CONTENTS

1 THE PN JUNCTION DIODE	1
1.1 Semiconductor Basics	2
<i>The Bohr Model of the Atom</i>	2
<i>Intrinsic Silicon</i>	2
<i>Extrinsic Silicon</i>	3
1.2 Diode Fundamentals: The p-n Junction	5
<i>The Depletion Region</i>	5
<i>Bias Conditions</i>	5
<i>Diode Transconductance</i>	7
1.3 Diode Modeling and Approximations	9
<i>Graphical Analysis of Diode Circuits</i>	13
1.4 Dynamic Resistance	14
<i>Dynamic Resistance and Nonlinearity</i>	16
1.5 Diode Specifications	18
<i>Reverse-Bias Parameters</i>	18
<i>Forward Bias Parameters</i>	19
<i>A Simple Diode Test</i>	20
<i>Multiple-Diode Connections</i>	20
1.6 Zener Diodes	21
<i>Zener Characteristics</i>	21
<i>Reverse Breakdown Mechanisms</i>	24
1.7 Other Diodes	25
<i>Light-Emitting Diodes</i>	25
<i>Photodiodes</i>	28
<i>Schottky Diodes</i>	29
<i>Varactor Diodes</i>	30
1.8 Computer-Aided Analysis Applications	33
<i>Operating-Point Analysis</i>	33
<i>Plotting a Transconductance Curve</i>	34
<i>Small-Signal Considerations</i>	35
2 DIODE APPLICATIONS	43
2.1 The Half-Wave Rectifier	44
<i>Half-Wave Rectifier Load Voltage and Current</i>	44
<i>Half-Wave Rectifier Diode Current and Voltage</i>	46
<i>Half-Wave Rectifier Average Current and Voltage</i>	46
<i>Conduction Angle</i>	47
2.2 Full-Wave Rectifiers	48
<i>Bridge Rectifier</i>	48
<i>Center-Tap Full-Wave Rectifier</i>	51
2.3 An Alternative Perspective on Rectification	52
2.4 Filtering and Power Supplies	54
<i>Capacitor Filter</i>	54
<i>The Ripple Factor</i>	54
<i>Filter Effects on Diode Current and Voltage</i>	56
<i>Filter Capacitor Charging Current</i>	58
2.5 Alternative Filter Techniques	59
<i>RC Filters</i>	59
<i>LC Filters</i>	60
2.6 Bipolar Power Supplies	61
2.7 Voltage Multipliers	62
<i>Half-Wave Voltage Doubler</i>	62
<i>Full-Wave Voltage Doubler</i>	63
<i>Higher-Order Voltage Multipliers</i>	63
2.8 The Clamper	64
2.9 Clipper Circuits	66
<i>Simple Diode Clippers</i>	66
<i>Transfer Characteristic Curves</i>	66
<i>Additional Clipper Variations</i>	66
<i>Biased Clipper Circuits</i>	68
2.10 Zener Regulated Power Supplies	69
<i>Regulation Fundamentals</i>	69
<i>Basic Zener Regulator Operation</i>	71
<i>Zener Impedance Effects</i>	73
2.11 Computer-Aided Analysis Applications	76
<i>Filtered Full-Wave Rectifier</i>	76
<i>The Clamper</i>	77
<i>Asymmetrical Diode Clipper</i>	78
3 THE BIPOLAR TRANSISTOR	83
3.1 BJT Structure	84
<i>Schematic Symbols</i>	85
<i>Doping Concentrations</i>	85
3.2 Basic Transistor Action	85
<i>Base-Emitter Loop</i>	86
<i>Collector-Base Loop</i>	86
<i>Injection Current</i>	86
3.3 Transistor Current Relationships	86
<i>More on β_{dc}</i>	88
<i>Thermal Runaway</i>	88
<i>More on α_{dc}</i>	89
<i>Transconductance</i>	90
3.4 Regions of Operation	91
<i>Active Region</i>	91
<i>Cutoff Region</i>	92
<i>Saturation Region</i>	93
3.5 Basic Transistor Biasing Configurations	93
<i>Common-Base Biasing</i>	93
<i>Common-Emitter Biasing</i>	93

	<i>Common-Collector Biasing</i>	95		<i>Current Gain</i>	160
3.6	Transistor Leakage Currents	96		<i>Relationships between Power, Voltage and Current Gain</i>	160
	<i>Collector Leakage Current</i>	96			
3.7	Additional Transistor Parameters	97	5.2	Basic BJT Amplifier Configurations	161
	<i>Early Voltage</i>	98	5.3	Common-Emitter Configuration	161
	<i>Base-Spreading Effects</i>	100		<i>Common-Emitter Voltage Gain</i>	162
