

Handbook of Advanced Electronic and Photonic Materials and Devices

10

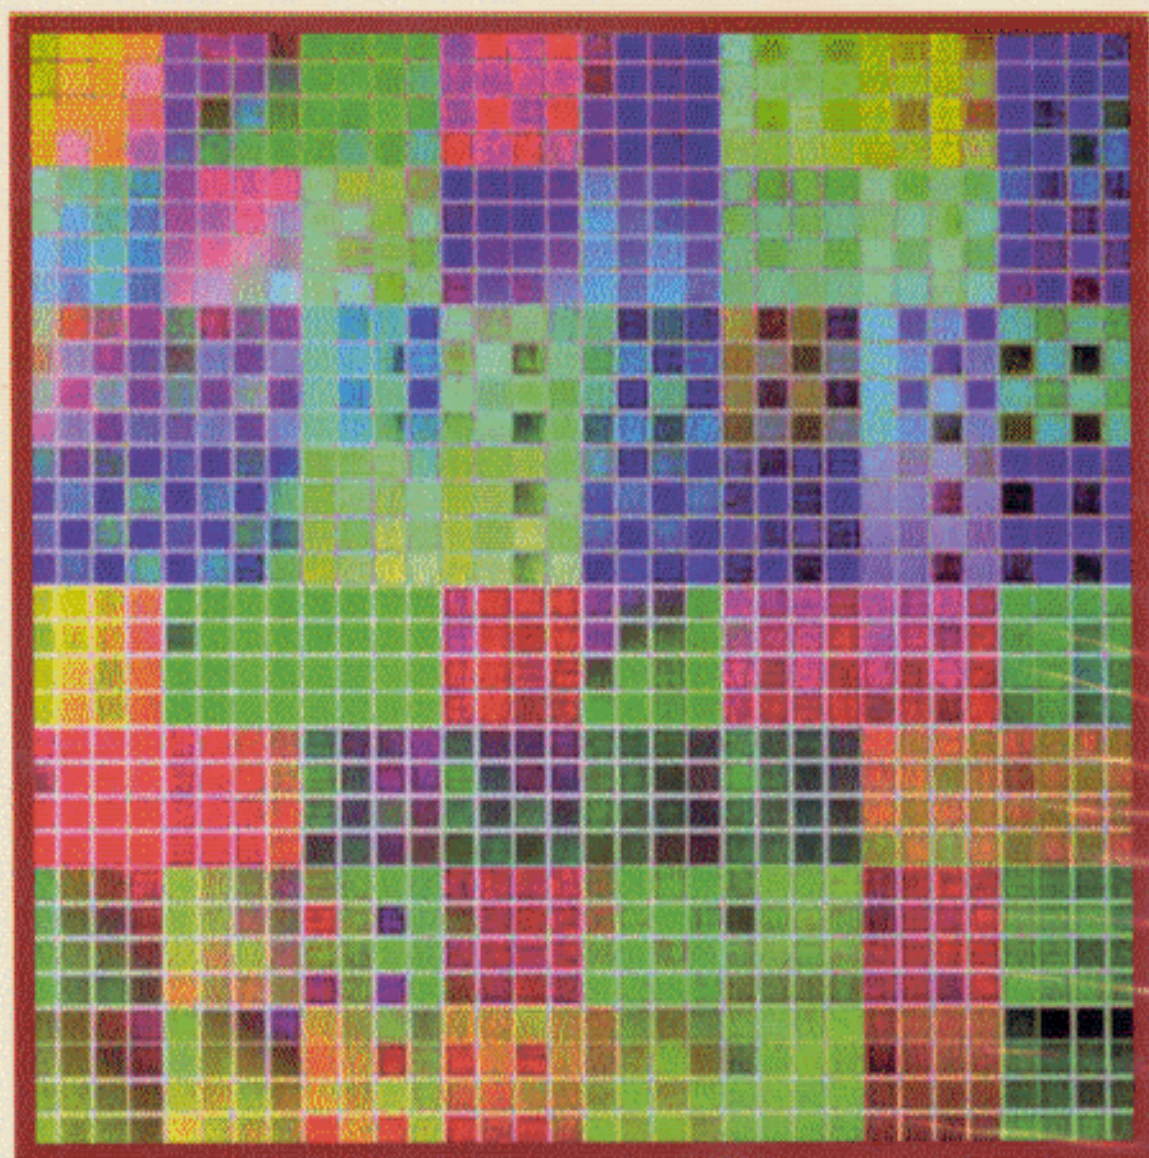

Edited by

Hari Singh Nalwa

Light-Emitting Diodes,
Lithium Batteries and
Polymer Devices

Foreword by

Nicolaas Bloembergen, Nobel Laureate

ACADEMIC
PRESS

Contents

About the Editor	xvii
List of Contributors	xix
Volume Listing	xxi

Chapter 1. ORGANIC AND POLYMER-BASED LIGHT-EMITTING DIODES

Thien-Phap Nguyen, Philippe Molinie, Pierre Destruel

1. Introduction	3
2. Overview of Organic Materials and Polymers Used in LEDs	4
2.1. Small Molecules	5
2.2. Conjugated Dendrimers	7
2.3. Light Emitting Conjugated Polymers	7
3. Photoluminescence and Electroluminescence	11
3.1. Basic Concepts	12
3.2. Excitation of Luminescent Centers	15
3.3. The Excited State	19
3.4. The Radiative De-Excitation	21
4. Transport Mechanisms	25
4.1. General Considerations on the Conduction Mechanisms in Diodes	25
4.2. Conduction Mechanisms in Polymer-Based and Organic LEDs: Experimental Data and Interpretation	28
4.3. Role of the Emitter-Metal Interface in the Transport	32
4.4. Role of the Transport Layers	33
5. Degradation Mechanisms	35
5.1. Degradation Mechanisms in Inorganic Semiconductor-Based LEDs	35
5.2. Degradation Mechanisms in Organic and Polymer-Based LEDs	35
5.3. Concluding Remarks	40
6. Perspectives	41
References	42

Chapter 2. OPTICAL DEVICES BASED ON CONDUCTIVE POLYMERS

*W. A. Gazotti, A. F. Nogueira, E. M. Girotto, L. Micaroni, M. Martini,
