

BRIDGE LOADS

COLIN O'CONNOR AND PETER A. SHAW

Suranaree University of Technology

31051000647467

Contents

0. 2042

<i>Acknowledgements</i>	viii
Chapter 1 Introduction	1
Chapter 2 Failure	14
2.1 The nature of failure	14
2.2 The collapse of a building frame	16
2.3 Failure under moving loads	27
2.4 Case studies	36
2.5 Brittle fracture	51
2.6 Fatigue	56
Chapter 3 Design philosophies	59
3.1 Design at working loads	59
3.2 Design for collapse	60
3.3 Limit states design	61
Chapter 4 Codes of practice	72
4.1 Introduction	72
4.2 British codes for highway bridges	72
4.3 Standard specifications for American highway bridges	78
4.4 Ontario and Canadian highway bridge design codes	83

4.5	Some European codes for highway bridges	90
4.6	Eurocode for highway bridges	94
4.7	Australian codes for highway bridges	96
4.8	British Standards for railway bridges	100
4.9	American Railway Engineering Association	104
4.10	Eurocode for railway bridges	106
4.11	Australian code for railway bridges	107
4.12	South African Bridge Code	109
4.13	Review	109

Chapter 5 Selection of primary loads and load factors 114

5.1	Probability models	114
5.2	Probability of failure for non-normal distributions	122
5.3	Code calibration	124
5.4	Selection of the primary live loads	130
5.5	Legal limits and costs	146
5.6	Bridge life and acceptable risk	155
5.7	Reserves of strength	158
5.8	Bridge evaluation and proof testing	159
5.9	Serviceability loads	161

Chapter 6 Multiple presence, progressive failure and fatigue 164

6.1	Multiple presence	164
6.2	Progressive failure	174
6.3	Fatigue loading	176

Chapter 7 Dynamic vehicle loads 182

7.1	Introduction	182
7.2	Measured impact values	183
7.3	Road and rail roughness	194
7.4	Analyses for bridge-vehicle interaction	198
7.5	Code provisions for horizontal dynamic loads	216

Chapter 8 Light rail 225

Chapter 9 Pedestrian and cycle loads 234

9.1	Nature of pedestrian loading	234
-----	------------------------------	-----

9.2	Periodic and impulsive loads	239
9.3	Perception of vibration	241

Chapter 10	Barrier and railing loads	244
-------------------	----------------------------------	-----

10.1	Vehicle barriers	244
10.2	Pedestrian and bicycle barriers	254
10.3	Light rail barriers	255
10.4	Railway barriers	256

Chapter 11	Stream loads	259
-------------------	---------------------	-----

11.1	Introduction	259
11.2	Stream flows	262
11.3	Scour	272
11.4	Flow loads on piers and bridges	279
11.5	Debris and ship-impact loads	283
11.6	Effects of ice	286

Chapter 12	Wind, earthquake and temperature effects	289
-------------------	---	-----

12.1	Wind velocities	289
12.2	Wind forces	298
12.3	Buffeting	304
12.4	Aerodynamic instability	307
12.5	Earthquake loads	316
12.6	Temperature effects	323

<i>Bibliography</i>	327
---------------------	-----

<i>Index</i>	343
