

# HANDBOOK OF BIOSEPARATIONS

Edited by Satinder Ahuja

VOLUME 2

Series Editor **Satinder Ahuja**

SEPARATION SCIENCE AND TECHNOLOGY

# **CONTENTS**

**PREFACE** xiii

## **1 Bioseparations: An Overview**

S. AHUJA

- I. Introduction 1
- II. Analytical Methodologies 3
- III. Separation and Purification Methods 9
- IV. Other Important Considerations 18
- Reference 21

## **2 Analysis of Protein Impurities in Pharmaceuticals Derived from Recombinant DNA**

DONALD O. O'KEEFE

- I. Introduction 23
- II. Protein Impurity Analysis 28
- III. Experimental Summary 57

IV. Case Studies	58
References	64

### **3 Physicochemical Factors in Polypeptide and Protein Purification and Analysis by High-Performance Liquid Chromatographic Techniques: Current Status and Challenges for the Future**

MILTON T. W. HEARN

I. Introduction	72
II. Basic Chromatographic Terms and Concepts	76
III. The Chemical Structure of Polypeptides and Proteins	79
IV. Physicochemical Factors That Underpin Ligand Interactions with Polypeptides and Proteins in HPLC Separation Systems	84
V. Strategic Considerations behind the HPLC Separations	107
VI. Specific Physicochemical Considerations on the Individual Chromatographic Modes	117
VII. The Effect of Temperature and the Thermodynamics of Polypeptide- or Protein-Ligand Interactions	135
VIII. Factors That Control Performance and Efficiency	156
IX. Scaling-Up Possibilities: Heuristic Approaches and Productivity Considerations	172
X. Effect of Mass Transfer Resistances in Preparative HPLC of Polypeptides and Proteins	178
XI. Summary	218
References	222

### **4 Capillary Electrophoresis of Compounds of Biological Interest**

S. AHUJA

I. Introduction	238
II. Capillary Zone Electrophoresis	239
III. Migration Behavior of Peptides and Proteins	243
IV. Modifications of Fused Silica Capillaries	247
V. Effect of Temperature on Separations	252
VI. Strategy for Protein Separations	252
VII. Capillary Gel Electrophoresis	253
VIII. Micellar Electrokinetic Chromatography	255
IX. Capillary Electrochromatography	255
X. Applications	256
References	262

## **5 Isoelectric Focusing**

DAVID E. GARFIN

- I. Introduction 263
- II. The Principles of Isoelectric Focusing 264
- III. Analytical Isoelectric Focusing 276
- IV. Two-Dimensional Gel Electrophoresis 285
- V. Preparative Isoelectric Focusing 287
- VI. Capillary Isoelectric Focusing 291
- VII. Summary 292
- VIII. Appendix 292
- References 295

## **6 Mass Spectrometry of Biomolecules**

DAN GIBSON AND CATHERINE E. COSTELLO

- I. Introduction 299
- II. Examples of Applications of Mass Spectrometry to Biological Research 309
- III. Conclusions 325
- References 325

## **7 Liquid-Liquid Partitioning Methods for Bioseparations**

TINGYUE GU

- I. Introduction 329
- II. Solvent Extraction for Bioseparations 330
- III. Aqueous Two-Phase Partitioning for Bioseparations 348
- IV. Summary 360
- References 361

## **8 Separation of Nucleic Acids and Proteins**

ROHIT HARVE AND RAKESH BAJPAI

- I. Introduction 365
- II. Precipitation of Nucleic Acids 368
- III. Nuclease Treatment 370
- IV. Aqueous Two-Phase Extraction 370
- V. A Case Study 372
- VI. Conclusions 376
- References 376

## **9 Bioseparations by Displacement Chromatography**

ABHINAV A. SHUKLA AND STEVEN M. CRAMER

- I. Introduction 380
- II. Purification of Amino Acids and Peptides by Displacement Chromatography 382
- III. Purification of Proteins by Displacement Chromatography 383
- IV. Alternative Modes of Displacement Chromatography 390
- V. Methods Development for Displacement Chromatography 393
- VI. Displacement Chromatography for the Purification of Biomolecules: Industrial Case Studies 400
- VII. Design of Low Molecular Weight Displacers 406
- VIII. Conclusions 410
- References 412

