Chapter 1. CONDUCTION AND CONDUCTION-RELATED PHENOMENA IN ION-CONDUCTING GLASSES

Akira Doi

1. What is "Glass"?	1
2. Ionic Conduction in Glass	4
2.1. Ionic Diffusion	4
2.2. Ionic Conduction	5
2.3. Ion-Conducting Glass	6
2.4. What Is "Polarization"?	11
2.5. Techniques for Studying Ionic Conduction and Conduction-Related Phenomena	12
3. Conduction-Related Polarization in Glasses	14
3.1. Background	14
3.2. Electrical Response in the Frequency Domain	16
3.3. Electrical Response in the Temperature Domain	20
3.4. Electrical Response in the Time Domain	23
4. Electrode-Glass Interfacial Phenomena	25
4.1. Positive-Ion-Depleted Region near the Anode	25
4.2. Field-Induced Injection of Anode Metal Ions	33
4.3. Electrolysis of Glass until Dielectric Breakdown	38
5. Applications and Future Prospects	41
References	44

Chapter 2. PHOTOINDUCED PHENOMENA IN AMORPHOUS CHALCOGENIDES: FROM PHENOMENOLOGY TO NANOSCALE

Alexander V. Kolobov, Kazunobu Tanaka

Introduction	47
1. Preparation and Fundamental Properties	48
1.1. Preparation of Amorphous Chalcogenides	48
1.2. Structure	49
1.3. Defects	51
1.4. Electronic States	53
1.5. Electrical Properties	55
1.6. Optical Absorption	56
1.7. Photoexcitation and Recombination	57
2. Photoinduced Metastability	59
2.1. Reversible Photostructural Changes	59
2.2. Photoinduced Electron Spin Resonance and Related Phenomena	68
2.3. Photoinduced Anisotropy	73
2.4. Photoinduced Change in the Phase State	76
2.5. Other Photoinduced Phenomena	78
2.6. Metastability in Differently Prepared Chalcogenides	79
2.7. Radiation-Induced Changes	80

3. Photodissolution and Photodiffusion of Metals; Photodoping	80
3.1. Photodissolution	80
3.2. Lateral Diffusion	81
3.3. Reaction Product	82
3.4. Mechanism of Photodiffusion	83
3.5. Photoinduced Modification of Ag-Containing Chalcogenides and Photodeposition of Silver	84
4. Applications of Amorphous Chalcogenides	84
5. Concluding Remarks	85
Acknowledgment	85
References	85

Chapter 3. PHOTOINDUCED AND ELECTRON-BEAM PHENOMENA IN Ag-RICH AMORPHOUS CHALCOGENIDE SEMICONDUCTORS

Takeshi Kawaguchi, Keiji Tanaka, Stephen R. Elliott

1. Introduction	92
2. Basic Properties of Photoinduced Surface Deposition	93
2.1. Shape and Size of Photodeposited Ag Particles	93
2.2. Compositional Dependence	93
2.3. Effects of Light Intensity and Illumination Time	96
2.4. Effects of Photon Energy and Temperature	97
2.5. Growth Kinetics of Ag Deposits	98
2.6. Suppression of PSD by an Overlaying Semitransparent Metallic Film	99
2.7. Other Aspects	99
3. Photoelectroionic Processes in Ag-Rich Chalcogenide Glasses	99
3.1. Dember and Photovoltaic Effects	99
3.2. Depth Profile of Ag Concentration Under the Illuminated Surface	100
3.3. Mechanism of Ag ⁺ Migration in the PSD Phenomenon	101
4. Basic Research for Applications to Optical Recording Devices	102
4.1. Reversible Photowriting and Thermal Erasure of Ag Patterns	102
4.2. Optimal Ag Content and Film Thickness for Applications	103
4.3. Enhancement of the PSD Effect by Addition of Small Amounts of Au	104
4.4. Storage Test of Ag Patterns	106
5. Structural Studies of Ag-Rich Chalcogenide Glasses and Films	106
5.1. Ag-As-S Bulk Glasses	106
5.2. Ag-Ge-S Films	110
6. Thermodynamic Consideration of the PSD Phenomenon	111
6.1. Compositional Dependence	112
6.2. Temperature Dependence	112
6.3. Reversibility by Annealing	113
7. Electron-Beam-Induced Surface Deposition	113
7.1. Change of Ag-Rich Films by Electron-Beam Irradiation	114
7.2. Mechanism of ESD	115
7.3. Other Aspects	116
Acknowledgments	116
References	116

