

# COOL THERMODYNAMICS

The Engineering and Physics of  
Predictive, Diagnostic and Optimization Methods for  
Cooling Systems

Jeffrey M Gordon and Kim Choon Ng

CAMBRIDGE INTERNATIONAL SCIENCE PUBLISHING

# Contents

PREFACE .....	xi
NOMENCLATURE .....	xiii
CONVERSION TABLE .....	xvi
<b>Chapter 1: WHAT THE BOOK HAS TO OFFER AND THE INTENDED AUDIENCES: MODELING, DIAGNOSING AND OPTIMIZING COOLING DEVICES .....</b>	<b>1</b>
A. Your interest in cooling systems .....	1
B. Cooling basics .....	2
C. Universal aspects of chiller behavior .....	6
D. Objectives of the book and the intended audiences .....	8
D1. The issues addressed and the predictions validated .....	8
D2. The readership: toward whom the book is geared .....	9
E. The reader's background .....	14
<b>Chapter 2: THERMODYNAMIC AND OPERATIONAL FUNDAMENTALS.....</b>	<b>15</b>
A. Introduction .....	15
B. Mechanical chillers .....	16
B1. Reversible Carnot refrigeration cycle .....	16
B2. The discrepancy between physical idealizations and engineering realities .....	19
B3. Real vapor-compression cycles .....	26
B4. Reciprocating chillers .....	31
B5. Centrifugal chillers .....	32
B6. Screw compressor chillers .....	33
B7. Refrigerants .....	36
C. Absorption chillers .....	37
C1. Absorption basics and absorption versus mechanical chillers .....	37
C2. Working pairs (refrigerant solutions) and practical considerations .....	40
C3. COP for absorption machines .....	42
C4. Heat regeneration and multi-stage configurations .....	44
C5. Series versus parallel configurations .....	44
C6. Derivation of fundamental bounds for absorption COP .....	45
D. Thermoacoustic chiller .....	50
E. Thermoelectric chiller .....	51
<b>Chapter 3: STANDARDS, MEASUREMENTS AND EXPERIMENTAL TEST FACILITIES FOR CHILLERS AND HEAT PUMPS .....</b>	<b>54</b>
A. Introduction .....	54
B. The basics of standards .....	54
B1. Wherfore standards? .....	54

B2. Types of standards .....	55
B3. What constitutes commercial standards? .....	55
C. Designing an experimental test facility .....	58
D. Measurement accuracy, instrumentation and experimental uncertainty .....	59
E. Standard for water-cooled mechanical chillers .....	65
F. Absorption chiller standard .....	66
G. Heat pump standards .....	68
G1. Mechanical heat pumps .....	68
G2. Absorption heat pumps .....	69
H. An alternative test procedure and mixing strategy .....	69
H1. Why bother with alternative test rig designs? .....	69
H2. The basic idea for simplifying the procedure .....	70
H3. The mixing process for a chiller .....	70
H4. Mixing process for a heat pump .....	71

## **Chapter 4: ENTROPY PRODUCTION, PROCESS AVERAGE TEMPERATURE AND CHILLER PERFORMANCE: TRANSLATING IRREVERSIBILITIES INTO MEASURABLE VALUES .....**

A. Entropy production .....	73
B. Example for mechanical chillers .....	75
C. Example for absorption chillers .....	76
D. Process average temperature .....	77
E. Derivation of the governing performance equation for mechanical chillers .....	84
E1. The first two laws of thermodynamics and general modeling of irreversibilities .....	84
E2. How COP is comprised of contributions from individual classes of irreversibility .....	87
E3. A natural form for chiller characteristic plots .....	90
F. Derivation of the performance equation for absorption systems .....	91
F1. The different modes of absorption machines .....	91
F2. Derivation of the characteristic curve for chillers and heat pumps .....	91
F3. Process average temperatures and general expressions for COP .....	93
F4. Heat transformers .....	95
G. Validity of the constancy of internal losses .....	96
H. Process average temperature and exergy analysis .....	97

## **Chapter 5: THE FUNDAMENTAL CHILLER MODEL IN TERMS OF READILY-MEASURABLE VARIABLES .....**

A. The value of expressing chiller performance in terms of coolant temperatures .....	98
B. Derivation for mechanical chillers .....	99
B1. The full expression .....	99
B2. The approximate formula .....	103
B3. Qualifications about the regression fits .....	104
C. Heat exchanger balances for absorption machines .....	105