S. das Neves, M.-A. De Paoli*

1. Introduction	54
1.1. Historical Approach	54
1.2. Doping Processes in Conducting Polymers	54
1.3. Conductivity and Transport in Conducting Polymers	55
1.4. Synthesis of Conducting Polymers	57
1.5. Optical Behavior	58
2. Electrochromic Devices (ECD)	59
2.1. Introduction	59
2.2. Present Technology	59
2.3. Operation of an ECD	60
2.4. Characterization of ECD	61
2.5. Conducting Polymers in ECD	62
2.6. Applications	65
2.7. ECD and Photoelectrochemical Cells: A Promising Association	66
3. Photovoltaic Devices	66
3.1. Introduction	66

3.2. Schottky Junction	67
3.3. Heterojunction	69
3.4. Junctions between Conducting Polymers	70
3.5. Multilayer Conducting Polymer Heterostructures	71
4. Photoelectrochemical Devices	74
4.1. Introduction	74
4.2. Basic Process of a Photoelectrochemical Energy Conversion Device	74
4.3. Conducting Polymers in Photoelectrochemical Devices	76
5. Electroluminescent Devices	80
5.1. Light-Emitting Diodes (LEDs)	80
5.2. Light-Emitting Electrochemical Cells	83
6. Optical Sensors, Indicators and Photolithography	85
6.1. pH Optodes and Biosensors	85
6.2. Optical Indicators in General Applications	86
6.5. Photolithographic Patterning of Conducting Polymers	88
6.6. Conducting Polymers in Nonlinear Optic Materials Applications	90
7. Optical Memory Devices	90
7.1. Thermo-, Photo-, and Ionochromic Devices	90
7.2. Photorefractive Conducting Polymers for Data Storage	91
8. Final Remarks	92
Acknowledgment	92
References	92