Chapter 4. PHOTOINDUCED ANISOTROPY IN CHALCOGENIDE GLASS

Keiji Tanaka

Introduction	120
1. Fundamentals of Chalcogenide Glass	120
1.1. Covalent Chalcogenide Glass	120
1.2. Cation-Containing Chalcogenide Glass	121
1.3. Photoinduced Phenomena	121
2. Photoinduced Anisotropy: Introduction	122
2.1. Historical	122
2.2. Weigert Effects in Solids	124

3. Photoinduced Linear Anisotropy in Covalent Glass	124
3.1. Measurements	124
3.2. Kinetics	125
3.3. Light-Intensity Dependence	126
3.4. Spectral Change	126
3.5. Excitation-Energy Dependence	126
3.6. Temperature Dependence	127
3.7. Annealing Characteristics	128
3.8. Material Dependence	128
3.9. Photoinduced Anisotropy Induced by Unpolarized Light	129
3.10. Photoinduced Stress Generation	130
3.11. Microscopic Structural Change	130
4. Mechanism of Photoinduced Linear Anisotropy	131
4.1. Anisotropy in Chalcogenide Glass	131
4.2. Relation between Scalar and Vector Effects	131
4.3. Phenomenological Models	132
4.4. Structural Models	132
4.5. Remaining Problems	134
5. Related Phenomena in Covalent Glass	134
5.1. Photoinduced Anisotropic Crystallization	134
5.2. Photoinduced Anisotropic Light Spreading	135
5.3. Photoinduced Gyrotropy and Circular Dichroism	136
6. Photoinduced Anisotropy in Ion-Conducting Glass	136
6.1. Polarized Photodoping	136
6.2. Positive Birefringence and Anisotropic Surface Pattern	137
7. Applications	137
8. Summary	138
Acknowledgment	138
References	138

Chapter 5. PHOTONIC GLASSES: NONLINEAR OPTICAL AND SPECTRAL HOLE BURNING PROPERTIES

Masayuki Nogami, S. Tamil Selvan, Hongwei Song

1. Introduction	141
2. Nonlinear Optical Phenomena in Glasses	142
2.1. Fabrication of Metal Nanocluster-Doped Glasses	143
2.2. Fabrication of Semiconductor-Doped Glasses	150
3. Spectral Hole Burning and Its Application to Frequency-Domain Optical Storage	154
3.1. Introduction	154
3.2. Spectral Hole Burning and Frequency-Domain Optical Storage	155
3.3. Photon-Gated Hole Burning	155
3.4. High-Temperature Hole-Burning Materials	155
3.5. High-Temperature Hole-Burning Glasses	156
3.6. Thermal Stability of Hole Burning	157
3.7. Hole Burning of Eu^{3+} Ions Doped in Glasses	158
References	159

Chapter 6. STRUCTURE, CHEMISTRY, AND APPLICATIONS OF SOL-GEL DERIVED MATERIALS

Maryanne M. Collinson

1. Introduction	163
2. Introduction to Sol-Gel Chemistry	164
3. Characterization of Silicate Materials	167
3.1. Characterization of Structure	167
3.2. Characterization Using Probe Molecules	167
4. Analytical Applications	170
4.1. Chemical Sensors	170
4.2. Chromatographic Applications	180

4.3. Ion-Exchange Materials	181
4.4. Molecular Templating	182
4.5. Controlled-Porosity Materials	183
4.6. Materials for Optical Applications	184
5. Concluding Remarks	188
Acknowledgments	188
References	188

Chapter 7. SOL-GEL, MODIFIED SOL-GEL, AND METALLO-ORGANIC DECOMPOSITION TECHNIQUES FOR COMPLEX OXIDE FILMS: MATERIALS, PROCESSING, AND APPLICATIONS

