

Basic Calculations for Chemical and Biological Analysis

SECOND EDITION

Bassey J.S. Efiok, Ph.D.
Etim Effiong Eduok, Ph.D.

The Scientific Association Dedicated to Analytical Excellence®

Table of Contents

Preface	xi
Quick Reference to Abbreviations and Symbols	xiii
Quick Reference to SI Units	xiv
Quick Reference to Selected Equations	xv

Chapter 1 Reagent Quantitation: Calculating Amounts and Concentrations; Preparation Guidelines	1
1.1. Review of Basic Atomic and Molecular Concepts	1
A. Atomic Mass Unit	1
B. Mole	1
C. Avogadro's Number	2
D. Atomic Weight and Gram-Atomic Weight	2
E. Molecular Formula	2
F. Molecular Weight and Gram-Molecular Weight	2
G. Formula Weight	3
H. Dalton	3
I. Equivalent Weight	3
J. Equivalent	3
1.2. Calculating Concentrations Based on Mole and Equivalent	4
A. Molarity	4
B. Molality	5
C. Formality	5
D. Osmolarity	5
E. Normality	5
F. Molarity Related to Normality	6
1.3. Calculating Concentrations Based on Weight	6
A. Percent (Weight/Weight)	7
B. Percent (Weight/Volume)	7
C. Milligram Percent	7
D. Parts per Million (Weight/Weight)	8
E. Parts per Million (Weight/Volume)	8
F. Parts per Billion (Weight/Weight)	8
G. Parts per Billion (Weight/Volume)	8
H. Density and Specific Gravity	9
I. Specific Volume	9
1.4. Dilution Factor in Concentration and Volume Calculations	9
1.5. Preparing Reagents	10
1.6. Practical Examples	11

Chapter 2	Calculations Involving Chemical Reaction and Stoichiometry	27
2.1.	Principles of Chemical Stoichiometry	27
2.2.	Molar Mass and Percent Composition of Compounds	27
A.	Molar Mass	27
B.	Percent Composition	28
2.3.	Calculating the Empirical and Molecular Formulae of Compounds Using Molar Mass and Percent Composition Data	28
A.	Empirical versus Molecular Formulae	28
B.	Calculating Empirical Formula from Percent Composition and Molar Mass Data	28
C.	Calculating Molecular Formula from Empirical Formula and Molar Mass Data	29
2.4.	Calculations Involving Chemical Reactions	29
A.	Chemical Reactions	29
B.	Chemical Equations	29
C.	Balancing Chemical Equations	30
D.	Limiting Reactant	30
E.	Percent Yield	31
F.	Reaction Rate and Order	31
2.5.	Practical Examples	34
Chapter 3	Properties of Gases and Colligative Properties of Solutions	51
3.1.	Properties of Gases	51
A.	Principles	51
B.	Volume and Pressure	51
C.	Boyle's Law	51
D.	Charles' Law	52
E.	Gay-Lussac's Law	53
F.	The Combined Gas Law	53
G.	Avogadro's Law	54
H.	The Ideal Gas	54
I.	The Ideal Gas Law	54
J.	Standard Temperature, Pressure, and Molar Volume	55
K.	Dalton's Law of Partial Pressures	56
L.	Mole Fraction	56
3.2.	Colligative Properties of Solutions	57
A.	Principles	57
B.	Boiling Point Elevation	57
C.	Freezing Point Depression	57
D.	Osmotic Pressure; Principles and Applications	58
E.	Vapor Pressure	59
3.3.	Practical examples	59
Chapter 4	Buffers: Principles, Calculations, and Preparation	77
4.1.	Principles	77
A.	Definitions and Abbreviations	77

B. Properties of Acids and Bases	77
C. Mechanism of pH Buffering by Weak Acids and Bases	78
D. The Ionization of Water	79
E. Relationship Between K_a and K_b for Acid-Base Conjugate Pair	80
4.2. Buffer, pH, and pOH Calculations	81
A. The pH/pOH Scale	81
B. The Henderson-Hasselbach Equation	82
C. Buffer Capacity	83
4.3. Preparation of Buffers and Related Topics	85
A. Preparation of Buffers	85
B. Changes in Buffer pH upon Dilution	86
C. Polyprotic Weak Acids	86
4.4. Practical Examples	88

Chapter 5 Spectrophotometry: Basic Principles and Quantitative Applications 101

5.1. Principles and Techniques	101
5.2. Quantitative Aspects and Basic Applications	101
A. The Beer-Lambert Law	101
B. Calculating Concentrations	102
C. Quantifying Nucleic Acids	104
D. Identifying Substances	105
E. Characterizing Substances	105
5.3. Practical Examples	105