Chapter 3. INTERCALATION COMPOUNDS FOR ADVANCED LITHIUM BATTERIES

C. Julien, G. A. Nazri

1. Introduction	99
2. Materials for Lithium Batteries	100
2.1. Key Parametric Factors for Battery Materials	100
2.2. Classification of Materials for Lithium Batteries	103
3. Inorganic Chalcogenides	106
3.1. Transition-Metal Dichalcogenides	106
3.2. Transition-Metal Phosphorus Trichalcogenide Compounds	126
3.3. Nontransition-Metal Chalcogenides	132
3.4. Fiberlike Chalcogenides	138
3.5. Chevrel-Phase Compounds	140
3.6. Tin Chalcogenides	140
4. Inorganic Oxides	142
4.1. Molybdenum Oxides	143
4.2. Vanadium Oxides	150
4.3. Rutile Structures	154
4.4. Manganese Dioxide	154
4.5. Tungsten Oxides	154
4.6. Layered LiMO_2 Compounds	155
4.7. Lithiated Manganese Spinel	166
4.8. Inverse Spinel LiNiVO_4	172
5. Carbonaceous Materials	175
5.1. Structural and Electronic Properties of Graphite	175
5.2. Transport Properties of Graphite	176
5.3. Properties of Graphite Intercalation Compounds	176
5.4. Electrodes Based on Carbon Materials	177
References	181

Chapter 4. POLYMER ELECTRETS FOR ELECTRONICS, SENSORS, AND PHOTONICS

Simona Bauer-Gogonea, Siegfried Bauer

1. Introduction	185
2. Polymer Electrets	187

2.1. Charge Electrets	187
2.2. Amorphous Dipole Electrets	192
2.3. Semicrystalline Dipole Electrets	201
3. Charging and Poling	206
3.1. Corona Poling	207
3.2. Electron-Beam Poling	208
3.3. Liquid-Contact Poling	209
3.4. Electrode Poling	209
3.5. Photothermal Poling	211
3.6. Gas-Assisted Poling	211
3.7. Photoinduced and All-Optical Poling	211
3.8. Multistep Poling	213
3.9. Poling Techniques with High Spatial Resolution	213
4. Electrical and Optical Investigation Techniques	214
4.1. Linear and Nonlinear Dielectric Relaxation Spectroscopy	214
4.2. Thermally Stimulated Discharge or Depolarization	214
4.3. Piezo- and Pyroelectric Techniques	215
4.4. Pyroelectricity and Pyroelectric Microscopy	216
4.5. Linear and Nonlinear Optical Techniques	217
4.6. New Thermal Analysis and Dipole Relaxation Spectroscopy Techniques	219
5. Selected Applications	219
5.1. Charge Electret Devices	219
5.2. Piezo- and Pyroelectric Devices	220
5.3. Optical Devices	221
6. Summary	224
Acknowledgment	224
References	224

Chapter 5. CHARGE-TRANSPORTING POLYMERS AND MOLECULAR GLASSES

J. V. Grazulevicius, P. Strohriegel

1. Introduction	233
2. Basic Principles and Experimental Techniques	234
3. Applications	235
3.1. Electrophotography	235
3.2. Light-Emitting Diodes	237
3.3. Photovoltaic Devices	237
3.4. Photorefractive Materials	239
4. Charge-Transporting Polymers	239
4.1. Hole-Transporting Polymers	239
4.2. Electron-Transporting Polymers	252
4.3. Bipolar Polymers	256
5. Charge-Transporting Molecular Glasses	258
5.1. Hole-Transporting Molecular Glasses	259
5.2. Electron-Transporting Molecular Glasses	264
5.3. Bipolar Molecular Glasses	267
References	268

Chapter 6. ELECTROCHEMICALLY PREPARED THIN-FILM SOLAR CELLS

Figen Kadirgan

1. Introduction	275
2. Electrodeposited CdS Thin Films for Solar Cell Applications	276
2.1. Forming Process for CdS Films	278
2.2. Effect of Electrolyte Nature and pH on the Film-Formation Process	279
2.3. Variation of Faradaic Efficiency in Function of pH	279
2.4. Variation of Charge in Function of Thickness of the CdS Film	279
2.5. Effects of $S_2O_3^{2-}$ Concentration on the Plating Time	280
2.6. Optical Properties of Electrodeposited CdS Films	280

2.7. Structural Properties	281
2.8. Surface Properties	282
3. Aqueous Electrochemistry of Tellurium at Different Electrodes	284
4. Electrodeposition of Cadmium Telluride Thin Films	285
5. Electrodeposited <i>n</i> -CdS/ <i>p</i> -CdTe Thin-Film Solar Cells	295
6. Electroplated Mercury Cadmium Telluride Thin-Film Solar Cells	297
7. Electrodeposition of Other Cadmium Chalcogenide Thin-Films	297
8. Electrodeposition of I-III-VI ₂ Compound Semiconductors for Solar-Cell Applications .	301
References	307
Index	311
