Chapter 1. CALCULATIONS OF DYNAMIC HYPERPOLARIZABILITIES FOR SMALL AND MEDIUM-SIZED MOLECULES

David M. Bishop, Patrick Norman

1. Introduction	1
2. Definitions and Units	2
3. Separation of Hyperpolarizabilities into Electronic and Vibrational Contributions	6
4. Calibration Quality Calculations	7
5. Electronic Dynamic Hyperpolarizabilities	9
6. Vibrational Hyperpolarizabilities and Zero-Point Vibrational Averaging	12
7. Remarks on the Condensed Phase	18
8. Summary	20
Acknowledgments	20
Appendix: A Survey of Electronic (Dynamic) and Vibrational Calculations for First and Second Hyperpolarizabilities	20
References	59

Chapter 2. THEORETICAL APPROACH TO THE DESIGN OF ORGANIC MOLECULAR AND POLYMERIC NONLINEAR OPTICAL MATERIALS

Benoît Champagne, Bernard Kirtman

1. Introduction	63
2. Methodologies	65
2.1. Separation of Electronic and Vibrational Responses	66
2.2. Methods for Determining Electronic Polarizabilities and Hyperpolarizabilities	68
2.3. The Electron Correlation Problem: Wavefunction versus Density Functional Theory Approaches	72
2.4. Conventional Perturbation Approach for (Pure) Vibrational Hyperpolarizabilities	74
2.5. Nuclear Relaxation-Finite Field Approach to Vibrational Hyperpolarizabilities	75
2.6. Numerical Procedures and Basis Set Aspects	77
3. Applications	80
3.1. General Considerations	80
3.2. Second-Order NLO Organic Materials	83
3.3. Third-Order NLO Organic Materials	98
3.4. Role of the Medium	114
Acknowledgments	119
References	119

Chapter 3. DESIGN AND CHARACTERIZATION OF ORGANIC AND ORGANOMETALLIC MOLECULES FOR SECOND ORDER NONLINEAR OPTICS

*Etienne Goovaerts, Wim E. Wenseleers, M. Helena Garcia,
Graham H. Cross*

1. Introduction	128
1.1. Brief Overview of Nonlinear Optics	128
1.2. Second-Order Nonlinear Optics—Scope of This Review	128
1.3. General Description of Nonlinear Optics	129
1.4. Hyperpolarizability of Organic Conjugated Molecules	131
1.5. Theory and Modeling	132
2. Experimental Techniques	135
2.1. Kurtz Powder Second-Harmonic Generation	135
2.2. Solvatochromism	135
2.3. Electric Field Induced Second-Harmonic Generation	136
2.4. Hyper-Rayleigh Scattering	137
3. Organic Compounds	144
3.1. Push–Pull Systems	144
3.2. Octupolar Molecules	152
3.3. Alternative Approaches	159
4. Organometallic Compounds	159
4.1. Metallocenyl Derivatives	161
4.2. η^5 -Monocyclopentadienyl/ and Indenyl/Metal Derivatives	163
4.3. Metal–Carbonyl Complexes	165
4.4. Metal Complexes Possessing Only Metal–Ligand σ Bonds	170
4.5. Bimetallic Complexes	171
4.6. Octupolar Complexes	173
4.7. Concluding Remarks	174
5. Materials	174
5.1. Basic Classes of Second-Order Organic Materials	176
5.2. Polymers for Second-Order Nonlinear Optics	181
Acknowledgments	182
Appendix: Units and Conventions for NLO Parameters	182
Conversion to SI Units	182
Conventions	183
Unit Conversions	184
References	184

