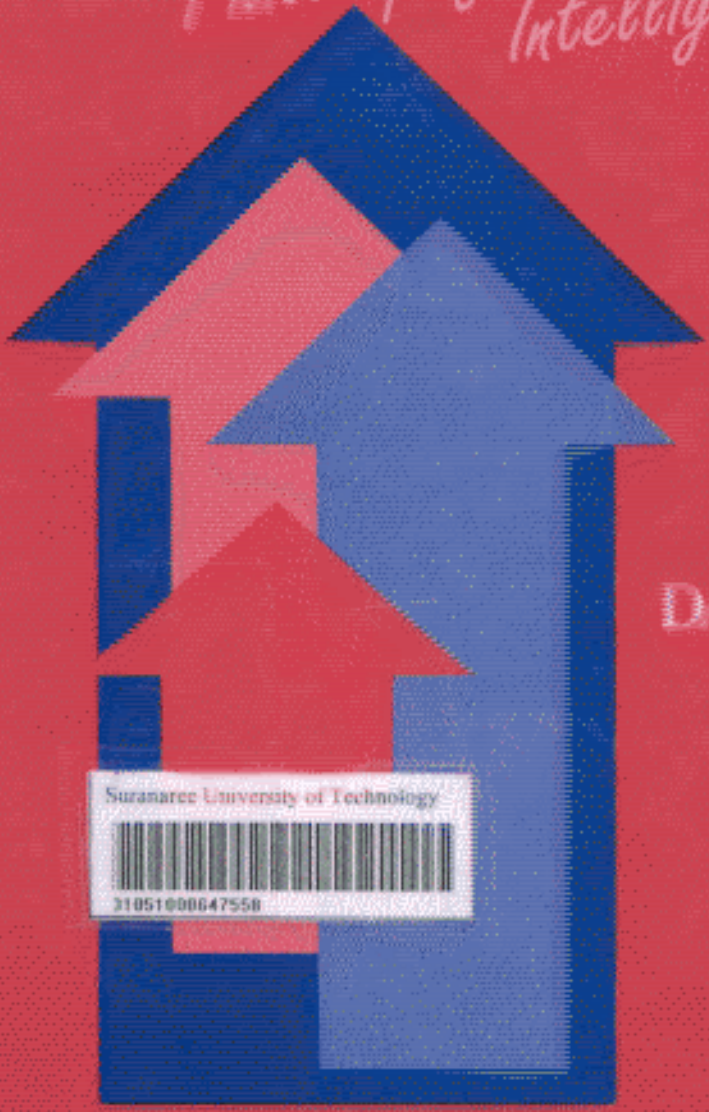
SECOND EDITION

EVOLUTIONARY COMPUTATION

Toward a New Philosophy of Machine Intelligence



DAVID B. FOGEL

CONTENTS

Preface to the Second Edition xi
Preface to the First Edition xv
Acknowledgments xix

Chapter 1 Defining Artificial Intelligence 1
1.1 Background 1
1.2 The Turing Test 2
1.3 Simulation of Human Expertise 4
1.3.1 Samuel's Checker Program 5
1.3.2 Chess Programs 7
1.3.3 Expert Systems 9
1.3.4 A Criticism of the Expert Systems or Knowledge-Based Approach 12
1.3.5 Fuzzy Systems 13
1.3.6 Perspective on Methods Employing Specific Heuristics 15
1.4 Neural Networks 16
1.5 Definition of Intelligence 19
1.6 Intelligence, the Scientific Method, and Evolution 21
1.7 Evolving Artificial Intelligence 25
References 25

Chapter 2 Natural Evolution 31
2.1 The Neo-Darwinian Paradigm 31
2.2 The Genotype and the Phenotype: The Optimization of Behavior 32
2.3 Implications of Wright's Adaptive Topography: Optimization Is Extensive yet Incomplete 36
2.4 The Evolution of Complexity: Minimizing Surprise 38
2.5 Sexual Reproduction 39
2.6 Sexual Selection 41
2.7 Assessing the Beneficiary of Evolutionary Optimization 43
2.8 Challenges to Neo-Darwinism 48
2.8.1 Neutral Mutations and the Neo-Darwinian Paradigm 48
2.8.2 Punctuated Equilibrium 48
2.9 Summary 50
References 51

Chapter 3 Computer Simulation of Natural Evolution 55
3.1 Early Speculations and Specific Attempts 55
3.1.1 Evolutionary Operation 55
3.1.2 A Learning Maching 56
3.2 Artificial Life 58
3.3 Evolutionary Programming 60
3.4 Evolution Strategies 69
3.5 Genetic Algorithms 73
3.6 The Evolution of Evolutionary Computation 82
References 86

Chapter 4 Theoretical and Empirical Properties of Evolutionary Computation 101
4.1 The Difficulties 101
4.2 Theoretical Analysis of Evolutionary Computation 102
4.2.1 The Framework for Analysis 102
4.2.2 Convergence in the Limit 103
4.2.3 The Error of Minimizing Expected Losses in Schema Processing 114
4.2.3.1 The Two-Armed Bandit Problem *115*
4.2.3.2 Extending the Analysis for "Optimally" Allocating Trials *117*
4.2.3.3 Limitations of the Analysis *117*
4.2.4 Misallocating Trials and the Schema Theorem in the Presence of Noise 119

4.2.5 Analyzing Selection 123
4.2.6 Convergence Rates for Evolutionary Algorithms 124
4.2.7 Does a Best Evolutionary Algorithm Exist? 134
4.3 Empirical Analysis 138
4.3.1 Variations of Crossover 138
4.3.2 Dynamic Parameter Encoding 143
4.3.3 Comparing Crossover to Mutation 147
4.3.4 Crossover as a Macromutation 155
4.3.5 Self-Adaptation in Evolutionary Algorithms 157
4.3.6 Fitness Distributions of Search Operators 159
4.4 Discussion 166
References 170

Chapter 5 Intelligent Behavior 179
5.1 Intelligence Requires Iterative Prediction and Control 179
5.2 General Problem Solving: Experiments with Tic-Tac-Toe 180
5.3 The Prisoner's Dilemma: Coevolutionary Adaptation 193
5.3.1 Background 194
5.3.2 Evolving Finite-State Representations 196
5.4 Learning How to Play Checkers without Relying on Expert Knowledge 213
5.5 Discussion 239
References 241

Chapter 6 Perspective 245
6.1 Evolution as a Unifying Principle of Intelligence 245
6.2 Prediction and the Languagelike Nature of Intelligence 246
6.3 The Misplaced Emphasis on Emulating Genetic Mechanisms 249
6.4 Bottom-Up versus Top-Down 250
6.5 Toward a New Philosophy of Machine Intelligence 253
References 254

Glossary 257
