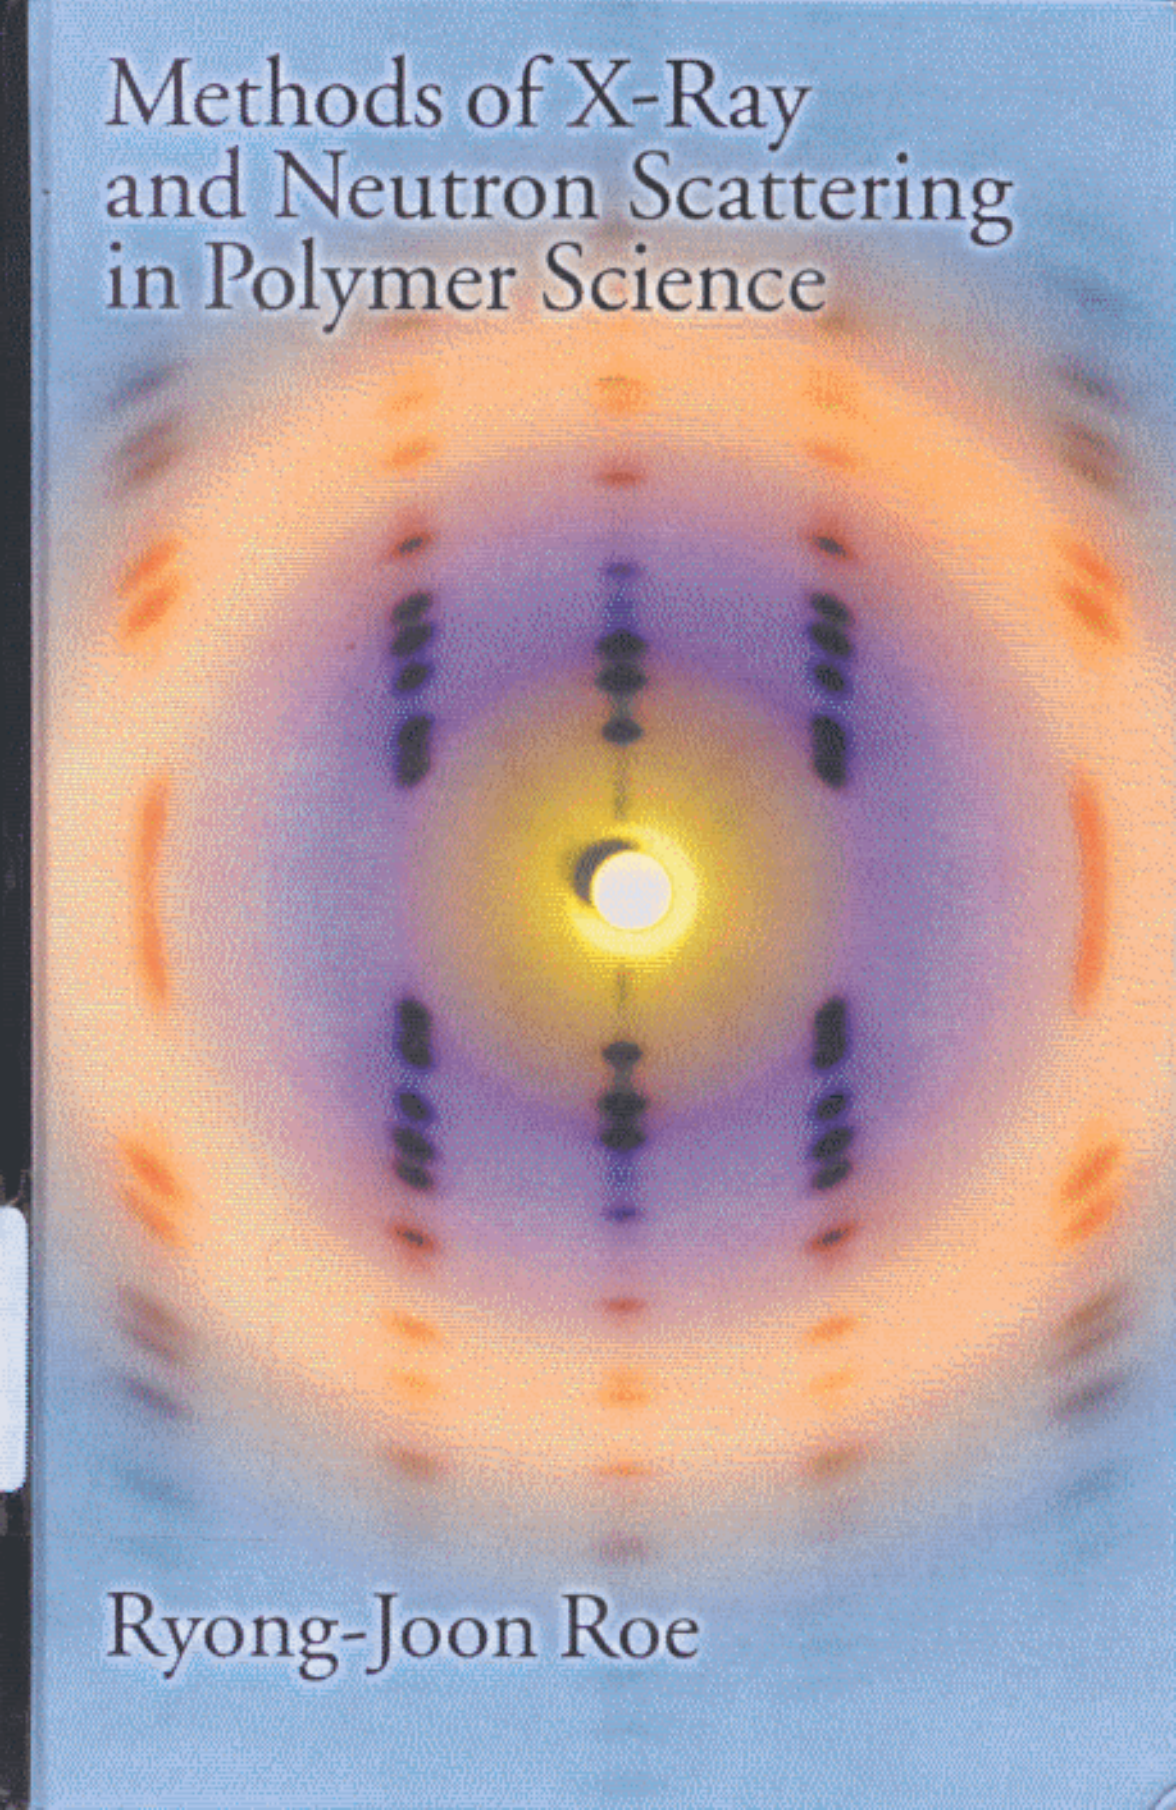
Methods of X-Ray and Neutron Scattering in Polymer Science