Chapter 4. PHOTONIC CRYSTALS: CRYSTAL GROWTH PROCESSING AND PHYSICAL PROPERTIES

*M. D. Aggarwal, W. S. Wang, K. Bhat, Benjamin G. Penn,
Donald O. Frazier*

1. Introduction	194
1.1. Nonlinear Optics with the Advent of Lasers	194
1.2. Photonics in the Information Age	194
1.3. Need for High-Quality Nonlinear Optical Single Crystals	194
2. Fundamental Theoretical Principles of Crystal Growth	194
2.1. Governing Equations and Dimensionless Parameters	195
2.2. Convective Flows in the Melt	196
3. Crystal Growth Methods and Processing Variables	197
3.1. Heating Methods	197
3.2. Temperature Control Techniques	198
3.3. Common Crucible Materials	199
4. Czochralski Crystal Pulling Technique	199
4.1. Automatic Diameter Control	199
4.2. Growth of Photorefractive Bismuth Silicon Oxide Crystals	201
4.3. Growth of Organic Nonlinear Optical Crystals	203
5. Inverted Vertical Gradient Freeze Method	205

6.	Bridgman–Stockbarger Crystal Growth Technique for Organic NLO Crystals	206
6.1.	Melt Growth System Using Two Immiscible Liquids	207
6.2.	Melt Growth System Using Two Separate Zones Separated by an Adiabatic Zone	208
6.3.	All-Glass System for Large Diameter Bulk Single Crystals	208
7.	Top-Seeded Solution Growth Technique	208
7.1.	Growth of Barium Titanate Crystals	208
7.2.	Growth of β -Barium Borate Crystals	210
8.	Solution Growth of Photonic Crystals at Low Temperatures	212
8.1.	Solubility and Supersaturation Measurements	212
8.2.	Selection of Solvents	213
8.3.	Temperature Lowering Method	213
8.4.	Evaporation Method	215
9.	Processing and Physical Properties	215
9.1.	Cutting and Polishing of $\text{Bi}_{12}\text{SiO}_{20}$ Crystals	215
9.2.	Nonlinear Optical Properties of Selected Crystal Materials	217
10.	Processing Superior Crystals in Microgravity	218
11.	Concluding Remarks	222
	Acknowledgments	223
	References	224

Chapter 5. HYPER-RAYLEIGH SCATTERING: OPPORTUNITIES FOR MOLECULAR, SUPRAMOLECULAR, AND DEVICE CHARACTERIZATION BY INCOHERENT SECOND-ORDER NONLINEAR LIGHT SCATTERING

Koen Clays, André Persoons

1.	Introduction to Nonlinear Optics	229
2.	Hyper-Rayleigh Scattering	231
2.1.	Basic Theoretical Concepts	232
2.2.	Generic Experimental Set-Up for Nanosecond Hyper-Rayleigh Scattering	233
2.3.	Experimental Variants of Nanosecond Hyper-Rayleigh Scattering	235
2.4.	Comparison with Electric-Field-Induced Second-Harmonic Generation	235
2.5.	Femtosecond Hyper-Rayleigh Scattering for Fluorescence Suppression	237
2.6.	HRS in Third-Order Nonlinear Optics	243
3.	First Hyperpolarizabilities of the First-Generation Materials:	
	Organic One-Dimensional Charge Transfer Molecules	243
3.1.	Para-Nitroaniline, the Fruit Fly, and Stilbenes, the Workhorses of Nonlinear Optics	243
3.2.	Biological Molecules	244
4.	First Hyperpolarizabilities of the Second-Generation Materials: Ionic, Octopolar, and Fluorescent Species	245
4.1.	Hyperpolarizabilities of Ionic Species	245
4.2.	Hyperpolarizabilities of Octopolar Species	246
4.3.	Hyperpolarizabilities of Fluorescent Species	248
5.	Supramolecular Structures, the Third-Generation Materials	251
5.1.	Nonlinearity by Intermolecular Charge Transfer	252
5.2.	Functionalized Flexible Polymers	252
5.3.	Functionalized Dendritic Polymers	252
5.4.	Bacteriorhodopsin	253
5.5.	Functionalized Rigid-Rod Polymers	255
5.6.	Binaphthylethers	256
6.	Spatial Correlations between Chromophores in Solid Samples	257
7.	Perspectives for Hyper-Rayleigh Scattering	262
	References	263

