Global Structural Analysis of Buildings

Contents

Preface				
No	otatio	ns	xiii	
1	Intr	roduction	1	
	1.1	Background	1	
	1.2	General assumptions	3	
	1.3	The structure of the book	4	
2	Spa	tial behaviour	7	
	2.1	Basic principles	7	
	2.2	The equivalent column and its characteristics	8	
	2.3	The spatial behaviour of the equivalent column	16	
3	Stal	bility and frequency analyses	18	
	3.1	Stability analysis	19	
		3.1.1 Doubly symmetrical systems – basic critical loads	20	
		3.1.2 Coupling of the basic modes; combined sway-		
		torsional buckling	26	
		3.1.3 Concentrated top load; single-storey buildings	32	
		3.1.4 Shear mode situations	33	
		3.1.5 Soil-structure interaction	36	
		3.1.6 Individual beam-columns	41	
	3.2	Frequency analysis	43	
		3.2.1 Doubly symmetrical systems – basic natural frequen-		
		cies	44	
		3.2.2 Coupling of the basic modes; combined lateral-		
		torsional vibrations	52	
		3.2.3 Concentrated mass at top level; single-storey buildings	55	
		3.2.4 Soil-structure interaction	57	
		3.2.5 Supplementary remarks	60	

4	Str	ess analysis: an elementary approach	63
	4.1	Horizontal load	64
		4.1.1 Wind	64
		4.1.2 Seismic load	65
		4.1.3 Construction misalignment	67
		4.1.4 Comparisons	68
	4.2	Buildings braced by parallel walls	69
		4.2.1 Basic principles	70
		4.2.2 Load distribution	72
		4.2.3 Deformations	75
	4.3	Buildings braced by perpendicular walls	76
		4.3.1 Load distribution	77
		4.3.2 Deformations	81
	4.4	Buildings braced by frameworks	82
		4.4.1 Frameworks in a symmetrical arrangement	82
		4.4.2 Frameworks in an asymmetrical arrangement	83
		Maximum bending moments in the bracing elements	86
	4.6	Worked examples	90
		4.6.1 Example 1: building braced by parallel walls	90
		4.6.2 Example 2: building braced by perpendicular walls	91
		4.6.3 Comparison	94
		4.6.4 Example 3: building braced by frameworks and a	
		single wall	94
	4.7	Discussion	96
5	Stre	ess analysis: an advanced approach	98
	5.1	.	99
	5.2	· · · · · · · · · · · · · · · · · · ·	103
		5.2.1 Horizontal displacements	103
		5.2.2 Rotations	105
	5.3		108
	5.4		110
		5.4.1 Shear forces and bending moments	110
		5.4.2 Torsional moments	121
	5.5		126
		Concentrated force at top level; single-storey buildings	129
	5.7	y, .,	
		horizontal load	137
	5,8	*Worked example: a 6-storey building in London	139
		§8.1 Model: individual shear walls	140
		5.8.2 Model: built-up shear walls and cores	144

 5.9 Supplementary remarks 5.9.1 Frameworks and coupled shear walls 5.9.2 Bracing systems with shear or a mixture of shear and bending deformations 5.9.3 Special cases – scope for simplification 5.9.4 Second-order effects 5.9.5 Soil-structure interaction 6 Illustrative example; Qualitative and quantitative evaluation 6.1 Case 1 6.1.1 Critical load 6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings 	
 5.9.1 Frameworks and coupled shear walls 5.9.2 Bracing systems with shear or a mixture of shear and bending deformations 5.9.3 Special cases – scope for simplification 5.9.4 Second-order effects 5.9.5 Soil-structure interaction 6 Illustrative example; Qualitative and quantitative evaluation 6.1 Case 1 6.1.1 Critical load 6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings 	149
5.9.2 Bracing systems with shear or a mixture of shear and bending deformations 5.9.3 Special cases – scope for simplification 5.9.4 Second-order effects 5.9.5 Soil-structure interaction 6 Illustrative example; Qualitative and quantitative evaluation 6.1 Case 1 6.1.1 Critical load 6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings	149
bending deformations 5.9.3 Special cases – scope for simplification 5.9.4 Second-order effects 5.9.5 Soil-structure interaction 6 Illustrative example; Qualitative and quantitative evaluation 6.1 Case 1 6.1.1 Critical load 6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings	
5.9.3 Special cases – scope for simplification 5.9.4 Second-order effects 5.9.5 Soil-structure interaction 6 Illustrative example; Qualitative and quantitative evaluation 6.1 Case 1 6.1.1 Critical load 6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings	150
5.9.4 Second-order effects 5.9.5 Soil-structure interaction 6 Illustrative example; Qualitative and quantitative evaluation 6.1 Case 1 6.1.1 Critical load 6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings	150
 5.9.5 Soil-structure interaction 6 Illustrative example; Qualitative and quantitative evaluation 6.1 Case 1 6.1.1 Critical load 6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio - Global safety factor 7.2 Global critical load ratio - Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	151
 6.1 Case 1 6.1.1 Critical load 6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings 	152
 6.1 Case 1 6.1.1 Critical load 6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings 	154
6.1.1 Critical load 6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings	154
6.1.2 Fundamental frequency 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio — Global safety factor 7.2 Global critical load ratio — Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings	
 6.1.3 Maximum stresses and deformations 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio — Global safety factor 7.2 Global critical load ratio — Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	157
 6.2 Case 2 6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	159
6.2.1 Critical load 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio — Global safety factor 7.2 Global critical load ratio — Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build-	160
 6.2.2 Fundamental frequency 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7.1 Global critical load ratio 7.2 Global critical load ratio - Global safety factor 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	163
 6.2.3 Maximum stresses and deformations 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	165
 6.3 Case 3 6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio – Global safety factor 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	166
6.3.1 Critical load 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio - Global safety factor 7.2 Global critical load ratio - Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey buildings	167
 6.3.2 Fundamental frequency 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio - Global safety factor 7.2 Global critical load ratio - Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	169
 6.3.3 Maximum stresses and deformations 6.4 Evaluation 7 Global critical load ratio 7.1 Global critical load ratio - Global safety factor 7.2 Global critical load ratio - Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	171
 7 Global critical load ratio 7.1 Global critical load ratio - Global safety factor 7.2 Global critical load ratio - Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	171
 7 Global critical load ratio 7.1 Global critical load ratio - Global safety factor 7.2 Global critical load ratio - Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	172
 7.1 Global critical load ratio - Global safety factor 7.2 Global critical load ratio - Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	174
 7.1 Global critical load ratio - Global safety factor 7.2 Global critical load ratio - Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	176
 7.2 Global critical load ratio – Performance indicator 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	177
 7.3 Further applications 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	178
 8 Use of frequency measurements for the global analysis 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	181
 8.1 Stiffnesses 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	
 8.2 Critical loads 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	182
 8.2.1 Multistorey buildings under uniformly distributed floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	183
floor load 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build-	184
 8.2.2 Concentrated top load; single-storey buildings 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	
 8.3 Deformations 8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build- 	184
8.3.1 Multistorey buildings subjected to horizontal load of trapezoidal distribution8.3.2 Concentrated force at top level; single-storey build-	186
trapezoidal distribution 8.3.2 Concentrated force at top level; single-storey build-	186
8.3.2 Concentrated force at top level; single-storey build-
