

# MINIMALLY PROCESSED FRUITS *and* VEGETABLES

*Fundamental Aspects and Applications*

Stella M. Alzamora

María S. Tapia

Aurelio López-Malo

AN ASPEN PUBLICATION

---

# Contents

<b>Contributors</b> .....	<b>xi</b>
<b>Preface</b> .....	<b>xv</b>
<b>Overview</b> .....	<b>1</b>
<i>Stella M. Alzamora, Aurelio López-Malo, and María S. Tapia</i>	
<b>PART I—MICROBIOLOGICAL ASPECTS</b> .....	<b>11</b>
<b>Chapter 1—Hurdle Technology in the Design of Minimally Processed Foods</b> .....	<b>13</b>
<i>Lothar Leistner</i>	
Introduction .....	13
Hurdle Approach to Food Preservation .....	13
Basic Aspects .....	15
Examples for Minimally Processed Foods .....	18
Design of Minimally Processed Foods .....	23
Conclusions and Future Prospects .....	24
<b>Chapter 2—Induced Tolerance of Microorganisms to Stress Factors</b> .....	<b>29</b>
<i>Grahame W. Gould</i>	
Introduction .....	29
Major Stress Factors in Minimal Processing .....	30
Reactions to Stress .....	30
Virulence of Stressed Microorganisms .....	37
Conclusion .....	37
<b>Chapter 3—Microbial Ecology of Spoilage and Pathogenic Flora Associated to Fruits and Vegetables</b> .....	<b>43</b>
<i>Maurya Martínez, Rosa V. Díaz, and María S. Tapia</i>	
Introduction .....	43
Contamination and Spoilage .....	43

	Pathogenic Flora .....	44
	Conclusion .....	57
<b>Chapter 4—Use of Sanitizers in Raw Fruit and Vegetable Processing .....</b>		<b>63</b>
	<i>Larry R. Beuchat</i>	
	Introduction .....	63
	Chlorine .....	64
	Bromine .....	69
	Iodine .....	69
	Trisodium Phosphate .....	70
	Quaternary Ammonium Compounds .....	70
	Acids .....	71
	Hydrogen Peroxide .....	74
	Ozone .....	75
<b>Chapter 5—Tools for Safety Control: HACCP, Risk Assessment, Predictive Microbiology, and Challenge Tests .....</b>		<b>79</b>
	<i>Maria S. Tapia, Amaury Martinez, and Rosa V. Diaz</i>	
	Introduction .....	79
	HACCP and Risk Assessment .....	80
	Hazard Identification .....	88
	Predictive Microbiology .....	89
	Microbial Challenge Tests and Storage Tests .....	92
	Conclusion .....	95
<b>PART II—PHYSICOCHEMICAL AND STRUCTURAL ASPECTS .....</b>		<b>99</b>
<b>Chapter 6—Chemical and Physicochemical Interactions between Components and Their Influence on Food Stability .....</b>		<b>101</b>
	<i>Lia Noemi Gerschenson, Carmen A. Campos, Ana M. Rojas, and Guillermo Binstok</i>	
	Introduction .....	101
	Ethylenediaminetetraacetic Acid–Sorbate Interaction .....	101
	Ascorbic Acid–Humectant Interaction .....	104
	Sugars–Amino Acids–Sorbates Interaction .....	106
	Conclusion .....	108
<b>Chapter 7—Color of Minimally Processed Fruits and Vegetables as Affected by Some Chemical and Biochemical Changes .....</b>		<b>111</b>
	<i>Lidia Dorantes-Alvarez and Amparo Chiralt</i>	
	Introduction .....	111
	Carotenoids .....	112
	Anthocyanins .....	115
	Chlorophylls .....	116

Phenolic Compounds .....	118
Conclusion .....	124

**Chapter 8—Mathematical Modeling of Enzymatic Reactions as Related to Texture after Storage and Mild Preheat Treatments .....** **127**

*C. van Dijk and L.M.M. Tijskens*

Introduction .....	127
Texture and Texture-Generating Forces: A Verbal Model .....	128
Mathematical Modeling of Enzymes and Texture .....	131
Modeling Approach .....	132

**Chapter 9—The Role of Tissue Microstructure in the Textural Characteristics of Minimally Processed Fruits .....** **153**

*Stella M. Alzamora, María A. Castro, Susana L. Vidales, Andrea B. Nieto, and Daniela Salvatori*

Introduction .....	153
Key Structure Factors Determinant of Texture .....	154
Examination of Plant Tissue Structure .....	158
Diversity Within and Between Fruits .....	158
Textural Changes: A Microstructural View .....	160
Conclusion .....	169

**PART III—PRESERVATION TECHNOLOGIES .....** **173**

**Chapter 10—Improved Drying Techniques and Microwave Food Processing .....** **175**

*Constantino Suárez, Pascual E. Viollaz, Clara O. Rovedo, Marcela P. Tolaba, and Mónica Haros*