Chapter 6. NONLINEAR OPTICAL PROPERTIES OF FULLERENES AND CARBON NANOTUBES

Rui Hua Xie

1. Quantum Theory of Molecular Polarizability and Hyperpolarizability	267
1.1. Nonlinear Optical Interactions	267
1.2. Quantum Theory of Molecular Polarizability and Hyperpolarizability	269
2. Second-Order Optical Nonlinearities of Fullerene	272
2.1. Second-Order Optical Nonlinearity of C_{60}	272
2.2. Second-Order Optical Nonlinearity of C_{60} Derivatives	274
2.3. Second-Order Optical Nonlinearity of C_{70}	275
3. Third-Order Optical Nonlinearity of Fullerene	275
3.1. Background	275
3.2. Third-Order Optical Nonlinearity of C_{60}	276
3.3. Third-Order Optical Nonlinearity of Higher Fullerenes	278
4. Third-Order Optical Nonlinearities of Tubular Fullerene and Carbon Nanotubes	284
4.1. Structure of Fullerene and Carbon Nanotubes	284
4.2. Model of Fullerene and Carbon Nanotubes	286
4.3. Third-Order Optical Nonlinearity of Tubular Fullerenes	288
4.4. Third-Order Optical Nonlinearity of Chiral Carbon Nanotubes	291
5. Third-Order Optical Nonlinearity of Doped Fullerenes	293
5.1. Model of Doped Fullerenes	293
5.2. Third-Order Optical Nonlinearity of Doped Tubular Fullerenes	295
6. Coherent Control of Molecular Polarizability and Hyperpolarizability	297
7. Remarks	300
Appendix A: Details of Interference Terms	301
Acknowledgments	304
References	304

Chapter 7. THIRD-ORDER OPTICAL NONLINEARITY IN POLYDIACETYLENE WAVEGUIDES AT TELECOMMUNICATIONS WAVELENGTHS

A. Boyle, W. J. Blau

1. Introduction	309
2. Infrared Sources and Optical Waveguide Switching	310
2.1. Infrared Sources	310
2.2. Optical Fiber Waveguides	313
2.3. Characterization of Dispersion-Shifted Fiber	317
2.4. All-Optical Switching in Optical Fiber	319
3. Polydiacetylene: Materials and Waveguides	321
3.1. The Optical Properties of Polydiacetylenes	321
3.2. Dielectric Waveguides	323
3.3. Waveguide Fabrication	326
3.4. Loss in Polydiacetylene Waveguides	329
3.5. Conclusion	329
4. Nonlinear Absorption in Polydiacetylene Waveguides	330
4.1. Two-Photon Absorption	330
4.2. Two-Photon Absorption and Optical Switching	331
4.3. Results	333
5. Nonlinear Refraction in Polydiacetylene Waveguides	337
5.1. Measurement of n_2	337
5.2. Self-Phase Modulation	338
5.3. Interferometric Measurement of n_2 at $1.32 \mu\text{m}$	340
6. Conclusions	344
Acknowledgments	344
References	344

Chapter 8. ORGANIC MATERIALS FOR OPTICAL LIMITING

Satya Ram Mishra, S. C. Mehendale

1. Introduction	347
2. Limiting Mechanisms	348
2.1. Reverse Saturable Absorption	348
2.2. Multiphoton Absorption	350
2.3. Nonlinear Refraction	350
2.4. Nonlinear Scattering	351
3. Organic Materials for Optical Limiting	352
3.1. Buckminsterfullerene (C ₆₀)	352
3.2. Higher Fullerenes	355
3.3. Carbon Black Suspension	356
3.4. Porphyrins	356
3.5. Phthalocyanines	359
3.6. Liquid Crystals	361
3.7. Other Organics	361
4. Conclusion	363
Acknowledgments	364
List of Notations	364
References	364

