|  |            |
|--|------------|
| <i>Series Introduction</i>                                       | <i>iii</i> |
| <i>Preface</i>   | <i>v</i>   |
| <b>1 Distributed Generation versus Traditional Power Systems</b> | <b>1</b>   |
| 1.1 Introduction   | 1          |
| 1.2 Distributed versus Central Station Generation                | 2          |
| 1.3 Traditional Power Systems                                    | 12         |
| 1.4 T&D System Costs   | 23         |
| 1.5 Power from the Grid as a Target for DG                       | 31         |
| 1.6 Summary  | 34         |
| <b>2 Demand for Electric Power</b>                               | <b>35</b>  |
| 2.1 Introduction   | 35         |
| 2.2 Electric Power Is Bought for End Uses                        | 36         |
| 2.3 Load Curves and Load Curve Analysis                          | 40         |
| 2.4 Coincidence Behavior and Load Curves                         | 46         |
| 2.5 Measuring Load Curve Data Accurately                         | 59         |
| 2.6 Summary  | 64         |
| For Further Reading  | 64         |

|          |   |            |
|----------|---|------------|
| <b>3</b> | <b>Reliability and Reliability Evaluation</b>             | <b>65</b>  |
| 3.1      | Introduction  | 65         |
| 3.2      | Outages Cause Interruptions                               | 67         |
| 3.3      | Reliability Indices                                       | 72         |
| 3.4      | Reliability and Contingency Criteria for Planning         | 77         |
| 3.5      | Cost Is King  | 82         |
| 3.6      | Conclusion and Summary                                    | 94         |
|          | For Further Reading                                       | 94         |
| <b>4</b> | <b>Planning and the Planning Process</b>                  | <b>97</b>  |
| 4.1      | Introduction  | 97         |
| 4.2      | Planning: Finding the Best Alternative                    | 98         |
| 4.3      | Short- and Long-Range Planning                            | 103        |
| 4.4      | Different Decision-Making Philosophies                    | 108        |
| 4.5      | Conclusion  | 120        |
|          | For Further Reading                                       | 121        |
| <b>5</b> | <b>Cost and Economic Evaluation</b>                       | <b>123</b> |
| 5.1      | Introduction  | 123        |
| 5.2      | Costs   | 124        |
| 5.3      | Time Value of Money                                       | 127        |
| 5.4      | Decision Bases and Cost-Effectiveness Evaluation          | 144        |
| 5.5      | Conclusion  | 149        |
|          | References and Further Reading                            | 149        |
| <b>6</b> | <b>Reciprocating Piston Engine Distributed Generators</b> | <b>151</b> |
| 6.1      | Introduction  | 151        |
| 6.2      | Basics of Reciprocating Piston Engines                    | 155        |
| 6.3      | Important Design Characteristics                          | 159        |
| 6.4      | Conversion to Electric Power                              | 166        |
| 6.5      | Salient Aspects of Piston-DG Systems                      | 169        |
| 6.6      | Summary   | 174        |

|  |            |
|--|------------|
| <b>7 Gas Turbine Powered Distributed Generators</b>              | <b>175</b> |
| 7.1 Introduction   | 175        |
| 7.2 Three Types of Turbine DG: Utility, Mini- and Micro-Turbine  | 176        |
| 7.3 Basic Turbine Generator Concepts                             | 181        |
| 7.4 Utility System Turbine Generators                            | 193        |
| 7.5 Mini Gas Turbine Generators                                  | 195        |
| 7.6 Micro Gas Turbine Generators                                 | 195        |
| 7.7 Conclusion   | 201        |
| <b>8 Fuel Cell Powered Distributed Generators</b>                | <b>203</b> |
| 8.1 Introduction   | 203        |
| 8.2 Fuel Cells: Using Fossil Fuel Another Way                    | 204        |
| 8.3 Proton Exchange Membrane Fuel Cells                          | 214        |
| 8.4 Phosphoric Acid Fuel Cells                                   | 215        |
| 8.5 Molten Carbonate Fuel Cells                                  | 217        |
| 8.6 Solid Oxide Fuel Cells                                       | 218        |
| 8.7 Conclusion and Summary                                       | 220        |
| <b>9 Renewable Resource Distributed Generators</b>               | <b>221</b> |
| 9.1 Introduction   | 221        |
| 9.2 Solar Thermal Power Generation                               | 222        |
| 9.3 Photovoltaic (PV) Generation                                 | 245        |
| 9.4 Wind-Powered Generation                                      | 257        |
| 9.5 Other Renewable Generation Resources                         | 271        |
| 9.6 Summary  | 274        |
| References   | 274        |
| <b>10 Energy Storage for Use with Distributed Generation</b>     | <b>275</b> |
| 10.1 Introduction  | 275        |
| 10.2 Energy Storage Systems                                      | 280        |
| 10.3 Battery Storage   | 285        |
| 10.4 Superconducting Magnetic Energy Storage (SMES)              | 292        |
| 10.5 Capacitor Storage   | 295        |
| 10.6 Mechanical Storage: Flywheels, Pumped and Compressed Fluids | 298        |
| 10.7 Summary and Comparison of Energy Storage Technologies       | 301        |
| For Further Reading  | 302        |

