Volume Listing	xxiii

Chapter 1. ELECTROCHEMICALLY SELF-ASSEMBLED ORDERED NANOSTRUCTURE ARRAYS: QUANTUM DOTS, DASHES, AND WIRES

S. Bandyopadhyay, A. E. Miller

1. Introduction	1
2. Fabricating Quantum Dots: Self-Assembly	2
3. Electrochemical Self-Assembly	2
3.1. Self-Assembling a Mask for Ordered Quantum Dot and Wire Arrays by <i>Electropolishing Aluminum</i>	3
3.2. Theory of Pattern Formation during Electropolishing	6
4. Quantum Dots Produced by Filling Nanopores in Anodic Alumina	18
4.1. Theory of Pore Formation	18
4.2. Filling the Pores by Electrodeposition	19
5. Characterization of Quantum Dots Self-Assembled by Pore Filling	20
5.1. Linear Optical Properties	20
5.2. Nonlinear Optical Properties	20
5.3. Nanomagnetic Properties	21
5.4. Electronic Bistability in Self-Assembled Quantum Dots and Its Circuit Applications	24
6. Conclusion	25
Appendix: Long-Wavelength Expansion of the Poisson Equation	25
Acknowledgments	25
References	26

Chapter 2. MECHANICAL SPECTROSCOPY OF NANOSTRUCTURED METALLIC SYSTEMS

Luca Pasquini

1. Introduction	29
2. Anelastic Relaxation Behavior	30
2.1. Basic Concepts	30
2.2. Rheological Models	31
2.3. Quasi-Static Response Functions	31
2.4. Dynamic Response Functions	32
2.5. Thermally Activated Relaxation Behavior	34
2.6. Relaxation Processes Involving a Distribution of Relaxation Times	34
2.7. Point Defects Relaxation	35
2.8. The Grain Boundary Relaxation	36
3. Experimental Mechanical Spectroscopy	37
3.1. Vibrating Reed	37
3.2. Torsion Pendulum	38
3.3. Dynamic Mechanical Analyzer	38
4. Synthesis and Properties of Nanostructured Materials	39
4.1. Classification of Nanostructured Materials	39
4.2. Synthesis Techniques	40
4.3. Properties	43

5.	Anelastic Phenomena in Nanostructured Materials	46
5.1.	Nanocrystalline Nickel	47
5.2.	Nanocrystalline Aluminum	50
5.3.	Granular CuCo Alloys	51
6.	Magnetomechanical Coupling: The ΔE Effect	53
6.1.	Theory of the ΔE Effect	53
6.2.	Internal Strains in Nanocrystalline Ni	54
6.3.	Application to the Finemet Alloy	55
	Acknowledgments	56
	References	56

Chapter 3. SOFT AMORPHOUS AND NANOCRYSTALLINE MAGNETIC MATERIALS

Frédéric Mazaleyrat, Richard Barrué

1.	Introduction	60
2.	History	60
3.	Rapid Solidification and Structure of Glassy Metals	61
3.1.	Glass Forming	61
3.2.	General Properties of Metallic Glasses	61
3.3.	Characterization	62
4.	Casting of Glassy Metals	63
4.1.	Production of Ribbons	63
4.2.	Production of Wires	63
4.3.	Production of Powders	64
4.4.	Production of Bulk Amorphous Alloys	64
5.	Properties of Metallic Glasses	64
5.1.	Electrical Properties	64
5.2.	Thermal Properties	65
5.3.	Mechanical Properties	66
5.4.	Magnetization and Curie Temperature	66
5.5.	Other Magnetic Properties	67
5.6.	Influence of Thermal Treatments on Ribbon-Shape Ferromagnets	69
5.7.	Properties of Amorphous Wires	73
5.8.	Some Peculiarities of the Bulk Amorphous Alloys	74
6.	Processing of Nanocrystalline Materials	75
6.1.	Nanocrystallization from Amorphous Precursor	75
6.2.	Nanocrystalline Materials Made from Nanopowders	78
6.3.	Nanopowders Made from Ball Milling	80
7.	Properties of Nanocrystalline Materials	80
7.1.	General Physical Properties of Nanocrystalline Materials	80
7.2.	Influence of the Chemical Composition on the Magnetic Properties	83
7.3.	Annealing Temperature Dependence of Magnetic Properties	84
8.	Magnetic Dynamic Properties	86
8.1.	Complex Permeability	86
8.2.	Magnetic Losses	88
9.	Thermal Dependence of Magnetic Properties	91
9.1.	Thermal Stability	91
9.2.	Saturation Polarization	91
9.3.	Some Peculiarities of Thermal Behavior of Two-Phase Nanocrystalline Materials	93
10.	Electronics and EMC Applications	93
10.1.	Choosing a Specific Nanocrystalline or Amorphous Core	93
10.2.	Passive Current Probe	94
10.3.	Common Mode Radio Frequency Interference (RFI) Choke	94
10.4.	Switch Mode Power Supplies (SMPS)	94
10.5.	Flux Gate Sensors	95
11.	Conclusion and Future Prospects	96
11.1.	Prospect in Metallic Glasses	96
11.2.	New Devitrified Nanocrystalline Alloys	96

