CONTENTS

Preface and Acknowledgements	xi
1 Introduction	1
References	5
2 Calculation of vibration-rotation energy levels: symmetry, transformations, open-shell molecules	7
2.1 Introduction	7
2.2 The non-rotating molecule Hamiltonian and molecular point groups	8
2.3 The rotating molecule Hamiltonian and rotation groups	10
2.4 Permutation-inversion symmetry operations and the molecular symmetry group	14
2.5 The rigid symmetric and asymmetric rotor	18
2.6 Symmetry properties and statistical weights	22
2.6.1 Linear molecules	22
2.6.2 Asymmetric rotor molecules	23
2.6.3 Symmetric rotor molecules	26
2.7 The definition of an effective vibration-rotation Hamiltonian	28
2.8 The semi-rigid asymmetric rotor	30
2.9 Effective Hamiltonians for open-shell molecules	31
2.9.1 Coupling of angular momentum vectors using a cartesian tensor approach	32
2.9.2 Coupling of angular momentum vectors using a spherical tensor approach	39
2.9.3 Interpretation of spin-rotation and spin-spin constants	41
References	42
3 Effective Hamiltonians for flexible or floppy molecules	45
3.1 Introduction	45
3.2 Effective Hamiltonians for internal rotation: hindered rotation in symmetric and asymmetric top molecules containing internal rotors of threefold symmetry	46
3.2.1 Two dissimilar collinear rotors: methyl silane	46
3.2.2 A threefold methyl rotor and a planar asymmetric frame: methanol or acetaldehyde	52
3.3 Local mode modelling of highly excited stretching vibrational states	55
3.4 Direct approaches to solving the vibration-rotation Hamiltonian for small molecules	58
3.5 Large-amplitude motion in a single effective large-amplitude coordinate	60
3.5.1 Bent-linear correlation and large-amplitude vibration	60

3.5.2 Simplified large-amplitude motion in Van der Waals complexes using scattering coordinates	65
3.6 Large-amplitude motion in triatomic molecules: three potentially large-amplitude vibrational motions	69
3.7 Large-amplitude motion in triatomic molecules: one large and two potentially medium-amplitude vibrational motions	74
3.8 Potential energy functions for triatomic molecules	79
References	84
4 Rovibrational line intensities and lineshapes: linear and non-linear spectroscopy	87
4.1 Introduction	87
4.2 Linear absorption spectroscopy	87
4.2.1 The line strength of a vibration-rotation transition	87
4.2.2 Calculation of absorption intensities	88
4.2.3 Calculation of the transformed transition dipole moment	89
4.2.4 Symmetric rotor and linear molecule line strengths	90
4.2.5 Asymmetric rotor line strengths	91
4.2.6 Intensity perturbations	92
4.2.7 Calculations of infrared line intensities	93
4.2.8 Integrated band intensities	94
4.2.9 The calculation of intensities using dipole moment surfaces	94
4.3 Non-linear absorption spectroscopy	94
4.3.1 Line broadening in low-pressure gases: homogeneous and inhomogeneous line shapes	95
4.3.2 Optical pumping and oriented molecules	97
4.3.3 Saturation effects	99
4.3.4 Saturation effects and sub-Doppler linewidths	101
4.3.5 Lamb dips	101
4.3.6 Velocity-tuned three- and four-level resonances	103
4.3.7 Optical-optical double resonance and level crossing	104
4.3.8 Anti-crossing	104
4.3.9 Doppler-free two-photon signals	105
4.3.10 Optical-microwave double resonance	105
References	106
5 The experimental measurement of infrared spectra	109
5.1 Introduction	109
5.2 Fourier transform spectrometers	109
5.3 Multiplex diffraction grating and echelle spectrometers	124
5.4 Tunable and fixed-frequency infrared lasers	132
5.4.1 Semiconductor diode lasers and diode laser spectrometers	132
5.4.2 Spectrometers based on colour centre lasers	141
5.4.3 Difference-frequency spectrometers	141
5.4.4 Infrared molecular gas lasers: CO ₂ and CO	145
5.5 Long-pathlength absorption cells	151
5.5.1 Non-resonant multipass cells	152
5.5.2 Resonant multipass cells	154
5.6 Supersonic jet sources	163

