## Chapter 1. HIGH- $T_c$ SUPERCONDUCTORS TOWARD SMALL SCALE APPLICATIONS

*R. Gerbaldo, G. Ghigo, L. Gozzelino, E. Mezzetti*

|   |    |
|---|----|
| Introduction  | 2  |
| 1. Main Structural and Physical Properties of HTS Compounds   | 2  |
| 1.1. Structural Characteristics of HTS Compounds              | 2  |
| 1.2. Doping Dependence of the Conduction Properties           | 4  |
| 1.3. Relevant Lengths and Anisotropy                          | 4  |
| 1.4. Phase Diagrams of HTSs                                   | 5  |
| 1.5. As Grown Defects   | 10 |
| 1.6. Columnar Defects   | 11 |
| 1.7. A Directory on Josephson Junctions                       | 11 |
| 2. HTS Thin Films, Thick Films, and Josephson Junctions       | 17 |
| 2.1. HTS Thin Films   | 17 |
| 2.2. Thick Films  | 20 |
| 2.3. Josephson Junctions                                      | 23 |
| 3. SQUIDS   | 26 |
| 3.1. Introduction   | 26 |
| 3.2. HTS SQUID Fabrication Technology                         | 26 |
| 3.3. DC SQUIDS  | 27 |
| 3.4. RF SQUIDS  | 29 |
| 3.5. Gradiometers   | 30 |
| 3.6. Applications   | 30 |
| 4. Radiation Detectors  | 36 |
| 4.1. Introduction   | 36 |
| 4.2. Superconducting Junction-based Detectors                 | 37 |
| 4.3. Calorimeters and Bolometers                              | 39 |
| 4.4. Other High- $T_c$ Detectors                              | 43 |
| 4.5. Superconductor Device Radiation Hardness (Insight)       | 43 |
| 5. Microwave Applications of High-Temperature Superconductors | 44 |
| 5.1. Introduction   | 44 |
| 5.2. Nonlinear Properties of HTSs                             | 45 |
| 5.3. Resonators   | 46 |
| 5.4. Filters  | 48 |
| 5.5. Tunable Filters  | 50 |
| 5.6. Other Passive Applications                               | 53 |
| 5.7. Transistors  | 54 |
| 5.8. Oscillators  | 57 |
| 5.9. Mixers   | 57 |
| 6. Digital Circuits and Quantum Computing (Insight)           | 59 |
| 6.1. Application Potential                                    | 59 |
| 6.2. Quantum Computing  | 60 |
| References  | 61 |

## Chapter 2. PROCESSING AND CHARACTERIZATION OF BI-BASED SINGLE CRYSTALS AND TAPES

*Hua Kun Liu, Mihail Ionescu, Yuan Chang Guo*

|  |     |
|--|-----|
| 1. Introduction . . . . .  | 71  |
| 1.1. Superconductivity . . . . .   | 71  |
| 1.2. High- $T_c$ Superconductors (HTS) . . . . .                             | 72  |
| 1.3. Properties of High- $T_c$ Superconductors (HTS) . . . . .               | 72  |
| 1.4. Bi-based High- $T_c$ Superconductors . . . . .                          | 73  |
| 1.5. High- $T_c$ Superconductors for Power Applications . . . . .            | 73  |
| 2. Bi-2212 Tapes by PIT . . . . .  | 75  |
| 2.1. Bi-2212 Powder . . . . .  | 75  |
| 2.2. Mechanical Processing of Bi-2212/Ag Wires and Tapes by PIT . . . . .    | 76  |
| 2.3. Other Fabrication Procedures for Bi-2212 Tapes . . . . .                | 79  |
| 2.4. Heat Treatment of Bi-2212/Ag Tapes . . . . .                            | 79  |
| 2.5. Phase Relations During the Heat Treatment of Bi-2212/Ag Tapes . . . . . | 83  |
| 2.6. Microstructure of Bi-2212/Ag Tapes Produced by PIT . . . . .            | 85  |
| 3. Silver-Sheathed Bi-2223 Superconducting Composite Tapes . . . . .         | 89  |
| 3.1. Precursor Powders . . . . .   | 89  |
| 3.2. Mechanical Processing . . . . .   | 92  |
| 3.3. Heat Treatment . . . . .  | 97  |
| 3.4. Characterization . . . . .  | 106 |
| 4. Bi-2212 Single Crystals . . . . .   | 113 |
| 4.1. Self-Flux Growth . . . . .  | 114 |
| 4.2. Alkali-Halide Flux Growth . . . . .                                     | 114 |
| 4.3. Hardness of Bi-2212 Crystals . . . . .                                  | 116 |
| 5. Flux Pinning and Current-Limiting Mechanisms . . . . .                    | 117 |
| 5.1. Intrinsic Pinning . . . . .   | 117 |
| 5.2. Surface Barrier Pinning . . . . .                                       | 117 |
| 5.3. Defect Pinning . . . . .  | 117 |
| 5.4. Inclusion Pinning . . . . .   | 121 |
| 5.5. Precipitate Pinning . . . . .   | 121 |
| 5.6. Current-Limiting Mechanism . . . . .                                    | 122 |
| Acknowledgments . . . . .  | 124 |
| References . . . . .   | 124 |