	<i>Breakdown Voltage</i>	101		<i>Common-Emitter Input Resistance</i>	163
3.8	Signal-Related Parameters	103		<i>Common-Emitter Phase Relationships</i>	163
	<i>AC Beta and Alpha</i>	103		<i>Common-Emitter Current and Power Gain</i>	164
	<i>Dynamic Emitter Resistance</i>	105		<i>Common-Emitter Amplifier Voltages</i>	164
3.9	Hybrid Parameters	107	5.4	Effects of Emitter-Feedback on the CE Amplifier	165
3.10	Transistor Packages and Classification Schemes	107		<i>Voltage Gain</i>	166
	<i>Package Types</i>	107		<i>Input Resistance</i>	167
	<i>General-Purpose Transistors</i>	108		<i>Power Gain and Current Gain</i>	167
3.11	Computer-Aided Analysis Applications	109		<i>Output Resistance</i>	167
	<i>Generating Collector Characteristic Curves: Nested Sweep</i>	110		<i>Common-Emitter Amplifier Variations</i>	167
	<i>About Transistor Models</i>	112		<i>Emitter Bypassing</i>	169
				<i>Collector Feedback</i>	172
4	BIPOLAR TRANSISTOR BIASING	117	5.5	Emitter-Follower	174
4.1	Base Biasing	118		<i>Voltage Gain</i>	174
	<i>DC Load-Line</i>	119		<i>Input Resistance</i>	175
	<i>Base-Biasing Disadvantages</i>	121		<i>Output Resistance</i>	175
	<i>Base-Biasing Variations</i>	122		<i>Uses of the Emitter Follower</i>	177
	<i>Saturated Switching Applications</i>	124		<i>Emitter-Follower Stability</i>	177
	<i>Forced Beta</i>	126	5.6	The Common-Base Amplifier	177
4.2	Emitter Feedback	127		<i>Voltage Gain</i>	177
	<i>Effects of Emitter Feedback on Q-Point Stability</i>	129		<i>Base Bypassing</i>	178
4.3	Collector Feedback	131		<i>Input and Output Resistance</i>	178
	<i>Collector Feedback versus Emitter Feedback</i>	133		<i>Current Gain</i>	179
	<i>Composite Emitter-Collector Feedback</i>	133	5.7	Darlington Pair	180
4.4	Voltage-Divider Biasing	134		<i>Darlington Pair DC Analysis</i>	180
	<i>Voltage-Divider Biasing Stability</i>	136		<i>Darlington Pair AC Analysis</i>	182
	<i>Some Voltage Divider Bias Design Guidelines</i>	137	5.8	Overview of Small-Signal Amplifiers	184
4.5	Emitter Bias	139		<i>Amplifier Configuration Summary</i>	184
	<i>Memorization and Formulas</i>	141		<i>Distortion</i>	184
4.6	Additional Biasing Variations	141	5.9	The AC Load-Line and Output Voltage Compliance	186
	<i>PNP Load-Line</i>	146		<i>Common-Emitter AC Load Line Construction</i>	186
4.7	Integrated-Circuit Biasing Techniques	147		<i>Output Voltage Compliance</i>	188
	<i>Monolithic ICs</i>	147	5.10	Computer-Aided Analysis Applications	191
	<i>Current Mirror</i>	147		<i>Voltage-Gain and Distortion</i>	191
	<i>Widlar Current Source</i>	150		<i>Emitter Feedback</i>	192
4.8	Computer-Aided Analysis Applications	152		<i>Frequency Response and Input Resistance</i>	194
	<i>Operating-Point Analysis</i>	152			
5	SMALL-SIGNAL BJT AMPLIFIERS	158	6	FIELD EFFECT TRANSISTORS	201
5.1	Fundamental Amplifier Characteristics	159	6.1	The Junction FET	202
	<i>Power Gain</i>	159		<i>Physical Structure of the JFET</i>	202
	<i>Voltage Gain</i>	159		<i>JFET Operation</i>	202
				<i>Additional JFET DC Characteristics</i>	206
			6.2	JFET Biasing Techniques	208
				<i>Fixed-Bias</i>	208
				<i>Self-Bias</i>	208

	Voltage-Divider Bias	212			Single-Ended-Input, Differential-Output Configuration	288
	Current-Source Biasing	215			Differential-Input, Differential-Output Configuration	290