C1. Absorption chillers and heat pumps .....	105
C2. Absorption heat transformers .....	106
C3. Absorption chiller performance curve .....	107
<b>Chapter 6: EXPERIMENTAL VALIDATION OF THE FUNDAMENTAL MODEL AND OPTIMIZATION CASE STUDIES FOR RECIPROCATING CHILLERS .....</b>	<b>109</b>
A. Aims of the chapter .....	109
B. Test of the fundamental model as a predictive tool .....	110
B1. Chiller and experimental details .....	110
B2. Theory versus experiment .....	110
B3. A qualification: the importance of measurement accuracy .....	115
C. Where actual chiller performance lies on the characteristic curve .....	117
D. Constrained chiller optimization for limited heat exchanger size .....	118
E. Highly constrained optimal designs: air-cooled split reciprocating chillers ...	120
<b>Chapter 7: FINITE-TIME THERMODYNAMIC OPTIMIZATION OF REAL CHILLERS .....</b>	<b>125</b>
A. Global optimization with respect to finite time and finite thermal inventory ..	125
B. How finite time enters the governing performance equations .....	127
C. Performing the global optimization .....	129
D. Comparison with chiller experimental data .....	131
E. Equivalence of maximizing COP and minimizing universal entropy production .....	134
F. Closure .....	135
<b>Chapter 8: COOLANT FLOW RATE AS A CONTROL VARIABLE .....</b>	<b>137</b>
A. Background to the problem .....	137
B. Adapting the analytic chiller model to incorporate coolant flow rates .....	140
C. Explicit accounting for the influence of coolant flow rate .....	141
D. Experimental details .....	143
E. Application of the model and experimental confirmation .....	145
F. Closure .....	147
<b>Chapter 9: OPTIMIZATION OF ABSORPTION SYSTEMS .....</b>	<b>149</b>
A. Objectives and motivation .....	149
B. Experimental data, computer simulation results and device optimization .....	150
B1. The devices studied .....	150
B2. Comparison of device performance and predicted optima .....	151
B3. Absorption chillers and heat pumps: diagnostics and design conclusions	151
B4. Heat transformer analysis and diagnostics .....	156
<b>Chapter 10: QUASI-EMPIRICAL THERMODYNAMIC MODEL FOR CHILLERS .....</b>	<b>159</b>
A. Introduction .....	159

B.	Derivation of the model for mechanical chillers .....	161
B1.	Energy and entropy balance.....	161
B2.	Heat exchanger effects: expressing results in terms of coolant temperatures .....	161
B3.	Modeling internal losses and the final 3-parameter formula .....	163
C.	Reciprocating chillers .....	165
C1.	Validating predicted functional dependences and accurate COP correlations .....	165
C2.	Limits to the model .....	168
D.	Centrifugal chillers .....	169
D1.	Details of a diagnostic case study .....	169
D2.	Performance data, model predictions and the truth about part-load behavior .....	172
D3.	The diagnostic case study from the perspective of the fundamental chiller model .....	175
E.	Absorption chillers .....	177
E1.	Basic thermodynamic behavior .....	177
E2.	Adapting the quasi-empirical model to absorption chillers .....	178
E3.	Comparing model predictions against experimental data .....	180
E4.	Case study on the effect of surfactant .....	181
E5.	The extended performance curve .....	185
F.	Less conventional chillers: thermoacoustic and thermoelectric refrigerators .....	186
F1.	Background .....	186
F2.	Thermoacoustic chillers .....	187
F3.	Thermoelectric chillers .....	187
F4.	Unique thermodynamic aspects of thermoelectric chillers .....	189
<b>Chapter 11: THE INADEQUACY OF ENDOREVERSIBLE MODELS .....</b>		<b>190</b>
A.	Missing most of the physics and its consequences .....	190
B.	Predicting COP as a function of cooling rate .....	192
C.	Analysis with data from reciprocating chillers .....	193
D.	Analysis with data from absorption systems .....	194
E.	Are endoreversible models for heat engines any better? .....	196
<b>Chapter 12: HEAT EXCHANGER INTERNAL DISSIPATION IN CHILLER ANALYSIS AND THE ESSENTIAL ROLE OF ACCURATE PROCESS AVERAGE TEMPERATURES .....</b>		<b>198</b>
A.	Peeking into the blackbox .....	198
B.	Studies for a reciprocating chiller .....	200
B1.	Background to the problem .....	200
B2.	Experimental details and thermodynamic calculations .....	200
B3.	Observations about internal dissipation .....	201
B4.	Repercussions for diagnostics and optimization .....	203
C.	Study for an absorption chiller .....	204
C1.	The nature of the study .....	204

C2. About regenerative absorption chillers .....	205
C3. Experimental details .....	207
C4. Calculation of the PATs and internal entropy production .....	210
C5. Computer simulation formulation and validation .....	212
C6. Quantitative results for internal dissipation and the implications .....	212
C7. Qualifications .....	217
<b>Chapter 13: TEMPERATURE-ENTROPY DIAGRAMS FOR REPRESENTING REAL IRREVERSIBLE CHILLERS .....</b>	<b>219</b>
A. Background .....	219
B. PAT and the performance characteristic for mechanical chillers .....	222
C. PAT-entropy diagram for mechanical chillers .....	223
D. PAT and thermodynamic diagrams for absorption chillers .....	225
E. The example of the thermoelectric chiller .....	230
<b>Chapter 14: CAVEATS AND CHALLENGES .....</b>	<b>232</b>
A. Tying up loose ends .....	232
B. The thermoelectric chiller as a clear cut case .....	233
C. Screw-compressor chillers .....	234
D. Regenerative absorption chillers .....	237
E. Adsorption chillers .....	237
F. Vortex-tube chillers .....	241
F1. Device description and how vortex motion creates a cooling effect .....	241
F2. Chiller performance characteristics .....	242
F3. Modeling the vortex-tube chiller .....	243
F4. The external perspective of the chiller .....	244
F5. The internal perspective of the chiller .....	244
F6. Characteristic chiller plots and their interpretation .....	246