## Chapter 3. GRAIN CONNECTIVITY AND VORTEX PINNING IN HIGH-TEMPERATURE SUPERCONDUCTORS

*J. Horvat*

|   |     |
|---|-----|
| 1. Introduction . . . . .   | 129 |
| 2. High-Temperature Superconductors . . . . .   | 130 |
| 2.1. Structure . . . . .  | 130 |
| 2.2. Superconductivity in HTS . . . . .   | 131 |
| 2.3. Current Transport through HTS . . . . .  | 133 |
| 3. Grain Connectivity . . . . .   | 139 |
| 3.1. Grain Misalignment . . . . .   | 140 |
| 3.2. Vortex Pinning in Grain Boundaries . . . . .   | 144 |
| 3.3. Structure of Grain Boundaries . . . . .  | 145 |
| 3.4. Models for Grain Connectivity . . . . .  | 153 |
| 3.5. Mechanisms of Current Transport in $\text{Bi}_2\text{Sr}_2\text{Ca}_2\text{Cu}_3\text{O}_{10}$ -Ag Tapes . . . . . | 156 |
| 4. Vortex Pinning . . . . .   | 157 |
| 4.1. Mechanisms of Vortex Pinning . . . . .   | 157 |
| 4.2. Vortices in HTS . . . . .  | 159 |
| 4.3. Vortex State in HTS . . . . .  | 160 |
| 5. Summary . . . . .  | 164 |
| Acknowledgment . . . . .  | 164 |
| References . . . . .  | 164 |

## Chapter 4. YTTRIUM BARIUM COPPER OXIDE AS AN INFRARED RADIATION SENSING MATERIAL

*Donald P. Butler, Zeynep Çelik-Butler, Roman Sobolewski*

|   |     |
|---|-----|
| 1. Introduction   | 169 |
| 2. Infrared Detection Basics  | 170 |
| 2.1. Hot-Electron Devices   | 171 |
| 2.2. Bolometers   | 173 |
| 2.3. Pyroelectric Detectors   | 174 |
| 3. Superconducting YBaCuO   | 174 |
| 3.1. Superconducting Hot-Electron Photodetectors                                | 175 |
| 3.2. Superconducting Bolometers   | 177 |
| 4. Semiconducting YBaCuO  | 178 |
| 4.1. Material Properties of Semiconducting YBaCuO                               | 178 |
| 4.2. Electronic Properties of Semiconducting YBaCuO                             | 180 |
| 4.3. Semiconducting YBaCuO as a Room-Temperature Bolometer                      | 182 |
| 4.4. Semiconducting YBaCuO as a Room-Temperature Pyroelectric Detector          | 186 |
| 4.5. Comparison of Semiconducting YBaCuO to Other Typical Uncooled IR Materials | 192 |
| 5. Conclusion   | 193 |
| Acknowledgments   | 193 |
| List of Mathematical Symbols  | 193 |
| References  | 194 |

