3
edition

Cliff T. Ragsdale

Contents

1. Introduction to Modeling and Decision Analysis 1

Introduction 1

The Modeling Approach to Decision Making 2

Characteristics and Benefits of Modeling 4

Mathematical Models 5

Categories of Mathematical Models 6

The Problem-Solving Process 8

Good Decisions vs. Good Outcomes 11

The World of Management Science 12

Summary 14

References 14

Questions and Problems 14

2. Introduction to Optimization and Linear Programming 16

Introduction 16

Applications of Mathematical Optimization 16

Characteristics of Optimization Problems 17

Expressing Optimization Problems Mathematically 18

Decisions 18 Constraints 18 Objective 19

Mathematical Programming Techniques 20

An Example LP Problem 20

Formulating LP Models 21

Steps in Formulating an LP Model 21

Summary of the LP Model for the Example Problem 22

The General Form of an LP Model 23

Solving LP Problems: An Intuitive Approach 24

Solving LP Problems: A Graphical Approach 25

Plotting the First Constraint 25 Plotting the Second Constraint 26 Plotting the Third Constraint 28 The Feasible Region 29 Plotting the Objective Function 29 Finding the Optimal Solution Using Level Curves 31 Finding the Optimal Solution by Enumerating the Corner Points 32 Summary of Graphical Solution to LP Problems 32

Special Conditions in LP Models 33

Alternate Optimal Solutions 34 Redundant Constraints 34 Unbounded Solutions 36 Infeasibility 38

Summary 39

References 39

Questions and Problems 40

3. Modeling and Solving LP Problems in a Spreadsheet 44

Introduction 44

Spreadsheet Solvers 45

Solving LP Problems in a Spreadsheet 45

The Steps in Implementing an LP Model in a Spreadsheet 46

A Spreadsheet Model for the Blue Ridge Hot Tubs Problem 47

Organizing the Data 47 Representing the Decisions Variables 48 Representing the Objective Function 48 Representing the Constraints 49 Representing the Bounds on the Decision Variables 50

How Solver Views the Model 51

Using Solver 53

Defining the Set (or Target) Cell 55 Defining the Variable Cells 56 Defining the Constraint Cells 57 Defining the Nonnegativity Conditions 58 Reviewing the Model 59 Options 59 Solving the Model 59

Goals and Guidelines for Spreadsheet Design 61

Make vs. Buy Decisions 63

Defining the Decision Variables 63 Defining the Objective Function 64 Defining the Constraints 64 Implementing the Model 64 Solving the Model 66 Analyzing the Solution 66

An Investment Problem 68

Defining the Decision Variables 69 Defining the Objective Function 69 Defining the Constraints 69 Implementing the Model 70 Solving the Model 71 Analyzing the Solution 72

A Transportation Problem 73

Defining the Decision Variables 73 Defining the Objective Function 74 Defining the Constraints 74 Implementing the Model 75 Heuristic Solution for the Model 77 Solving the Model 78 Analyzing the Solution 78

A Blending Problem 79

Defining the Decision Variables 80 Defining the Objective Function 80 Defining the Constraints 80 Some Observations About Constraints, Reporting, and Scaling 81 Re-scaling the Model 82 Implementing the Model 83 Solving the Model 85 Analyzing the Solution 85

A Production and Inventory Planning Problem 86

Defining the Decision Variables 87 Defining the Objective Function 87 Defining the Constraints 88 Implementing the Model 89 Solving the Model 91 Analyzing the Solution 91

A Multi-Period Cash Flow Problem 92

Defining the Decision Variables 93 Defining the Objective Function 94 Defining the Constraints 94 Implementing the Model 96 Solving the Model 99 Analyzing the Solution 100 Modifying the Taco-Viva Problem to Account for Risk (Optional) 100 Implementing the Risk Constraints 102 Solving the Model 104 Analyzing the Solution 105

Data Envelopment Analysis (DEA) 105

Defining the Decision Variables 106 Defining the Objective 106 Defining the Constraints 106 Implementing the Model 107 Solving the Model 109 Analyzing the Solution 114

Summary 116**References 116****The World of Management Science 116****Questions and Problems 117****Cases 133****4. Sensitivity Analysis and the Simplex Method 137****Introduction 137****The Purpose of Sensitivity Analysis 137****Approaches to Sensitivity Analysis 138****An Example Problem 139****The Answer Report 140****The Sensitivity Report 141**

Changes in the Objective Function Coefficients 141 A Note About Constancy 142 Alternate Optimal Solutions 143 Changes in the RHS Values 144 Shadow Prices for Nonbinding Constraints 144 A Note About Shadow Prices 145 Shadow Prices and the Value of Additional Resources 147 Other Uses of Shadow Prices 147 The Meaning of the Reduced Costs 149 Analyzing Changes in Constraint Coefficients 151 Simultaneous Changes in Objective Function Coefficients 152 A Warning About Degeneracy 153