Chapter 9. BRAGG GRATINGS IN OPTICAL FIBERS

Andreas Othonos, Kyriacos Kalli

1. Introduction	368
1.1. Fiber Bragg Gratings	368
1.2. Photosensitivity Background	369
2. Photosensitivity	369
2.1. Photosensitivity in Silicon-Based Optical Fibers	369
2.2. Point Defects in Germanosilicate Glass	372
2.3. Evidence for Compaction	376
2.4. Germanium-Doped Optical Fibers	377
2.5. Germanium-Free Optical Fibers	380
2.6. Photosensitivity Enhancement Techniques	380
2.7. Photosensitivity at Other Writing Wavelengths	383
2.8. Photosensitivity Mechanisms	385
2.9. Photosensitivity: Codopants and Other Fiber Types	391
2.10. Maintaining the Index Change	393
3. Fiber Bragg Grating Properties	393
3.1. Simple Bragg Grating	393
3.2. Reflectivity of a Uniform Bragg Grating	394
3.3. Phase and Group Delay of Uniform Gratings	394
3.4. Strain and Temperature Sensitivity of Bragg Gratings	395
3.5. Other Properties of Bragg Fiber Gratings	395
3.6. Types of Fiber Bragg Gratings	397
3.7. Photosensitivity Types of Fiber Bragg Gratings	398
3.8. Novel Bragg Grating Structures	400
3.9. Lifetime and Reliability of Fiber Bragg Gratings	401
3.10. Long Period Gratings	406
4. Inscribing Fiber Bragg Gratings	407
4.1. Internally Inscribed Bragg Gratings	407
4.2. Inscribing Bragg Gratings Interferometrically	408
4.3. The Phase-Mask Technique	410
4.4. Point-by-Point Writing	412
4.5. Mask Image Projection	413
4.6. Laser Sources	413
4.7. Special Fabrication Processing of Fiber Bragg Gratings	415
4.8. Hydrogenation	418
4.9. Fabrication of Bragg Grating Through Polymer Jacket	419

5. Theory of Fiber Bragg Gratings	419
5.1. Introduction	419
5.2. Coupled-Mode Theory	420
5.3. Two-Mode Coupling in Nonuniform Gratings	422
5.4. Tilted Gratings	425
5.5. Cladding-Mode Coupling	426
5.6. Radiation-Mode Coupling	427
5.7. Long-Period Gratings	427
5.8. Discussion	429
6. Applications of Fiber Bragg Gratings in Communications	429
6.1. Fiber Lasers	429
6.2. Fiber Amplifiers	433
6.3. Fiber Bragg Grating Laser Diodes	435
6.4. Basic Bandpass and Other Types of Fiber Bragg Filters	435
6.5. Wavelength-Division Multiplexers—Demultiplexers	438
6.6. Dense Wavelength-Division Multiplexing	441
6.7. Dispersion Compensation	441
6.8. Optical Fiber Phase Conjugator	442
6.9. Phased-Array Antenna Beam-Forming Control	442
6.10. Summary	442
7. Bragg Grating Sensors	442
7.1. Introduction	442
7.2. Sensing External Fields	443
7.3. Wavelength Demodulation of Bragg Grating Point Sensors	443
7.4. Multiplexing Techniques	452
7.5. Simultaneous Measurement of Temperature and Strain	455
7.6. Sensors Based on Chirped Bragg Gratings	458
7.7. Distinguishing Bragg Grating Strain Effects	460
7.8. Bragg Grating Fiber Laser Sensors	461
7.9. Bragg Gratings as Interferometric Sensors and Reflective Markers	463
7.10. Other Bragg Sensor Types	465
7.11. Applications of Bragg Grating Sensors	465
References	472
Index	481