Chapter 6 Enzyme Assays and Activity 111

6.1. Introduction	111
6.2. Conditions Required for Quantitative Enzyme Assays	111
A. The Michaelis-Menton Equation as a Basis for Assay Conditions	111
B. Assays that Measure Enzyme Activity	112
C. Assays that Measure Substrate Concentration Using the Enzyme as a Reagent	113
6.3. Enzyme Activity and Units	115
A. Activity	115
B. Specific Activity	115
C. Enzyme Activity Units	115
6.4. Basic Kinetic Constants: K_{cat} , v_{max} , and K_m	116
A. Turnover Number	116
B. Maximal Velocity	117
C. Michaelis Constant	117
6.5. Practical Examples	118

Chapter 7 Radioactivity and Related Calculations 123

7.1. Introduction	123
7.2. Calculations Involving Radioactivity	123

A. Quantitative Description of Radioactive Decay	124
B. Units of Radioactivity	124
C. Specific Radioactivity and the Calculation of Concentrations	125
7.3. Practical Examples	125
Chapter 8 Analytical Calculations Using Spreadsheets and Reporting Results Into Laboratory Information Management Systems . .	131
8.1. Laboratory Automation	131
8.2. Analytical Calculations Using Spreadsheets	132
A. Symbols Used in Examples	132
B. Molecular Calculator	132
C. Reagent Preparation Guide	135
D. pH Titration Graph	136
E. Dilution Preparation Worksheet	138
F. Routine Calculation Template	141
G. Calibration Regression Analysis	143
8.3. Reporting Results into LIMS	150
8.4. Practical Examples	152
References	155
Appendices	157
A. Supplements to Text Materials	157
1. Derivation of the Ionization Constant of H_2O	157
2. Derivation of the Henderson-Hasselbach Equation	157
3. Derivation of the Beer-Lambert Equation	158
4. Spectrophotometers and Absorbance Measurement	159
5. Derivation of the Relationship Between $[S]$, $[S_0]$, and k for a First-Order Rate Reaction	162
6. Liquid Scintillation and Geiger-Müller Techniques for Radioactivity Measurements	163
B. Dealing with Numbers	165
1. Handling Exact and Experimental Numbers	165
2. Determining Significant Figures	166
3. Rounding Off Numbers	166
4. Significant Digits and Rounding in Calculated Values	166
5. Exponential (Scientific) Notations	167
6. Multiplying and Dividing Numbers in Exponential Notation	168
C. International System of Units (SI)	169
C1. Selected SI Units	169
C2. Prefixes for SI Units	170
C3. Conversion Factors for Gram Units	170
C4. Conversion Factors for Liter Units	170
C5. Conversion Factors for Meter Units	171
C6. Conversion Factors for Mole-Related Units	171
D. Commercial Concentrated Acids and Bases	173
D1. Concentrations	173

D2. Volumes Needed to Prepare Dilute Solutions	173
E. pK_a and pK_b Values of Common Weak Acids and Bases	175
E1. pK_a Values of Common Weak Acids	175
E2. pK_b Values of Common Weak Bases	176
E3. pH Values of Common Liquids	176
F. Useful Data for Nucleic Acids	177
G. Symbols, Molecular Weight, and pK_a Values of α -Amino Acids	179
H. Recipe for Preparing Common Laboratory Buffers	181
H1. Phosphate Buffer	181
H2. Tris-HCl Buffer	181
H3. Acetate Buffer	181
H4. Common Laboratory Buffers	185
I. Half Life of Selected Isotopes	187
J. Fractions of Radioactivity Remaining over Time	189
K. Atomic Weights of Selected Elements	191
L. Useful Constants and Values for Colligative Properties of Solutions	193
L1. Vapor Pressure of Water as a Function of Temperature	193
L2. Molal Boiling Point Elevation Constants (K_b) and Freezing Point Depression Constants (K_f) for Some Solvents	193
M. Description of Spreadsheet Contents	195
M1. Table of Cell Descriptions for Molecular Calculator Spreadsheet	195
M2. Table of Cell Descriptions for pH Titration Graph	195
M3. Table of Cell Descriptions for Dilution Preparation Worksheet	196
M4. Table of Cell Descriptions for Routine Calculation Template	196
M5. Table of Cell Descriptions for Calibration Regression Analysis	196
M6. MACRO Program Details for Section 8.2F, Figures 8.8 and 8.9	197

Index to Practical Examples	199
