

The background of the cover features a complex 3D molecular model. It consists of several interconnected clusters of atoms, represented by spheres of different colors: grey for carbon, white for hydrogen, red for oxygen, blue for nitrogen, and orange for phosphorus. The atoms are connected by lines representing chemical bonds. The overall structure is intricate, with multiple rings and branching points, set against a green background with faint chemical structures and formulas.

Preface	xxiii

1 Naturally Occurring Aminophosphonic and Aminophosphinic Acids	1
<i>Przemyslaw Mastalerz and Pawel Kafarski</i>	
2-Aminoethanephosphonic acid (AEP, ciliatane)	2
Phosphonates metabolically related to 2-aminoethanephosphonic acid	8
Aminophosphonate antibiotics and related compounds	9
Antibiotic phosphonopeptides	10
Biosynthesis of the P-C bond	15
Biosynthesis of 2-aminoethanephosphonic acid and its N-methylated derivatives	17
Biosynthesis of bialaphos	18
Biodegradation of organophosphonates	18
The origin of aminophosphonates in nature	22
References	23
2 Synthesis of α-Aminoalkanephosphonic and α-Aminoalkanephosphinic Acids	33
<i>Pawel Kafarski and Jerzy Zon</i>	
Aldehydes and ketones as substrates for the preparation of aminophosphonates	34
<i>Amidolkylation of trivalent phosphorus compounds</i>	34
<i>Mannich-type condensation of amines with aldehydes and phosphorous or hypophosphorous acid</i>	37
<i>Kabachnik-Fields reaction</i>	38
<i>Hydrophosphonylation of imines</i>	41
<i>Hydrophosphonylation of other C=N bonds</i>	44
<i>Hydrophosphonylation of triazines</i>	46

<i>Hydrophosphonylation of aldehydes – hydroxyalkanephosphonates as substrates for the preparation of 1-aminoalkanephosphonates</i>	47
Carboxylic acids as substrates for the synthesis of 1-aminoalkanephosphonic acids	50
<i>1-Oxoalkanephosphonates as substrates</i>	50
<i>Phosphonoacetates as substrates</i>	53
<i>Replacement of amino acid carboxylic moieties by phosphonic groups</i>	54
Nitriles as substrates	55
Phosphonylation of halogenoalkylamines and related compounds	56
Amination of alkanephosphonates and functionalized alkanephosphonates	59
<i>Nucleophilic amination</i>	59
<i>Electrophilic amination</i>	60
Alkylation of derivatives of dialkyl aminomethanephosphonates	61
<i>Alkylation of Schiff bases</i>	61
<i>Alkylation of other derivatives of aminomethanephosphonic acid</i>	62
Hydrogenation of N-acyl- α , β -dehydroaminophosphonates	64
Other methods	64
Hydrolytic cleavage of carbon-phosphorus bond	67
References	67
3 Synthesis of Aminoalkanephosphonic and Aminoalkanephosphinic Acids with the Amino Substituent in other than the α-Position	75
<i>Valery P. Kukhar</i>	
Synthesis of ω -aminophosphonates by addition of amines to unsaturated phosphonates	76
Introduction of the amino function by ketophosphonate transformation	78
Formation of the amino function in phosphonates by reduction of nitrogen-containing groups	82
Syntheses of aminophosphonates by the Arbuzov and Michaelis-Becker reactions	83
Synthesis of aminoalkanephosphonic acids by Curtius and Hofmann rearrangements	85
Syntheses of aminophosphonates by the carbanion approach	86
Miscellaneous reactions leading to aminophosphonates	88
Arenephosphonic acids containing an amino function in the ring	92
Nitrogen heterocycles with a phosphonic (or phosphinic) acid residue	94
References	99

4	α-Amino Acid Analogues Bearing Side-Chain C-P Linkages	103
	<i>Sharon Lall and Robert Engel</i>	
	Introduction	103
	Syntheses and biological significance	104
	A. Analogues of biological α -amino acids	104
	1. Structures of interest	104
	2. Syntheses of analogues of phosphinothricin	106
	3. Other potentially useful analogues of phosphinothricin	109
	4. Analogues of glutamic and aspartic acid – structure	110
	5. Analogues of glutamic and aspartic acid – syntheses and biology	110
	B. Analogues of amino acid phosphate esters	115
	1. Biology and structure	115
	2. Analogues of amino acid phosphate esters – synthesis	116
	C. Other α -amino acids containing a C-P bond in the side-chain	119
	D. Analogues of phosphatidylserine	120
	Consideration for future studies	121
	References	122
5	Asymmetric Synthesis of Aminophosphonic and Aminophosphinic Acids	127
	<i>Valery P. Kukhar</i>	
	1. Enantioselective C-C Bond forming reactions	128
	1.1. Chiral 'glycine' synthons – chirality in the nitrogen residue	128
	1.2. Chiral 'glycine' synthons – chirality in the phosphorus residue	137
	1.3. Catalyzed C-C bond formation reaction leading to chiral aminophosphonates	139
	1.4. Miscellaneous C-C bond formation reactions leading to chiral aminophosphonates	140
	2. Enantioselective C-P bond forming reactions	143
	2.1. Addition of hydrophosphonyl compounds to imines	143
	2.2. Three-component Kabachnik-Fields reaction	148
	2.3. Catalytic addition of hydrophosphonyl compounds to C=N bonds	151
	2.4. Miscellaneous reactions for stereoselective C-P bond formation	152
	3. Stereoselective C-N bond formation	154
	4. Stereoselective C-H bond forming reactions	164
	5. Conclusions	167
	References	168