The Limits Report 153

The Sensitivity Assistant Add-in (Optional) 154

Creating Spider Tables and Plots 155 Creating a Solver Table 158 Comments 161

The Simplex Method (Optional) 161

Creating Equality Constraints Using Slack Variables 161 Basic Feasible Solutions 162 Finding the Best Solution 164

Summary 165

References 165

The World of Management Science 166

Questions and Problems 167

Case 174

5. Network Modeling 177

Introduction 177

The Transshipment Problem 177

Characteristics of Network Flow Problems 178 The Decision Variables for Network Flow Problems 179 The Objective Function for Network Flow Problems 180 The Constraint for Network Flow Problems 180 Implementing the Model in a Spreadsheet 182 Analyzing the Solution 183

The Shortest Path Problem 185

An LP Model for the Example Problem 186 The Spreadsheet Model and Solution 187 Network Flow Models and Integer Solutions 189

The Equipment Replacement Problem 189

The Spreadsheet Model and Solution 191

Transportation/Assignment Problems 193

Generalized Network Flow Problems 195

Formulating an LP Model for the Recycling Problem 196 Implementing the Model 197 Analyzing the Solution 199

Maximal Flow Problems 201

An Example of a Maximal Flow Problem 201 The Spreadsheet Model and Solution 203

Special Modeling Considerations 205

Minimal Spanning Tree Problems 206

An Algorithm for the Minimal Spanning Tree Problem 208 Solving the Example Problem 208

Summary 209

References 210

The World of Management Science 210

Questions and Problems 211

Cases 224

6. Integer Linear Programming 230**Introduction 230****Integrality Conditions 230****Relaxation 231****Solving the Relaxed Problem 232****Bounds 234****Rounding 235****Stopping Rules 237****Solving ILP Problems Using Solver 239****Other ILP Problems 241****An Employee Scheduling Problem 243**

Defining the Decision Variables 244 Defining the Objective Function 244 Defining the Constraints 244 A Note About the Constraints 245 Implementing the Model 246 Solving the Model 246 Analyzing the Solution 247

Binary Variables 248**A Capital Budgeting Problem 248**

Defining the Decision Variables 249 Defining the Objective Function 249 Defining the Constraints 250 Setting Up the Binary Variables 250 Implementing the Model 250 Solving the Model 251 Comparing the Optimal Solution to a Heuristic Solution 252

Binary Variables and Logical Conditions 254**The Fixed-Charge Problem 254**

Defining the Decision Variables 255 Defining the Objective Function 256 Defining the Constraints 256 Determining Values for "Big M" 257 Implementing the Model 257 Solving the Model 259 Analyzing the Solution 259

Minimum Order/Purchase Size 262**Quantity Discounts 262**

Formulating the Model 263 The Missing Constraints 263

A Contract Award Problem 264

Formulating the Model: The Objective Function and Transportation Constraints 265 Implementing the Transportation Constraints 265 Formulating the Model: The Side Constraints 266 Implementing the Side Constraints 267 Solving the Model 269 Analyzing the Solution 269

The Branch-and-Bound Algorithm (Optional) 270

Branching 271 Bounding 273 Branching Again 274 Bounding Again 274 Summary of B&B Example 275

Summary 276**References 278****The World of Management Science 278****Questions and Problems 279****Cases 291**

7. Goal Programming and Multiple Objective Optimization 297

Introduction 297

Goal Programming 298

A Goal Programming Example 298

Defining the Decision Variables 299 Defining the Goals 299 Defining the Goal Constraints 299 Defining the Hard Constraints 300 GP Objective Functions 301 Defining the Objective 302 Implementing the Model 303 Solving the Model 305 Analyzing the Solution 305 Revising the Model 305 Trade-offs: The Nature of GP 307

Comments About Goal Programming 308

Multiple Objective Optimization 309

An MOLP Example 310

Defining the Decision Variables 310 Defining the Objectives 311 Defining the Constraints 311 Implementing the Model 311 Determining Target Values for the Objectives 312 Summarizing the Target Solutions 315 Determining a GP Objective 316 The MINIMAX Objective 317 Implementing the Revised Model 318 Solving the Model 319

Comments on MOLP 321

Summary 322

References 323

The World of Management Science 323

Questions and Problems 324

Case 334

8. Nonlinear Programming & Evolutionary Optimization 336

Introduction 336

The Nature of NLP Problems 337

Solution Strategies for NLP Problems 338

Local vs. Global Optimal Solutions 339

Economic Order Quantity Models 342

Implementing the Model 344 Solving the Model 345 Analyzing the Solution 345 Comments on the EOQ Model 347