|   |            |
|---|------------|
| <b>11 Distributed Generation Systems: Planning and Comparison</b> | <b>303</b> |
| 11.1 Introduction   | 303        |
| 11.2 Types of DG Planning Methods                                 | 306        |
| 11.3 Overview Comparison of Various Types of DG Systems           | 311        |
| 11.4 Projections of Future Fossil Fuel Costs                      | 314        |
| <b>12 Basic DG Case Examples: What to Include and How</b>         | <b>315</b> |
| 12.1 Introduction   | 315        |
| 12.2 DG Evaluation: Costs from Past, Present, and Future          | 316        |
| 12.3 Basic DG Cost Analysis                                       | 319        |
| 12.4 Cost Evaluation and Schedule of Demand                       | 322        |
| 12.5 Modeling Uncertain Costs                                     | 327        |
| 12.6 Evaluating DG Against What?                                  | 331        |
| 12.7 Size Matters   | 333        |
| 12.8 Sensitivity Studies on Key Factors                           | 337        |
| 12.9 Value-of-Attribute Studies                                   | 340        |
| 12.10 Summary and Key Points                                      | 343        |
| <b>13 Basic DG Cases: Modularity and Reliability and Cost</b>     | <b>345</b> |
| 13.1 Introduction   | 345        |
| 13.2 Modularity and Capacity Availability                         | 347        |
| 13.3 Capacity Availability vs. Cost                               | 352        |
| 13.4 Using Modularity to Handle Long-Term Load Growth             | 355        |
| 13.5 Summary and Key Points                                       | 359        |
| References  | 359        |
| <b>14 Basic DG Cases: Grid Interconnection Options</b>            | <b>361</b> |
| 14.1 Introduction   | 361        |
| 14.2 The Power Grid   | 363        |
| 14.3 Pros and Cons of DG-Grid Interconnection                     | 369        |
| 14.4 Example Case Study   | 374        |
| 14.4 What Type of DG-Grid Interconnection?                        | 380        |
| 14.6 Summary and Guidelines                                       | 384        |

|  |            |
|--|------------|
| <b>15 Basic DG Cases: Schedule and Operating Characteristics</b>     | <b>385</b> |
| 15.1 Introduction  | 385        |
| 15.2 Operating Schedule Impacts Fuel Efficiency                      | 386        |
| 15.3 Schedule Dynamics and Fuel Efficiency                           | 393        |
| 15.4 Non-Coincidence Load Behavior and Small DG Units                | 397        |
| 15.5 Summary and Guidelines  | 406        |
| <b>16 Basic DG Cases: Reliability, Maintenance, and Availability</b> | <b>409</b> |
| 16.1 Introduction  | 409        |
| 16.2 Simple Probability-of-Outage Reliability Analysis               | 410        |
| 16.3 Using Simulation to Provide More Detail                         | 422        |
| 16.4 Data on Service Reliability                                     | 435        |
| 16.5 Reliability of Combined DG and T&D Systems                      | 437        |
| 16.6 Summary and Guidelines  | 445        |
| For Further Reading  | 447        |
| <b>17 Basic DG Cases: Renewable Resource Generation</b>              | <b>449</b> |
| 17.1 Introduction  | 449        |
| 17.2 Screening, Statistical, or Simulation Studies                   | 451        |
| 17.3 Example: Temporal "Simulation" of a Renewable Resource          | 459        |
| 17.4 Study of DG Unit and Storage Sizes                              | 465        |
| 17.5 Example: Monte Carlo Analysis of Generation                     | 473        |
| 17.6 Summary and Key Points  | 479        |
| <b>18 Detailed DG Case and Sensitivity Study</b>                     | <b>481</b> |
| 18.1 Comparing Different Types-of DG Options                         | 480        |
| 18.2 The Goal: Service to a Remote Mountain Community                | 481        |
| 18.3 Electric Service Alternative 1: Service from the Utility Grid   | 484        |
| 18.4 Alternative 2: DG Using Natural Gas Delivered by Pipeline       | 486        |
| 18.5 Alternative 3: DG Using Diesel Delivered by Truck               | 487        |
| 18.6 Alternative 4: Small Dispersed Generation Using Natural Gas     | 489        |
| 18.7 Alternative 5: Renewable Energy – Solar Thermal Power           | 491        |
| 18.8 Alternative 6: Renewable Energy – Dispersed Photovoltaic        | 500        |
| 18.9 Cost and Reliability Comparison of Alternatives                 | 502        |
| 18.10 Sensitivity Studies of "What Wins Under What Conditions"       | 504        |
| 18.11 Summary and Key Points   | 518        |

|  |            |

| <b>19 Business Factors and Their Influence on DG Value</b>         | <b>521</b> |
| 19.1 Introduction  | 521        |
| 19.2 The Standard Engineering Economics Evaluation                 | 522        |
| 19.3 Business and Financing Factors                                | 528        |
| 19.4 Summary and Final Comments                                    | 536        |
| <b>20 Objectivity and Bias in DG Planning and Evaluation</b>       | <b>539</b> |
| 20.1 Introduction  | 539        |
| 20.2 Sources of Bias   | 541        |
| 20.3 Three Rules Used to Bias Planning Studies in an Unseen Manner | 545        |
| 20.4 Four Areas Where Bias Is Often Introduced Into a Study        | 547        |
| 20.5 Creating a Bias in Favor of Just One Alternative              | 557        |
| 20.6 Bias Applied to Distort Absolute Claims                       | 571        |
| 20.7 Concluding Remarks  | 572        |
| References   | 574        |
| <b>21 Recommendations and Guidelines for DG Planners</b>           | <b>575</b> |
| 21.1 Introduction  | 575        |
| 21.2 When and Where Does DG Have an Advantage?                     | 575        |
| 21.3 Twelve Recommendations for Effective DG Evaluation            | 580        |
| 21.4 Summary   | 589        |
| <i>Index</i>   | 589        |