## **10 Physicochemical Basis of Expanded-Bed Adsorption for Protein Purification**

B. MATTIASSON AND M. P. NANDAKUMAR

- I. Introduction 417
- II. Typical Procedure to Operate an Expanded-Bed Chromatographic System 418
- III. Ligand Selection 423
- IV. Applications 424
- V. Conclusion 427
- References 428

## **11 Expanded-Bed Adsorption Process for Protein Capture**

JOSEPH SHILOACH AND ROBERT M. KENNEDY

- I. Introduction 431
- II. Principles of Expanded-Bed Operation 433
- III. Experimental Strategy 435
- IV. Instrumentation 437
- V. Matrices 438
- VI. Applications 438
- VII. Discussion and Conclusions 449
- References 450

## **12 Adsorptive Membranes for Bioseparations**

RANJIT R. DESHMUKH AND TIMOTHY N. WARNER

- I. Introduction 454
- II. Comparison of Membrane Chromatography to Traditional Chromatography 458

- III. Scale-Up of Chromatography Membranes 460
- IV. Applications of MA to Preparative Bioseparations 464
- V. Conclusions 470
- References 471

### **13 Simulated Moving-Bed Chromatography for Biomolecules**

R. M. NICOUD

- I. Introduction 475
- II. Basic Principle 476
- III. Operating Conditions 482
- IV. Main Applications and Developments 490
- V. Practical Application: Separation of Sugars 499
- VI. Conclusion 506
- References 508

### **14 Large-Scale Chromatographic Purification of Oligonucleotides**

RANJIT R. DESHMUKH, WILLIAM E. LEITCH II,  
YOGESH S. SANGHVI, AND DOUGLAS L. COLE

- I. Introduction 512
- II. General Purification Strategies for Oligonucleotides 516
- III. Large-Scale Purification of Therapeutic Oligonucleotides 519
- IV. Purification of Related Molecules—DNA Fragments, Plasmids, Ribozymes, and RNA 529
- V. Economics of Oligonucleotide Purification 530
- VI. Summary 531
- References 531

### **15 Separation of Antibodies by Liquid Chromatography**

EGISTO BOSCHETTI AND ALOIS JUNGBAUER

- I. Introduction 536
- II. Antibodies: An Overview 538
- III. Biological Starting Material 546
- IV. Prepurification 551
- V. Purification of Antibodies by Liquid Chromatography 556
- VI. Regulatory Considerations 612
- VII. General Conclusion on Antibody Separation Technologies 620
- References 621

## **16 Processing Plants and Equipment**

P. BOWLES

- I. Introduction 633
- II. Industries Using Bioseparations 634
- III. Process-Scale Bioseparations 636
- IV. Process-Scale Considerations 653
- V. Summary 656
- References 657

## **17 Engineering Process Control of Bioseparation Processes**

RANDEL M. PRICE AND AJIT SADANA

- I. Need for Process Control in Bioseparations 660
- II. Brief Overview of Current Control Methods 661
- III. Application Examples 662
- IV. Opportunities for Continuing Development 664
- References 664

## **18 Economics of Bioseparation Processes**

ANAND RAMAKRISHNAN AND AJIT SADANA

- I. Introduction 667
- II. Drugs Market and Sales 670
- III. Applications of Models and Flow Sheets in Bioseparation Economics 673
- References 684

## **19 Future Developments**

S. AHUJA

- I. Introduction 687
- II. The Partnership of Proteins and Nucleic Acids 690
- III. Biotech Drugs 690
- IV. Assuring Production and Purity 694
- V. Genomics 698
- VI. Lab on Chip 699
- VII. Recovery of Biological Products 700
- References 710

**INDEX 713**