## Chapter 5. HIGH-MAGNETIC-FIELD STUDIES OF QUASI-TWO-DIMENSIONAL ORGANIC CONDUCTORS BASED ON BEDT-TTF

*J. Singleton*

|  |     |
|--|-----|
| 1. General Introduction to BEDT-TTF Charge-Transfer Salts  | 197 |
| 1.1. Introduction  | 197 |
| 1.2. Crystal Structure: General Points   | 198 |
| 2. Bandstructure-Measurements in Magnetic Fields   | 200 |
| 2.1. Basic Principles  | 200 |
| 2.2. Experimental Considerations   | 204 |
| 2.3. Angle-Dependent Magnetoresistance Oscillations (AMROs)  | 205 |
| 2.4. Magneto-optical Techniques  | 208 |
| 3. $\kappa$ -Phase BEDT-TTF Salts  | 212 |
| 3.1. Introduction  | 212 |
| 3.2. Bandstructure and Fermi Surfaces  | 212 |
| 3.3. Magnetic Quantum Oscillation Measurements   | 212 |
| 3.4. What Can High-Magnetic-Field Measurements Tell One about the Nature of Superconductivity in $\kappa$ -Phase BEDT-TTF Salts?   | 216 |
| 4. $\alpha$ -Phase BEDT-TTF Salts  | 221 |
| 4.1. Introduction  | 221 |
| 4.2. Ideas on the LTLF State   | 222 |
| 4.3. $\alpha$ -(BEDT-TTF) <sub>2</sub> NH <sub>4</sub> Hg(SCN) <sub>4</sub> , $\alpha$ -(BEDT-TTF) <sub>2</sub> KHg(SeCN) <sub>4</sub> , and $\alpha$ -(BEDT-TTF) <sub>2</sub> TlHg(SeCN) <sub>4</sub> | 223 |
| 4.4. $\alpha$ -(BEDT-TTF) <sub>2</sub> MHg(SCN) <sub>4</sub> ( $M = K, Tl, Rb$ )   | 223 |
| 4.5. Model for Fermi Surfaces of $\alpha$ -Phase BEDT-TTF Salts Based on High-Field Data   | 227 |
| 4.6. Eddy-Current Resonances, Quantum Hall Effect, and Edge States in $\alpha$ -Phase BEDT-TTF Salts   | 230 |
| 4.7. Effect of Hydrostatic Pressure and Strain   | 236 |
| 5. $\beta$ - and $\beta''$ -Phase BEDT-TTF Salts   | 238 |
| 5.1. $\beta$ -Phase BEDT-TTF Salts   | 238 |
| 5.2. $\beta''$ -BEDT-TTF Salts   | 239 |
| 6. Future Directions   | 239 |
| Acknowledgments  | 240 |
| References   | 240 |

**Chapter 6. QUINONOID  $\pi$ -EXTENDED TETRATHIAFULVALENES (TTFs)***Nazario Martín, Enrique Ortí*

|  |     |
|--|-----|
| 1. Introduction  | 245 |
| 2. Tetrathiafulvalene (TTF)  | 248 |
| 2.1. Molecular and Electronic Structure                                  | 248 |
| 2.2. Evolution upon Oxidation  | 249 |
| 2.3. Insertion of a Quinonoid Spacer                                     | 249 |
| 3. $\pi$ -Extended <i>p</i> -Quinodimethane Analogues of TTF             | 250 |
| 3.1. The Anthraquinodimethane Derivatives                                | 250 |
| 3.2. More Extended Derivatives   | 252 |
| 3.3. One-Dithiole Ring Systems   | 254 |
| 4. Dimers of $\pi$ -Extended TTFs  | 256 |
| 5. Tetrathiafulvalene Derivatives Exhibiting Second-Order Nlo Properties | 257 |
| 6. Extended-TTFs for Photovoltaic Applications                           | 259 |
| Acknowledgments  | 262 |
| References   | 262 |

**Chapter 7. SUPRAMOLECULAR ASPECTS OF ORGANIC CONDUCTORS***Tomoyuki Akutagawa, Tatsuo Hasegawa, Takayoshi Nakamura*

|   |     |
|---|-----|
| 1. Introduction   | 267 |
| 2. TTF-based Supramolecular System  | 268 |
| 2.1. Multi-TTF Annulated Molecules  | 268 |
| 2.2. TTF Cyclophanes  | 269 |
| 2.3. TTF annulated Crown Ethers   | 270 |
| 2.4. TTF Catenanes and Rotaxanes  | 271 |
| 3. Supramolecular Entities in the Molecular Conductor Crystals                      | 272 |
| 3.1. Supramolecular Cations in TCNQ and DCNQI-based Molecular Conductors            | 273 |
| 3.2. Supramolecular Cations in Ni(dmit) <sub>2</sub> -based Molecular Conductors    | 274 |
| 3.3. Supramolecular Anion Structures in TTF-based Molecular Conductors              | 279 |
| 4. Molecular Conductors in Ordered Thin Films                                       | 280 |
| 4.1. Langmuir–Blodgett Films  | 280 |
| 4.2. Self-assembly Films  | 286 |
| 5. Supramolecular Aspects of Electronic Phenomena in Organic Charge-Transfer Solids | 288 |
| 5.1. Collective Electronic Phenomena in Charge-Transfer Complexes                   | 288 |
| 5.2. Supramolecular Aspects of Electronic Phenomena in BEDT-TTF Complexes           | 291 |
| 6. Concluding Remarks   | 297 |
| References  | 297 |