Introduction .....	175
Drying of Foodstuffs .....	175
Microwave Food Processing .....	181

**Chapter 11—Vacuum Impregnation of Plant Tissues .....** **189**

*Pedro Fito and Amparo Chiralt*

Introduction .....	189
Model of Vacuum Impregnation: Equilibrium and Kinetics .....	189
Vacuum Impregnation in Fruit Processing .....	192
Conclusion .....	201

**Chapter 12—High Hydrostatic Pressure and Minimal Processing .....** **205**

*Enrique Palou, Aurelio López-Malo, Gustavo V. Barbosa-Cánovas, and Jorge Welti-Chanes*

Introduction .....	205
High Hydrostatic Pressure Treatment .....	206
Microbial Response to High Hydrostatic Pressure Treatments .....	207

High Hydrostatic Pressure and Food-Quality-Related Enzymes .....	214
High Hydrostatic Pressure in Combination with Other Treatments .....	217
Conclusion .....	219
<b>Chapter 13—Processing Fruits and Vegetables by Pulsed Electric Field Technology .....</b>	<b>223</b>
<i>Gustavo V. Barbosa-Cánovas, M. Marcela Góngora-Nieto, and Barry G. Swanson</i>	
Introduction .....	223
PEF System .....	224
Inactivation Mechanisms .....	226
Microbial Inactivation by PEF .....	226
Enzyme Inactivation by PEF .....	229
Evaluation of PEF as a Pasteurization Technique .....	231
Processing of Apple Juice .....	231
Processing of Orange Juice .....	232
Conclusion .....	234
<b>Chapter 14—Natural Antimicrobials from Plants .....</b>	<b>237</b>
<i>Aurelio López-Malo, Stella M. Alzamora, and Sandra Guerrero</i>	
Introduction .....	237
Sources of Natural Antimicrobials from Plants .....	238
Methods for Testing the Efficacy of Antimicrobials .....	243
Phenolic Compounds .....	244
Other Antimicrobial Compounds from Plants .....	249
Interaction with pH and Other Preservation Factors .....	250
Application in Foods .....	252
Toxicologic Aspects .....	257
Conclusion .....	258
<b>Chapter 15—Use of Biopreservation in Minimal Processing of Vegetables .....</b>	<b>265</b>
<i>Marjon H.J. Bennik, E.J. Smid, and Leon Gorris</i>	
Introduction .....	265
Use of Lactic Acid Bacteria for Biopreservation .....	266
Bacteriocins Produced by Lactic Acid Bacteria .....	267
Strategies for the Application of Bacteriocins from Lactic Acid Bacteria for Biopreservation .....	269
Natural Occurrence of Bacteriocin-producing Lactic Acid Bacteria .....	270
Application of Bacteriocins or Bacteriocin-producing Lactic Acid Bacteria to Minimally Processed Vegetables .....	272
Legislation Aspects of Biopreservation .....	273
<b>Chapter 16—Minimal Processing of Fresh Produce .....</b>	<b>277</b>
<i>Raija Ahvenainen</i>	
Introduction .....	277
The Key Factors in the Minimal Processing of Fresh Produce .....	277

Raw Material ..... 278  
 Peeling, Cutting, and Shredding ..... 279  
 Cleaning, Washing, and Drying ..... 281  
 Browning Inhibition ..... 283  
 Packaging ..... 285  
 The Future of Minimally Processed Fresh Produce ..... 286

**PART IV—DEVELOPMENTS OF MINIMAL PROCESSING TECHNOLOGIES FOR FRUIT PRESERVATION IN THE FRAME OF TWO MULTINATIONAL PROJECTS ..... 291**

**Chapter 17—Minimally Processed Fruits Using Vacuum Impregnation, Natural Antimicrobial Addition, and/or High Pressure Techniques ..... 293**  
*Stella M. Alzamora, Pedro Fito, Aurelio López-Malo, María S. Tapia, and Efrén Parada Arias*  
 Introduction ..... 293  
 Technologies Using Vacuum Impregnation Techniques ..... 298  
 Technologies Using Natural Antimicrobials ..... 300  
 Technologies Using High Hydrostatic Pressures ..... 301  
 Conclusion ..... 303  
 Appendix 17–A: Preservation Techniques for Minimally Processed Fruits ..... 305

**PART V—LEGAL ASPECTS OF MINIMALLY PROCESSED FRUITS AND VEGETABLES ..... 317**

**Chapter 18—Regulatory and Safety Aspects of Refrigerated Minimally Processed Fruits and Vegetables: A Review ..... 319**  
*J. Andrés Vasconcellos*  
 Introduction ..... 319  
 Definition ..... 320  
 Minimally Processed Foods in the Market, the Need for Product and Consumer Information ..... 321  
 Regulatory Aspects ..... 322  
 Responsibilities ..... 334  
 Present Status on Regulatory Issues for Minimally Processed Foods ..... 336  
 Conclusion ..... 339

**List of Sources ..... 345**

**Index ..... 351**