11.3. Powder Cores Based on Nanostructured Materials	96
11.4. Conclusion	96
Appendix A	96
Appendix B	98
Appendix C	99
References	101

Chapter 4. NANOPOROUS MATERIALS FOR OPTICAL APPLICATIONS: MICROLASERS AND MICRORESONATORS

F. Laeri, J. U. Nöckel

1. Introduction	104
2. The Concept of Modes of the Electromagnetic Field and Its Quantization	105
2.1. The Dynamics of the Classical Field	105
2.2. Discretizing Fields—Random Fields	105
2.3. The Classical Hamiltonian of the Source-Free Field	106
2.4. Canonical Quantization of the Electromagnetic Field	108
2.5. Creation and Annihilation Operators	108
2.6. States of the Optical Field	109
3. Fluorescence in Free Space	113
3.1. Two-Level System and Its Variables	113
3.2. Interaction of a Two-Level System with a Classical Electromagnetic Field	116
3.3. Interaction of a Two-Level System with a Quantum Field	118
3.4. The Fermi Golden Rule	119
3.5. The Weisskopf–Wigner Theory	120
3.6. Reservoir Theory and Master Equation	121
4. Spontaneous Emission in an Optical Resonator	123
4.1. Master Equation of a Two-Level System in a Resonator	123
4.2. Bad Cavity Limit (Weak Coupling)	124
4.3. Good Cavity Limit (Strong Coupling)	125
5. Stimulated Emission in an Optical Resonator and Thresholdless Lasing	126
6. The Mode Structure of Microresonators	127
6.1. The Concept of Dielectric Constant, Dielectric Interfaces	127
6.2. Fields at Dielectric Interfaces	128
6.3. Scattering Resonances versus Cavity Modes in the Dielectric Cylinder	128
6.4. Quasibound States in Lasing and Fluorescence	133
6.5. Paraxial Approximation and the Parabolic Equation	134
6.6. Gaussian Beams in Free Space	135
6.7. Gauss–Hermite Beams	136
6.8. Resonator Modes in the Parabolic Equation Approximation	136
6.9. Monodromy Matrix	137
6.10. Round-Trip Stability of Periodic Orbits	138
6.11. Eigenvalues of the Monodromy Matrix	138
6.12. Resonator Eigenfrequencies in the Parabolic Approximation	139
6.13. Polygonal Resonators	139
7. Actual Realizations of Microlasers Based on Molecular-Sieve-Dye Compounds	141
7.1. Molecular-Sieve Crystals as Host Material for Microlasers	141
7.2. Microresonator Structure	144
7.3. Laser Properties	146
7.4. Photostability	148
8. Conclusion	149
Acknowledgments	149
References	149

Chapter 5. NANOPOROUS MATERIALS FOR OPTICAL APPLICATIONS

J. Sauer, F. Marlow, F. Schüth

1. Introduction	153
2. Porous Materials	155
2.1. Microporous Materials—Zeolites and Related Materials	155

2.2. Ordered Mesoporous Materials	156
2.3. Incorporation of Guests in Porous Matrices	157
2.4. Integration in Devices	158
3. Phosphors	159
3.1. Silver and Mercury	160
3.2. Cerium	160
3.3. Europium	160
3.4. Terbium	161
4. Gas Sensitive Materials	162
4.1. Nanoparticle-Based Sensors	162
4.2. Dye-Based Sensors	163
5. Nonlinear Optical Materials	163
5.1. Wavelength Conversion	163
5.2. High Density Data Storage	166
6. Optical Microswitches	167
6.1. Photochemical Transformations as a Functional Principle	167
6.2. Photochemical Transformations Used as a Switch	168
6.3. Incorporation of Switchable Dyes	169
7. Optical Amplifying Materials	169
8. Outlook	170
References	171