**Chapter 8. INTRAMOLECULAR ELECTRONIC-TRANSFER PHENOMENA IN ORGANIC MIXED-VALENCE COMPOUNDS***Daniel Ruiz-Molina, Josep Sedó, Concepció Rovira, Jaume Veciana*

|   |     |
|---|-----|
| 1. Introduction   | 303 |
| 2. General Considerations about Mixed-Valence Systems   | 307 |
| 2.1. Classification of Robin and Day  | 307 |
| 2.2. Hush Model   | 307 |
| 2.3. Piepho–Krausz–Schatz (PKS) Model   | 308 |
| 3. Organic Mixed-Valence Compounds: Background  | 309 |
| 3.1. Anion-Radicals Derived from Conjugated Diquinones and Diimides   | 310 |
| 3.2. Cation-Radicals Derived from Bis(tetrathiafulvalenes)  | 310 |
| 3.3. Cation-Radicals Derived from Bis(hydrazines)   | 311 |
| 3.4. Ion-Radicals Derived from $\pi$ -conjugated Polyarylmethyls and Polyarylamines                               | 313 |
| 4. Mixed-Valence Systems Based on Polychlorotriphenylmethyl Radicals  | 313 |
| 4.1. Polychlorinated Triphenylmethyl Radicals as Electrophoric Units  | 313 |
| 4.2. Intramolecular Electron-Transfer Phenomena in an Anion-Radical Case  | 315 |
| 4.3. Intramolecular Electron-Transfer Phenomena in a Triplet-Anion Case   | 316 |
| 4.4. Intramolecular Electron-Transfer Phenomena in a Radical-Anion Species with a <i>p</i> -Divinylbenzene Bridge | 320 |

# CONTENTS

|    |   |     |
|----|---|-----|
| 5. | Metallocene Substituted Diradical: Use of an Electronic Relay . . . . . | 323 |
| 6. | Summary . . . . .   | 325 |
|    | Acknowledgements . . . . .  | 325 |
|    | References . . . . .  | 325 |

## Chapter 9. CONDUCTING ORGANIC COMPOSITES

*Jean-Pierre Farges, André Brau*

|    |   |     |
|----|---|-----|
| 1. | Introduction . . . . .  | 329 |
| 2. | Semiconducting Organic–Organic Charge-Transfer Composites . . . . .   | 330 |
|    | 2.1. First Evidence of a Solid–Solid Charge-Transfer Reaction: Reaction between TEAI and TCNQ . . . . .                       | 330 |
|    | 2.2. Kinetic Aspects of the Solid–Solid Reaction between TEAI and TCNQ . . . . .  | 333 |
|    | 2.3. Induced Effect of Charge Localization in Complex TCNQ Salts: Example of TEA(TCNQ) <sub>2</sub> . . . . .                 | 334 |
|    | 2.4. General Aspects of the Competition between Solid–Solid Charge-Transfer Reaction and Charge Localization . . . . .        | 336 |
|    | 2.5. Comparative Effects of Mechanical Damage and Radiation Damage in TCNQ Salts: Example of TEA(TCNQ) <sub>2</sub> . . . . . | 336 |
|    | 2.6. Solid–Solid Reaction of TTF with TCNQ. Comparison with Reaction of TEA(TCNQ) with TCNQ . . . . .                         | 337 |
|    | 2.7. Solid–Solid Reaction between TTF and TEA(TCNQ) <sub>2</sub> : Conductivity Study . . . . .                               | 343 |
|    | 2.8. Reaction of TEA-TCNQ with TCNQ: Effect of the Deuteration of TCNQ on the Infrared Spectra . . . . .                      | 344 |
|    | 2.9. Evaluation from Infrared Studies of Charge-Transfer and Charge-Distribution in TCNQ Systems . . . . .                    | 346 |
| 3. | Organic–Mineral Composites Based on Metallic Copper and Derivatives . . . . .   | 350 |
|    | 3.1. Solid–Solid Charge-Transfer Reaction between Copper and TCNQ . . . . .   | 350 |
|    | 3.2. Interaction between YBaCuO and TCNQ . . . . .  | 357 |
| 4. | The Metallic State in Organic Composites . . . . .  | 359 |
|    | 4.1. Realization and Conductivity Study of Metallic Composites . . . . .  | 359 |
|    | 4.2. Superconductivity in (BEDT-TTF) <sub>2</sub> -I <sub>3</sub> Composites . . . . .  | 362 |
|    | 4.3. Local Structural Order in (BEDT-TTF) <sub>2</sub> -I <sub>3</sub> Composites . . . . .                                   | 363 |
|    | 4.4. Magnetic Susceptibility Measurements . . . . .   | 364 |
|    | 4.5. Infrared Reflectance . . . . .   | 364 |
|    | 4.6. Prospect on New Metallic Organic Composites . . . . .  | 366 |
| 5. | Conclusion . . . . .  | 367 |
|    | References . . . . .  | 368 |