Location Problems 347

Defining the Decision Variables 349 Defining the Objective 349 Defining the Constraints 349 Implementing the Model 350 Solving the Model and Analyzing the Solution 350 Another Solution to the Problem 352 Some Comments About the Solution to Location Problems 353

Nonlinear Network Flow Problem 353

Defining the Decision Variables 354 Defining the Objective 355 Defining the Constraints 355 Implementing the Model 356 Solving the Model and Analyzing the Solution 356

Project Selection Problems 358

Defining the Decision Variables 360 Defining the Objective Function 360 Defining the Constraints 360 Implementing the Model 361 Solving the Model 363

Optimizing Existing Financial Spreadsheet Models 364

Implementing the Model 365 Optimizing the Spreadsheet Model 366 Analyzing the Solution 366 Comments on Optimizing Existing Spreadsheets 367

The Portfolio Selection Problem 368

Defining the Decision Variables 369 Defining the Objective 370 Defining the Constraints 370 Implementing the Model 371 Analyzing the Solution 373 Handling Conflicting Objectives in Portfolio Problems 374

Sensitivity Analysis 376

Lagrange Multipliers 379 Reduced Gradients 379

Solver Options for Solving NLPs 380

Evolutionary Algorithms 381

Beating the Market 383

A Spreadsheet Model for the Problem 383 Solving the Model 383 Analyzing the Solution 384

The Traveling Salesperson Problem 385

A Spreadsheet Model for the Problem 386 Solving the Model 388 Analyzing the Solution 388

11. Time Series Forecasting 488

Introduction 488

Time Series Methods 489

Measuring Accuracy 489

Stationary Models 490

Moving Averages 491

Forecasting with the Moving Average Model 494

Weighted Moving Averages 494

Forecasting with the Weighted Moving Average Model 497

Exponential Smoothing 497

Forecasting with the Exponential Smoothing Model 499

Seasonality 501**Stationary Data with Additive Seasonal Effects 502**

Forecasting with the Model 505

Stationary Data with Multiplicative Seasonal Effects 506

Forecasting with the Model 509

Trend Models 509

An Example 509

Double Moving Average 510

Forecasting with the Model 512

Double Exponential Smoothing (Holt's Method) 513

Forecasting with Holt's Method 515

Holt-Winter's Method for Additive Seasonal Effects 516

Forecasting with Holt-Winter's Additive Method 519

Holt-Winter's Method for Multiplicative Seasonal Effects 521

Forecasting with Holt-Winter's Multiplicative Method 523

Modeling Time Series Trends Using Regression 525**Linear Trend Model 525**

Forecasting with the Linear Trend Model 526

Quadratic Trend Model 528

Forecasting with the Quadratic Trend Model 530

Modeling Seasonality with Regression Models 531**Adjusting Trend Predictions with Seasonal Indices 531**

Computing Seasonal Indices 532 Forecasting with Seasonal Indices 533 Refining the Seasonal Indices 535

Seasonal Regression Models 536

The Seasonal Model 538 Forecasting with the Seasonal Regression Model 540

Crystal Ball Predictor 541

Using CB Predictor 542

Combining Forecasts 547**Summary 548****References 548****The World of Management Science 548****Questions and Problems 549****Cases 556**

12. Introduction to Simulation Using Crystal Ball 560

Introduction 560

Random Variables and Risk 561

Why Analyze Risk? 561

Methods of Risk Analysis 562

Best-Case/Worst-Case Analysis 562 What-If Analysis 563 Simulation 564

A Corporate Health Insurance Example 564

A Critique of the Base Case Model 566

Spreadsheet Simulation Using Crystal Ball 567

Starting Crystal Ball 567

Random Number Generators 568

Discrete vs. Continuous Random Variables 570

Preparing the Model for Simulation 571

Alternate RNG Entry 574

Running the Simulation 574

Selecting the Output Cells to Track 574 Selecting the Number of Iterations 575

Determining the Sample Size 577 Running the Simulation 577

Data Analysis 578

The Best Case and the Worst Case 578 Viewing the Distribution of the Output Cells

579 Viewing the Cumulative Distribution of the Output Cells 579 Obtaining Other

Cumulative Probabilities 581

Incorporating Graphs and Statistics into a Spreadsheet 581

The Uncertainty of Sampling 582

Constructing a Confidence Interval for the True Population Mean 583 Constructing

a Confidence Interval for a Population Proportion 584 Sample Sizes and Confidence

Interval Widths 585

The Benefits of Simulation 586

Additional Uses of Simulation 586

A Reservation Management Example 586

Implementing the Model 587 Using the Decision Table Tool 588

An Inventory Control Example 592

Creating the RNGs 593 Implementing the Model 593 Replicating the Model 597

Optimizing the Model 597 Comments on Using OptQuest 600

A Project Selection Example 601

A Spreadsheet Model 602 Solving the Problem with OptQuest 603 Finding a

Solution with Less Risk 605