Ryong-Joon Roe

Contents

Preface xiii

1 Basics of X-Ray and Neutron Scattering *1*

1.1 Properties of X-Rays and Neutrons *1*
1.2 Scattering and Interference *4*
1.2.1 Flux, Scattering Cross Section, and Intensity *4*
1.2.2 Interference Calculation *6*
1.3 Scattering of X-Rays *10*
1.3.1 Classical Scattering from an Electron *10*
1.3.2 Electron Unit *12*
1.3.3 Atomic Scattering Factor *13*
1.3.4 Compton-Modified Scattering *15*
1.4 Scattering of Neutrons *17*
1.4.1 Scattering Length of a Single Nucleus *17*
1.4.2 Coherent and Incoherent Scattering Length *19*
1.5 Autocorrelation Function and Reciprocal Space *22*
1.5.1 A Note on Notations *22*
1.5.2 Autocorrelation Function *24*
1.5.3 Ewald Sphere and Reciprocal Space *26*
1.5.4 Invariant *28*
1.6 Scattering due to the Sample as a Whole *29*
1.7 Diffraction by Crystals *31*
1.7.1 Effect of Temperature *33*

Further Reading 34
References 35
Exercises 35

2 Experimental Techniques *37*

2.1 Radiation Source *37*
2.1.1 X-Ray *37*
2.1.1.1 X-Ray Tubes *37*
2.1.1.2 Spectrum of X-Rays Generated *39*
2.1.1.3 Synchrotron Radiation Source *40*
2.1.2 Neutron *45*
2.1.2.1 Nuclear Reactor *45*
2.1.2.2 Neutron Guide *46*
2.1.2.3 Pulsed Neutron Source *47*
2.2 Monochromatization *48*
2.2.1 Crystal Monochromator *48*
2.2.2 Neutron Velocity Selector *51*
2.3 Absorption *53*
2.3.1 Absorption Coefficient *53*
2.3.2 Wavelength Dependence *55*
2.3.3 Filters *55*
2.4 Detectors *57*
2.4.1 Proportional and Scintillation Counters *58*
2.4.1.1 Proportional Counter *58*
2.4.1.2 Scintillation Counter *59*
2.4.2 Position-Sensitive Detectors *60*
2.4.3 Counting Statistics *61*
2.4.4 Integrating Detectors *63*
2.5 Cameras and Diffractometers *65*
2.5.1 Collimation *66*
2.5.2 Focusing Geometry *69*
2.5.3 Diffractometer *71*
2.6 Multiple Scattering *74*
2.7 Absolute Intensity Calibration *77*

Further Reading 80
References 80

3 Crystalline Polymers *82*

3.1 Introduction *82*
3.2 Lattice Parameters *84*
3.2.1 Indexing *84*

3.2.2 Precision Measurement of Lattice Parameters *87*
3.2.3 Examples of Lattice Parameter Measurements with Polymers *88*
3.3 Crystal Structure Analysis *90*
3.3.1 Fourier Synthesis *90*
3.3.1.1 Effect of Symmetry *92*
3.3.1.2 Resolution of the Fourier Map *94*
3.3.2 Performing the Structure Analysis *95*
3.3.2.1 Patterson Function *95*
3.3.2.2 Methods of Phase-Angle Determination *97*
3.3.2.3 Structure Refinement *98*
3.3.3 Examples of Crystal Structure of Polymers *99*
3.4 Line Broadening and Crystal Imperfections *101*
3.4.1 Instrumental Broadening *102*
3.4.2 Small Crystal Size *102*
3.4.3 Crystal Imperfections *104*
3.4.4 Crystal Imperfection of the First Kind *108*
3.4.5 Crystal Imperfection of the Second Kind *110*
3.4.6 Summary *113*
3.5 Degree of Crystallinity *114*
3.5.1 Evaluation of the Degree of Crystallinity *115*
3.5.2 Ruland's Method *116*
3.5.3 A Method Based on Small-Angle Scattering *117*
3.6 Orientation *118*
3.6.1 Orientation Distribution of Plane-Normals (Poles) *118*
3.6.1.1 Uniaxial and Biaxial Orientation *118*
3.6.1.2 Methods of Measurement *120*
3.6.1.3 Pole Figure *122*
3.6.2 Orientation Parameters *123*
3.6.2.1 Hermans Orientation Parameter *123*
3.6.2.2 Biaxial Orientation Parameters *126*
3.6.3 Crystallite Orientation Distribution Function *128*

Further Reading 132
References 132

4 Amorphous Polymers *134*

4.1 Short-Range Order *134*
4.1.1 Pair Distribution Function: Cases with a Single Atomic Species *134*

4.1.2 Pair Distribution Function: Cases with More Than One Atomic Species *137*
4.1.3 Isotropic Polymers *140*
4.1.4 Uniaxially Oriented Polymers *145*
4.2 Thermal Density Fluctuation *147*

Further Reading 154
References 154

5 Small-Angle Scattering *155*

5.1 Model Structures Studied by Small-Angle Scattering *155*
5.2 Dilute Particulate System *157*
5.2.1 Radius of Gyration *158*
5.2.2 Independent Scattering from Particles of Simple Geometric Shape *160*
5.2.2.1 Sphere *160*
5.2.2.2 Thin Rod *161*
5.2.2.3 Thin Circular Disk *162*
5.2.2.4 Comparison of the Three Intensity Curves *162*
5.2.3 Independent Scattering from a Polymer Chain *162*
5.2.3.1 Gaussian Chain *162*
5.2.3.2 Worm-like Chain *164*
5.2.4 Guinier law *167*
5.2.4.1 Derivation of Guinier Law *168*
5.2.4.2 Samples Containing Nonidentical Particles *170*
5.2.5 Effect of Dense Packing *170*
5.3 Nonparticulate Two-Phase System *174*
5.3.1 Correlation Function and Invariant *174*
5.3.2 Ideal Two-Phase Model *176*
5.3.2.1 Invariant *177*
5.3.2.2 Porod Law *178*
5.3.2.3 Specific Interface Area and Length of Inhomogeneity *181*
5.3.3 Deviations from the Ideal Two-Phase Model *184*
5.3.3.1 Density Fluctuation within the Phases *184*
5.3.3.2 Diffuse Interface Boundary *185*
5.4 Fractal Objects *188*
5.4.1 Definitions *188*
5.4.2 Scattering from Fractal Objects *190*
5.4.2.1 Scattering from a Mass Fractal *190*
5.4.2.2 Scattering from a Surface Fractal *191*

