

# **SURFACE ACTIVE BEHAVIOUR OF PERFORMANCE SURFACTANTS**

Annual Surfactants Review

Volume 3

Edited by  
**D.R. Karsa**

# Contents

<b>1 Surfactant applications in the context of structure-performance relationships</b>	<b>1</b>
<b>GUIDO BOGNOLO</b>	
1.1 Introduction	1
1.2 Applications for surfactants	6
1.3 Structure-performance relationships	7
1.3.1 General considerations	7
1.3.2 Status and trends	8
1.4 Industrial applications	11
1.4.1 Building and construction	12
1.4.2 Cosmetics and personal care	13
1.4.3 Crop protection	21
1.4.4 Emulsion polymerisation	26
1.4.5 Food	29
1.4.6 Inks, paints and coatings	31
1.4.7 Metalworking fluids	34
1.4.8 Mining chemicals	36
1.4.9 Oilfield chemicals and petroleum additives	37
1.4.10 Pharmaceuticals	40
1.4.11 Pulp and paper	43
1.4.12 Textiles	46
1.5 Effect surfactants	50
1.5.1 Acetylenic surfactants	50
1.5.2 Fluorosurfactants	52
1.5.3 Polymeric surfactants	53
1.5.4 Silicone surfactants	59
Acknowledgments	61
References	61
<b>2 Surfactants in inverse (water-in-oil) emulsion polymers of acrylamide</b>	<b>66</b>
<b>JAMES N. GREENSHIELDS</b>	
2.1 Introduction	66
2.2 Process	67
2.3 Mechanism and kinetics of polymerization	68
2.4 Emulsifiers	75
2.4.1 Primary emulsifiers	75
2.4.2 Secondary, or 'inverting', emulsifiers	83
2.5 The mechanism of inversion	86
2.6 Commercial uses	91
References	94

<b>3</b>	<b>Interactions between polymers and surfactants</b>	<b>97</b>
	<b>IAN D. ROBB</b>	
3.1	Introduction	97
3.2	Nonionic polymers and nonionic surfactants	98
3.3	Nonionic polymers and ionic surfactants	99
3.4	Polymers and surfactants of opposite charge	101
3.4.1	Anionic polymers with cationic surfactants	101
3.5	Concentrated systems	111
3.6	Adsorption at surfaces	113
3.6.1	Air-liquid interfaces	113
3.6.2	Solid-liquid interfaces	116
3.7	Polymers with hydrophobic side-groups	120
3.7.1	Polymer type	120
3.7.2	Surfactant type	122
3.8	Solid-state properties of polymer-surfactant complexes	123
3.9	Complexes in organic solvents	125
3.10	Summary	125
	References	125
<b>4</b>	<b>Use of surfactants in plastic flotation</b>	<b>129</b>
	<b>MARCELLO GHIANI and PAOLO BEVILACQUA</b>	
4.1	Introduction	129
4.2	Wetting and contact angle	129
4.2.1	Measuring the contact angle	132
4.3	Main characteristics of plastics in relation to flotation	134
4.3.1	Molecular structure	134
4.3.2	Free surface energy	134
4.3.3	Surface polarity	136
4.4	Wetting mechanisms of plastic surfaces	136
4.4.1	Wetting through control of surface tension	136
4.4.2	Wetting through adsorption	138
4.4.3	Wetting through surface modification	138
4.5	The theory of adsorption	138
4.6	Electrical effects at interfaces	142
4.7	Flotation surfactants	145
4.7.1	Ionizable surfactants	145
4.7.2	Nonionic surfactants	146
4.8	Wetting of plastics with use of surfactants	148
	References	153
<b>5</b>	<b>Surface-active agents in the construction industry</b>	<b>155</b>
	<b>TATSUYA MIZUNUMA and AKIFUMI YAMADA</b>	
5.1	Introduction	155
5.2	Concrete and surfactants	156
5.2.1	Workability	156
5.2.2	Strength	156
5.2.3	Durability	156
5.3	History of chemical admixtures	157

5.4	Types of chemical admixture	158
5.4.1	Air-entraining agents	158
5.4.2	Water-reducing agents and high-range water-reducing agents	159
5.4.3	Applications	163
5.5	New concrete with air-entraining-type high-range water-reducing agents	163
5.5.1	Types of air-entraining-type high-range water-reducing agent	165
5.5.2	Mechanism of maintaining fluidity over a long period	165
5.5.3	Applications	167
5.6	Summary	167
	References	168

## **6 The role of surfactants in dynamic wetting 169**

**MICHEL J. DE RUIJTER**

6.1	Introduction	169
6.2	Dynamic wetting	170
6.2.1	Hydrodynamic models	171
6.2.2	Molecular-kinetic model	173
6.2.3	Combined model	175
6.2.4	Microhydrodynamic model	175
6.3	Equilibrium wetting and surfactants	176
6.4	Dynamic wetting and surfactants	178
6.5	Performance surfactants and dynamic wetting	181
6.6	Impacting drops	182
6.7	Monolayer and multilayer spreading	183
6.8	Conclusions	185
	References	185

## **7 Interfacial properties of natural surfactants and their application in drug delivery systems 189**

**HITOSHI YAMAUCHI**

7.1	Introduction	189
7.2	Interfacial phenomena of some natural surfactants at the oil-water interface	189
7.2.1	Behavior of lipids at the oil-water interface	189
7.3	Molecular interactions between natural surfactants and lipid bilayers	191
7.3.1	Molecular interactions between lipids and some steroids in monolayers and bilayers	192
7.3.2	Molecular interactions between phospholipid and lipophilic substances in a lipid bilayer	194
7.3.3	Molecular interactions between lipids and glycolipids in a bilayer	195
7.4	Application of liposomes in drug delivery systems	195
7.4.1	Selective uptake of liposomes containing lactose monofatty-acid derivatives by hepatic parenchymal cells	196
7.4.2	Effect of sialic-acid derivatives on circulation time and tumor concentration of liposomes	197
7.5	Conclusions	199
	Acknowledgments	200
	References	200