Chapter 6. OPTICAL PROPERTIES AND IMPURITY STATES IN NANOSTRUCTURED MATERIALS

Raúl Riera, José L. Marín, Rodrigo A. Rosas

1. Introduction	174
2. Optical Properties of Semiconductor Nanostructures	175
2.1. Absorption (One-Electron Approximation) in Nanostructures	175
2.2. Absorption: A Simplified Description of Excitonic Effects	182
2.3. Photoluminescence	186
2.4. Optical Properties in Semiconductor Quantum-Well Wire	194
2.5. Optical Properties in Semiconductor Spherical Quantum Dots	199
3. Optical Properties in Nanostructures II	208
3.1. Model and Applied Theory	209
3.2. Electron Raman Scattering in Quantum Well	210
3.3. Electron Raman Scattering in Quantum Dots	213
3.4. Electron Raman Scattering in Cylindrical Quantum-Well Wires	219
3.5. One Phonon-Assisted Electron Raman Scattering in Quantum-Well Wire, Free Standing Wire, and Quantum Dot	222
4. Physical Effects of Impurity States and Atomic Systems Confined in Semiconductor Nanostructures	235
4.1. Hydrogenic Impurity in Quasi-Two-Dimensional Systems	235
4.2. Hydrogenic Impurities within Asymmetric and Symmetric Quantum-Well Wires	239
4.3. Asymmetric Confinement of Hydrogen by Hard Spherical and Cylindrical Surfaces	242
4.4. Confined Electron and Hydrogenic Donor States in a Spherical Quantum Dot	244
4.5. Shallow Donors in a Quantum-Well Wire: Electric Field and Geometrical Effects	249
4.6. Hydrogenic Impurities in a Spherical Quantum Dot in the Presence of a Magnetic Field	251
4.7. Two-Electron Atomic Systems Confined within Spheroidal Boxes	254
4.8. Quantum Systems within Penetrable Spheroidal Boxes	259
4.9. Confinement of One- and Two-Electron Atomic Systems by Spherical Penetrable Boxes	260
4.10. Optical Properties of Impurity States in Semiconductor Quantum Dots	264

5. Nonconventional and Idealized Confined Systems and Geometrical Effects in Nanostructured Materials	267
5.1. Ground State Energy of the Two-Dimensional Hydrogen Atom Confined within Conical Curves	267
5.2. Geometrical Effects on the Ground State Energy of Hydrogenic Impurities in Quantum Dots	272
5.3. A Harmonic Oscillator Confined within an Infinite Potential Well	275
5.4. Hydrogen Atom and Harmonic Oscillator Confined by Impenetrable Spherical Boxes	277
5.5. Sublevels and Excitons in GaAs-Ga _{1-x} Al _x As Parabolic-Quantum-Well Structures	279
5.6. Energy States of Two Electrons in a Parabolic Quantum Dot in Magnetic Field	282
References	286

Chapter 7. CONFINED SYSTEMS AND NANOSTRUCTURED MATERIALS

José L. Marín, Raúl Riera, Rodrigo A. Rosas

1. Introduction	292
1.1. Definition of Confined Systems and Nanostructured Materials	292
1.2. Classification of the Confined Systems	292
2. Electronic States of the Idealized Confined Systems	293
2.1. Single Heterostructure	293
2.2. Double Heterostructure or Single Quantum Well	293
2.3. The Symmetric Double Square Well, Tunnel Coupling between Well	297
2.4. Superlattices	298
2.5. Quasi-One-Dimensional Systems	301
2.6. Quasi-Zero-Dimensional Systems	303
2.7. Idealized Confined Systems when Symmetry of the Confinement Region Has no Regular Form and the Schrödinger Equation is Nonseparable	304
3. Methods of Synthesis and Fabrication of Nanostructured Materials	305
3.1. Molecular Beam Epitaxy	305
3.2. Metal-Organic Chemical Vapor Deposition	306
3.3. Lithography	306
3.4. Nanocrystals in Inorganic Matrices	308
4. Quasi-Particle States in the Low-Dimensional Structures	310
4.1. The Envelope Function Approximation	311
4.2. Envelope Function Description of Quasi-Particle States for Nanostructured Systems	313
4.3. The Excitonic States in Semiconductor Nanostructures	317
4.4. Band Structure on Realistic Nanostructures	328
5. Effect of Static External Electric and Magnetic Fields on the Quasi-Particle Energy Levels in the Low-Dimensional Systems	333
5.1. The Stark Effect in Quasi-Two-Dimensional Structures	333
5.2. The Effects of Electric Field on Quasi-Zero-Dimensional System	336
5.3. Effect of Static External Magnetic Field on the Quasi-Particle Energy Levels in the Low-Dimensional Structures	340
6. Dynamics of the Lattice in Nanostructured Systems, Phonons and Electron-Phonon Interaction	351
6.1. Lattice Oscillations	352
6.2. Concept of Phonons	352
6.3. The Phenomenological Models for Long-Wavelength Polar Optical Modes in Nanostructured Systems	354
6.4. Normal Modes Confined in Quantum-Well Wires and Quantum Dots	355
6.5. Analysis of the Phenomenological Models for Long-Wavelength Polar Optical Modes in a Semiconductor Layered System	358
6.6. Polaron Properties in a Semiconductor Nanostructure	362
7. Theory of Quantum Transport in Nanostructures	367
7.1. Introduction	367
7.2. Electrical Conductivity in the Free Directions of Quasi-Two-Dimensional Electron Gas	368

7.3.	Quantum Transport in the Confinement Direction in a Quasi-Two-Dimensional System, Vertical Transport	385
7.4.	Magnetoconductivity of a Quasi-Two-Dimensional Electron Gas	387
7.5.	Magnetic Field Dependence of σ_{xy} : The Quantized Hall Effect	389
7.6.	Dielectric Formalism for a Quasi-One-Dimensional Electron Gas, Quantum Transport Equations	392
7.7.	Dielectric Functions and Potential Correlators	398
7.8.	Magnetoconductivity of Quantum-Well Wires with Elastic and Inelastic Scattering	403
	References	412
	Index	417