5.5 Periodic System *193*
5.5.1 Scattering from Lamellar Structure *194*
5.5.1.1 Ideal Two-Phase Lamellar Structure *194*
5.5.1.2 Structure with Variable Lamella Thickness *196*
5.5.2 Correlation Function of Lamellar Structure *201*
5.6 Slit Collimation and Desmearing *204*
5.6.1 Slit Collimation *204*
5.6.2 Slit Desmearing *205*
5.6.3 Infinite Slit Approximation *206*

Further Reading 208

6 Polymer Blends, Block Copolymers, and Deuterium Labeling *210*

6.1 Polymer Blends *210*
6.1.1 Zero-Angle Scattering *210*
6.1.1.1 Dilute Polymer Solution *212*
6.1.1.2 Polymer Blend *212*
6.1.1.3 Flory–Huggins Free Energy of Mixing *215*
6.1.2 Finite-Angle Scattering *217*
6.1.2.1 Some General Relationships and Assumptions *218*
6.1.2.2 Dilute Polymer Solution *222*
6.1.2.3 Polymer Blend *223*
6.2 Block Copolymers *224*
6.3 Deuterium Labeling *228*
6.3.1 High Concentration Labeling *228*
6.3.2 Method of Contrast Variation *230*
6.3.3 Deuterium Isotope Effect *233*

Further Reading 235
References 235

7 Study of Surfaces and Interfaces *236*

7.1 Introduction *236*
7.2 Reflectivity *238*
7.2.1 Refractive Index *238*
7.2.2 Snell's Law and Fresnel's Law *240*
7.2.3 Reflectivity from a System with Two Parallel Interfaces *243*

7.2.4 Reflectivity from a Multilayer Film *245*
7.3 The Approximate Method *248*
7.3.1 Reflectivity under the Kinematic Approximation *249*
7.3.2 Comparison with Exact Results *251*
7.3.3 Diffuse and Rough Interfaces *253*
7.3.3.1 Diffuse Interface *253*
7.3.3.2 Coherence Length and Rough Interface *255*
7.4 Examples of Experimental Studies *256*

Further Reading 259
References 259

8 Inelastic Neutron Scattering *261*

8.1 Theory of Inelastic Scattering *261*
8.1.1 Inelastic Scattering Cross Section *263*
8.1.2 van Hove Correlation Function *264*
8.1.3 Coherent and Incoherent Scattering *266*
8.2 Simple Models of Motions *269*
8.2.1 Translational Diffusion *269*
8.2.2 Rotation *270*
8.2.3 Vibration *274*
8.2.4 Combination of Different Kinds of Motions *277*
8.3 Spectrometers *278*
8.3.1 Triple-Axis Spectrometer *279*
8.3.2 Time-of-Flight Spectrometer *279*
8.3.3 Back-Scattering Spectrometer *280*
8.3.4 Spin-Echo Spectrometer *281*
8.4 Examples of Experimental Studies *284*

Further Reading 290

Appendix A. Refresher on Complex Numbers *291*

Appendix B. Fourier Transform *293*
B.1 Definitions *293*
B.1.1 Fourier Transform *293*
B.1.2 Cosine and Sine Transforms *294*
B.2 Properties of Fourier Transform *294*
B.2.1 Addition *294*

B.2.2 Shift *295*
B.2.3 Scaling *296*
B.2.4 Differentiation *296*
B.3 Convolution *297*
B.3.1 Definition *297*
B.3.2 Convolution Theorem *299*
B.3.3 Derivative *299*
B.4 Delta Function *300*
B.4.1 Definition *300*
B.4.2 Multiplication by $\delta(x)$ *300*
B.4.3 Convolution with $\delta(x)$ *301*
B.4.4 Fourier Transform of $\delta(x)$ *301*
B.4.5 Lattice Function $z(x)$ *301*
B.5 Three-Dimensional Fourier Transform *302*

Further Reading 304
Exercises 305

Appendix C. Reciprocal Lattice *307*
C.1 Definition *307*
C.2 Fourier Transform Relationship *308*
C.3 Properties of the Reciprocal Lattice *311*
C.4 Rotating-Crystal Method and Fiber Diagram *312*

Reference 314