	A Few JFET Applications	216			Differential-Input, Single-Ended-Output Configuration	293
6.2	The Depletion-Mode MOSFET	219		8.4	Differential Amplifier Variations	296
	DMOS Structure and Operation	220			Swamped Differential Amplifier	296
	Dual-Gate MOSFETs	225			Darlington- and FET-Based Differential Pairs	298
	MOSFET Handling Precautions	225			Active Loading	299
6.3	The Enhancement-Mode MOSFET	225		8.5	Differential-Pair Error Sources	300
	EMOS FET Structure and Operation	225			Common-Mode Response	300
	EMOS FET Biasing	227			Bias Current, Offset Current, and Offset Voltage	302
	Vertical MOSFET	228		8.6	Practical Differential Amplifier Implementation	304
6.4	Computer-Aided Analysis Applications	229		8.7	Computer-Aided Analysis Applications	305
	Basic Listings	229			Manual Analysis Results	305
	PSpice Applications	229			PSpice Q-Point Analysis Results	306
7	FET SMALL-SIGNAL AMPLIFIERS	238			Small-Signal Analysis	308
7.1	Basic Amplifier Configurations	239		9	INTRODUCTION TO MULTIPLE-STAGE AMPLIFIERS	319
7.2	Small-Signal Transconductance	239		9.1	Basic Gain Relationships	320
7.3	JFET Small-Signal Amplifiers	240		9.2	Capacitively Coupled Amplifiers	323
	Common-Source Amplifier	240		9.3	Direct Coupling	330
	Source-Follower	245		9.4	Multiple-Stage Differential Amplifiers	333
	Common-Gate Amplifier	246		9.5	Level-Translating Stages	337
7.4	DMOSFET Small-Signal Amplifiers	248		9.6	Decibels	340
7.5	EMOS FET Small-Signal Amplifiers	249			Decibel Power Gain	340
7.6	Active Loads	252			Decibel Voltage Gain	341
	Enhancement Loads	252		9.7	Computer-Aided Analysis Applications	343
	Depletion Load	252			Direct-Coupled CE Amplifier: Q-Point Analysis	344
7.7	Alternative FET Parameter Notation	253			Diff-Amp with Level Translator: DC Analysis	346
7.8	The BJT versus the FET	254			Diff-Amp with Level Translator: Signal Analysis	346
	Voltage-Gain Characteristics	254		10	POWER AMPLIFIER FUNDAMENTALS	357
	Saturation Characteristics	254		10.1	Amplifier Classifications	358
	Temperature Characteristics	254			Conduction Angle	358
	Distortion Characteristics	256		10.2	Class A Amplifiers	359
7.9	Computer-Aided Analysis Applications	256			Amplifier Power Dissipation	360
	JFET Amplifier	256			Load Power Dissipation	361
	Defining Your Own Device Model	258			Efficiency of the Capacitively-Coupled Class A Amplifier	363
	EMOS FET Amplifiers	260			Transformer Coupled Class A Amplifier	364
8	DIFFERENTIAL AMPLIFIERS	269		10.3	Class B and Class AB Amplifiers: Biasing Considerations	368
8.1	DC Analysis of the Differential Amplifier	270			Complementary-Symmetry Amplifiers	369
	Differential-Pair Current Relationships	270			Class AB Amplifiers	374
	Differential Amplifier Voltage Relationships	273				
8.2	Active Current Sources	275				
	Voltage-Divider-Biased Current Source	275				
	Current-Mirror	278				
	Widlar Current-Source	280				
	Supply-Voltage-Independent Current Source	281				
	Additional Active Current-Source Variations	285				
8.3	AC Analysis of the Differential Amplifier	285				
	Single-Ended-Input, Single-Ended-Output Configuration	285				

10.4	Class B and AB Amplifiers: Large-Signal Considerations	378
	<i>Average Emitter Resistance</i>	378
	<i>AC Analysis of the Basic Push-Pull Amplifier</i>	378
	<i>Emitter Swamping</i>	384
	<i>Class B and AB Efficiency</i>	386