5.7 Collisional cooling cells	165
References	167
6 Analysis of the vibration-rotation bands of linear molecules	171
6.1 Introduction	171
6.2 Parallel bands of linear molecules	172
6.3 Perpendicular bands of linear molecules	177
6.4 Hot bands	182
6.5 Combination and overtone bands	185
6.6 Absorption bands of quasi-linear molecules	189
6.7 Linear molecules as wavelength and frequency standards	195
References	199
7 Analysis of symmetric and spherical rotor spectra	201
7.1 Introduction	201
7.2 Parallel and perpendicular bands of symmetric rotors	201
7.2.1 Parallel-type bands	202
7.2.2 Perpendicular-type bands	204
7.2.3 Band systems with localized resonances	209
7.3 Infrared bands of spherical tops	215
7.4 Molecules with inversion splitting	221
7.5 Symmetric rotor molecules with internal rotation	225
7.5.1 C_2H_6 , CH_3SiH_3 and Si_2H_6	226
7.5.2 C_2H_6 , CH_3CF_3 and C_2F_6	231
References	235
8 Asymmetric rotor bands	237
8.1 Introduction	237
8.2 Structure of 'isolated fundamental bands'	238
8.2.1 Type A bands of near-prolate asymmetric tops	238
8.2.2 Type C bands of near-oblate asymmetric tops	240
8.2.3 Type B and C bands of near-prolate asymmetric tops	241
8.2.4 Type A and B bands of near-oblate asymmetric tops	242
8.3 Analysis of the spectra of heavy asymmetric rotor molecules	244
8.4 Structure of perturbed bands	246
8.4.1 Coriolis perturbations	247
8.4.2 Torsional splitting of vibration-rotation lines	251
References	260
9 Electric and magnetic resonance spectroscopy	261
9.1 Resonance methods	261
9.1.1 Laser Stark (electric resonance) spectrometers	261
9.1.2 Laser magnetic resonance spectrometers	268
9.2 Laser Stark spectroscopy of small molecules	269
9.2.1 The calculation of the high-field Stark effect	275
9.2.2 Vibrational, rotational and torsional dependence of dipole moments	277
9.2.3 Other resonance methods using electric field tuning	284

9.2.4	Apparatus and modulation dependence of sub-Doppler lineshapes	289
9.2.5	Stark spectroscopy and the measurement of the dipole moment in small stable molecules	296
9.2.6	High electric field orientation of linear molecules: pendular states	309
9.2.7	Transition dipole moment measurements using Rabi oscillations	309
9.2.8	Stark spectroscopy of semi-stable molecules	312
9.3	Laser magnetic resonance spectroscopy	317
9.3.1	Theory of the Zeeman interaction	317
9.3.2	The effective Zeeman Hamiltonian	319
9.3.3	Estimation of Zeeman parameters	321
9.3.4	The LMR spectra of some representative free radicals	324
	References	329
10	Laser spectroscopy of free radicals, ions and weakly bound molecules	333
10.1	Generation of short-lived molecules	333
10.1.1	Measurement of absorption spectra in cells	333
10.1.2	Measurements in supersonic expansions	337
10.2	Spectrometers for detecting transient or weakly bound molecules	339
10.2.1	Absorption-spectroscopic measurements of free radicals generated in cells	339
10.2.2	Absorption spectroscopy of molecular ions generated in cells	341
10.2.3	Ion beam experiments	343
10.2.4	Supersonic nozzle discharge experiments	345
10.3	Examples of the studies of key free radicals and ions	345
10.3.1	Free radicals	345
10.3.2	The infrared spectra of molecular ions	350
10.3.3	The spectra of selected molecular ions	353
10.3.4	Negative ion spectroscopy	356
10.4	Examples of the spectra of weakly bound molecular clusters	359
	References	367
11	Spectroscopy of the Earth's atmosphere: interplay between high-resolution laboratory spectroscopy and remote sensing	371
11.1	Introduction	371
11.2	Laboratory measurements of absorption cross-sections and related databases	373
11.3	Summary of properties of the Earth's atmosphere	374
11.4	Development of stratospheric spectroscopy	378
11.5	Introduction to radiative transfer	392
11.6	Remote sensing	398
11.7	Tropospheric spectroscopy	402
	References	402
12	Astrophysical spectra	405
12.1	Introduction	405
12.2	Spectroscopy of planetary atmospheres	407
12.2.1	The inner planets	408
12.2.2	The gas giants	409

12.3 Spectroscopy of stars	419
12.4 Probing galaxies and the interstellar medium	423
12.4.1 Molecular hydrogen	423
12.4.2 Protonated hydrogen	424
12.5 Conclusion	426
References	427
 Appendix: A summary of physical quantities, symbols and units used in infrared spectroscopy	429
A.1 Angular momentum operators and quantum numbers	429
A.2 Vibration-rotation constants	431
A.3 Electromagnetic radiation and interaction with external fields	433
References	434