6	Synthesis of Phosphono- and Phosphinopeptides	173
	<i>Paweł Kafarski and Barbara Lejczak</i>	
	Protection of the amino group	174
	Protection of the phosphonic moiety	176
	Synthesis of phosphono- and phosphinopeptides containing P-terminal aminophosphonate	178
	Preparation of diastereomeric phosphonodipeptides containing P-terminal aminophosphonate	183
	Phosphonodepsipeptides containing P-terminal hydroxyphosphonate	183
	Peptides containing a phosphonic or phosphinic moiety in the side-chain	184
	Peptides containing a phosphoramidate or phosphinamidate bond	187
	Phosphonodepsipeptides containing a phosphonoester moiety	191
	Phosphonopeptide nucleic acids	193
	Phosphinopeptides in which a phosphinic acid replaces a dipeptidyl fragment of the peptide chain	194
	Peptides in which a PH_2 group replaces the NH_2 moiety	196
	References	196
7	Column Chromatography of Aminophosphonic Acids and Phosphonopeptides	205
	<i>S. V. Galushko</i>	
	1. Introduction	205
	2. Separation of phosphonopeptides using column liquid chromatography	206
	3. Chiral recognition of aminophosphonic acids	207
	4. Derivatization of aminophosphonic acids for HPLC analysis	213
	5. Derivatization of aminophosphonic acids for gas chromatographic analysis	214
	6. Optimization and problem solving	215
	References	215
8	Physical Properties and NMR-Spectroscopic Characterization of Aminophosphonates and Aminophosphinates	217
	<i>Gerhard Hägele</i>	
	1. Introduction	217
	2. The ^1H -NMR spectrum of α -N-phenylamino- α - phenylmethanephosphonic acid diethyl ester	219
	2.1. The aromatic region	219
	2.2. The -CHP-NH-skeleton	222
	2.3. The alkoxy region	223
	2.4. Aromatic ring current effects and molecular structure	226

3.	^1H -, ^{19}F - and ^{31}P -NMR spectra of aromatic substituents Ar^1 and Ar^2 and related fragments in α -N-arylamino- α -arylmethanephosphonic acid diethyl esters	233
4.	Increasing complexity by sterically demanding aromatic substituents in Ar^1 or Ar^2	234
4.1.	The 1-naphthyl group attached to the CHP unit	234
4.2.	The 2-naphthyl group attached to the CHP unit	237
4.3.	The 9-anthryl group attached to the CHP unit	239
4.4.	The 1-naphthyl group attached to the NH unit	240
5.	Sterically overcrowded aminophosphonates	242
6.	Variations of ^1H -NMR spectra from -CHP-NH-fragments with substituent pattern, temperature, solvent and protonation	246
6.1.	α -N-(4-fluorophenyl)amino- α -phenylmethanephosphonic acid diethyl ester	246
6.2.	Classification of -CHP-NH-spectra	251
6.3.	Attempts to interpret the results	251
6.4.	Conformational analysis of α -N-(4-trifluoromethylphenyl)amino- α -phenylmethanephosphonic acid diethyl ester	253
6.5.	Bulky aromatic substituents in Ar^1 and Ar^2	259
7.	Heterocyclic aminophosphonates	260
8.	Aromatic ring current effects in an isomeric pair of naphthyl-substituted aminophosphonates	262
9.	Bifunctional aminophosphonates	265
9.1.	Structural considerations	265
9.2.	The CHP-skeleton of bifunctional aminophosphonates	265
9.3.	The $\text{P}(\text{O})(\text{OCH}_3)_2$ groups from bifunctional aminophosphonates	267
10.	Aminophosphinates	269
10.1.	Solid state and molecular modelling of P-[α -N-(4-fluorophenyl)-amino- α -phenylmethyl]-P-(methyl)phosphinic acid n-butyl ester (2.1-D1)	271
10.2.	The ^1H -NMR spectrum of P-[α -N-(4-fluorophenyl)amino- α -phenyl-methyl]-P-(methyl)phosphinic acid n-butyl ester (2.1-D1)	274
11.	Some comments on phosphonic and phosphinic acids	276
	References	280