M. Klee, H. van Hal, W. Keur, W. Brand, R. Kiewitt, U. Mackens, C. Metzmacher

1. Introduction	195
2. Sol-Gel, Modified Sol-Gel, and MOD Processes for Oxide Films	196
2.1. Sol-Gel Processing and Properties of Ta ₂ O ₅ and TiO ₂ Films	196
2.2. MOD Processing and Properties of RuO _x Thin Films	197
2.3. Processing of Undoped and Doped BaTiO ₃ , Ba _{1-x} Sr _x TiO ₃ , and SrTiO ₃ Thin Films	198
2.4. Processing of Undoped and Doped PbZr _x Ti _{1-x} O ₃ , PbTiO ₃ , and Pb(Mg, Nb)O ₃ -PbTiO ₃ Thin Films—Growth and Electrical Properties	200
2.5. Processing of Bi ₄ Ti ₃ O ₁₂ , SrBi ₂ Ta ₂ O ₉ , and SrBi ₂ NbTaO ₉ Thin Films	208
2.6. Sol-Gel Processing of K(Sr _{0.5} Ba _{0.5}) ₂ Nb ₅ O ₁₅ Thin Films	210
2.7. Processing of LiNbO ₃ Thin Films	210
3. Applications of Ferroelectric Thin Films	210
3.1. Miniaturized Thin Film Capacitors	210
3.2. Oxidic Thin Films for a Planar Integration of Capacitors, Resistors, and Inductors	211
3.3. Three-Dimensional Integration of Passive Components	212
3.4. Thin Film Capacitors in Integrated Circuits	214
3.5. Thin Film Tunable Capacitors	214
3.6. Ferroelectric Thin Films for Nonvolatile Memories	214
3.7. Perovskite Thin Films for High Density DRAMs	215
3.8. Piezoelectric and Pyroelectric Thin Films for Miniaturized and Integrated Devices	215
3.9. Ferroelectric Thin Films for Electro-Optic Applications	215
4. Conclusions	215
References	216

Chapter 8. SOL-GEL COATINGS FOR OPTICAL AND DIELECTRIC APPLICATIONS

M. R. Böhmer, A. R. Balkenende, T. N. M. Bernards, M. P. J. Peeters, M. J. van Bommel, E. P. Boonekamp, M. A. Verheijen, L. H. M. Krings, Z. A. E. P. Vroon

1. Introduction	220
2. Sol-Gel Chemistry of Tetraethylorthosilicate	222
2.1. Hydrolysis and Condensation Reactions	222
2.2. Hydrolysis-Gelation Time Curves	223
2.3. ²⁹ Si NMR	223
3. Dense TEOS Coatings	225
3.1. Differences between Bulk Gels and Coatings	225
3.2. Effect of Solvent Composition	226
4. Porous TEOS Coatings	228
4.1. Introduction	228
4.2. Aerogel Films	228
4.3. Xerogel Films	229
4.4. Methylation	229
4.5. Templating Sol-Gel Films	231

5. Hybrids	234
5.1. Introduction	234
5.2. Hydrolysis and Condensation of Hybrid Mixtures	235
5.3. Temperature Stability of Hybrid Materials	238
5.4. MTMS Coatings	238
5.5. Silica-Filled MTMS Layers	239
5.6. Porous Poly(silsesquioxane) Films	241
6. Applications	242
6.1. Colored Coatings	242
6.2. Dielectric and Optical Coatings	246
7. Vanadium Oxide Thin Films for Optical Applications	249
7.1. Introduction	249
7.2. Sol-Gel Preparation of Thermochromic VO ₂ Films	250
7.3. Optical Properties of VO ₂ Thin Films	252
8. Sol-Gel Chemistry for the Preparation of WO ₃	253
8.1. Introduction	253
8.2. WO ₃ from Tungsten Alkoxides	253
8.3. Electrochromic Properties of Sol-Gel Prepared WO ₃ Films	256
8.4. Photochromic Properties of WO ₃	257
8.5. Applications of Sol-Gel Prepared WO ₃	257
9. Concluding Remarks	258
References	259
Index	263
