521
	Installing the DirectoryService	
	Manager	522
	The Novell Side of the Story	525
	Native IP Support in NetWare	525
	Summary	526
26	Macintosh Connectivity	529
	File and Print Services	529
	Macintosh Services	530
	Shared Folders	531
	Remote Access Support	531
	AppleTalk Protocol	531
	Installing Macintosh Services	531

Creating Volume/Shares	533
File Considerations	534
Creating a Macintosh-Accessible Volume	535
Managing Shared Folders	537
Other Management Options	537
Security.....	538
Types of Macintosh Permissions	539
Logons.....	540
Microsoft User Authentication Module (UAM)	541
Configuring AppleTalk Routing Options.....	541
Printing.....	542
Configuring RAS for Macintosh Clients	544
Summary	545
27 SNA Connectivity	547
Host Computing and SNA Basics	547
Relationship Issues in a Host/Terminal Setting	548
Advantages of Terminal Emulation Packages	549
Using Microsoft SNA Server	549
Manageable Secure Connectivity.....	550
Routing and Distributing Connections	551
SNA Server Connectivity.....	553
SDLC	553
X.25.....	554
DFT	554
Adapter Support	554
Summary	554
28 UNIX Connectivity	555
Conceptual Differences	556
Security	557
User Accounts	557
Name Resolution.....	558
NT Connectivity to UNIX Network File Systems.....	560
Network File System (NFS)	560
Andrew File System (AFS)	561
Remote File Sharing (RFS)	561
Products Providing UNIX Connectivity	561
Emulators	561

Printing in a UNIX World	562
Summary	563

PART VII APPENDIXES	565
A Virus Protection	567
Methods of Attack.....	567
Methods of Defense	568
Using ICSA.....	568
B Network Infrastructure	569
Cabling	569
Hubs and Switches	570
Hubs Versus Switches	571
Routers	571
Firewalls	572
Network Design	572
Summary	574
C IP Decimal/Binary/Hexadecimal Conversion Table	575
D Installing SQL Server 7.0	585
Installing SQL Server 7.0	586
Adding the SQL Enterprise Manager Snap-In	588
Creating a Database	589
E Glossary	591
Index	609
