

# Ion Channels and Disease

Frances M. Ashcroft

ACADEMIC PRESS

PREFACE    xix

Chapter	<b>1</b>	<b>INTRODUCTION</b>	<b>1</b>
Chapter	<b>2</b>	<b>FROM GENE TO PROTEIN</b>	<b>3</b>
		The Structure of the Eukaryotic Gene	3
		DNA Is Transcribed into RNA	3
		mRNA Processing	5
		The Genetic Code	6
		RNA Is Translated into Protein	-7
		Protein Structure	8
		<i>Basic Genetics</i>	12
		Chromosome Structure	12
		Chromosomal Modifications	15
		Genetics of Disease	16
		Mutations May Cause Defective Ion Channels by Different Mechanisms	18
Chapter	<b>3</b>	<b>HOW CHANNELS WORK</b>	<b>21</b>
		<i>Properties of Single-Channel Currents</i>	21
		Permeation	22
		Gating	28
		<i>From Single Channels to Macroscopic Currents</i>	33
		The Macroscopic Current	33
		The Membrane Current	35
		<i>From Whole-Cell Currents to Membrane Potential     Changes</i>	37
		The Passive Response	37
		Action Potentials	38
		The Synaptic Potential	39

Chapter	<b>4</b>	<b>STUDYING ION CHANNELS</b>	<b>43</b>
		<i>Investigating Ion Channel Function</i>	43
		Potential Measurements	43
		Voltage Clamp	44
		Patch Clamp	46
		Patch Clamp Configurations	47
		Noise Analysis	49
		Methods for Studying Intracellular Ion Channels	51
		<i>Obtaining the Primary Sequence</i>	51
		A Plethora of Enzymes	51
		Cloning of Ion Channels	54
		Functional Expression of Cloned Channels	55
		Tissue Distribution	57
		<i>Investigating Ion Channel Structure</i>	57
		Topology	57
		Mutational Analysis	59
		<i>Genetic Analysis of Ion Channels and Disease</i>	60
		Chromosomal Location	60
		Positional Cloning	61
		Genetically Engineered Animals	64
Chapter	<b>5</b>	<b>VOLTAGE-GATED Na<sup>+</sup> CHANNELS</b>	<b>67</b>
		Basic Na <sup>+</sup> Channel Properties	67
		Subunit Composition	68
		Structure	69
		Correlating Na <sup>+</sup> Channel Structure and Function	71
		<i>Diseases of Muscle Na<sup>+</sup> Channels</i>	79
		Hyperkalaemic Periodic Paralysis, Paramyotonia Congenita and Potassium-Aggravated Myotonia	79
		Equine Periodic Paralysis	89
		Long QT Syndrome	89
		<i>Diseases of Neuronal Na<sup>+</sup> Channels</i>	95
		Generalized Epilepsy with Febrile Seizures	95
		Motor Endplate Disease of Mice	96

Chapter	<b>6</b>	<b>VOLTAGE-GATED K<sup>+</sup> CHANNELS</b>	<b>97</b>
		<i>K<sub>V</sub> Channels</i>	97
		K <sub>V</sub> Channel Structure	98
		Correlating Structure and Function	103
		<i>K<sub>V</sub> Channels and Disease</i>	109
		Episodic Ataxia Type-1	109
		<i>KCNQ Channels</i>	111
		Structure	111
		<i>KCNQ Channels and Disease</i>	113
		Long QT Syndrome	113
		Benign Familial Neonatal Epilepsy	116
		<i>Eag-Like K<sub>V</sub> Channels</i>	117
		Structure and Functional Properties	117
		HERG Constitutes Part of the Cardiac I <sub>Kr</sub> Channel	119
		<i>Eag-like K<sub>V</sub> Channels and Disease</i>	120
		HERG and LQT2	120
		Mutations	121
		How Do Mutations in <i>KCNQ1</i> or <i>HERG</i> Cause <i>Torsade de Pointes</i> ?	121
		I <sub>Kr</sub> and I <sub>Ks</sub> Are Involved in Acquired LQT Syndrome	122
Chapter	<b>7</b>	<b>Ca<sup>2+</sup>-ACTIVATED K<sup>+</sup> CHANNELS</b>	<b>125</b>
		<i>Maxi K<sub>Ca</sub> (BK) Channels</i>	127
		<i>Small K<sub>Ca</sub> Channels</i>	130
		<i>Myotonic Muscular Dystrophy</i>	132
		<i>Intermediate K<sub>Ca</sub> Channels</i>	133
Chapter	<b>8</b>	<b>INWARDLY RECTIFYING K<sup>+</sup> CHANNELS</b>	<b>135</b>
		Structure of Kir Channels	136
		Chromosomal Location	140
		Correlating Structure and Function	141
		<i>Diseases Associated with Kir Channels</i>	149
		Bartter's Syndrome (Kir1.1)	149
		Weaver Mouse (Kir3.2)	152

Diseases of Insulin Secretion	155
Familial Persistent Hyperinsulinaemic Hypoglycaemia of Infancy (PHHI)	156
Diabetes Mellitus	158

Chapter 9 **VOLTAGE-GATED  $\text{Ca}^{2+}$   
CHANNELS** 161

Basic $\text{Ca}^{2+}$ Channel Properties	161
Modulation	164
Functional Roles	164
$\text{Ca}^{2+}$ Channel Structure	164
Correlating Structure and Function	167
<i>Diseases of Skeletal Muscle <math>\text{Ca}^{2+}</math> Channels</i>	172
Muscular Dysgenesis in Mice	172
Hypokalaemic Periodic Paralysis	174
Malignant Hyperthermia	176
Summary	177
<i>Diseases of Neuronal Calcium Channels</i>	177
Familial Hemiplegic Migraine	178
Episodic Ataxia Type-2	178
Spinocerebellar Ataxia Type-6	179
The Tottering Mouse	180
Conclusions on <i>CACNL1A4</i> Mutations	181
<i>Drosophila</i> Mutants	181
Mutations in Voltage-Gated $\text{Ca}^{2+}$ Channel $\beta$ - and $\gamma$ -Subunits also Cause Disease	181
Polycystic Kidney Disease: A Disease of $\text{Ca}^{2+}$ Channels?	182

Chapter 10 **VOLTAGE-GATED  $\text{Cl}^-$   
CHANNELS** 185

Structure	185
Correlating Structure and Function	187
<i><math>\text{Cl}^-</math> Channel Diseases</i>	190
Myotonia Congenita and Generalised Myotonia	190
Nephrolithiasis, A Disease of CLC-5	195
Bartter's Syndrome Type III: A Disease of CLC-Kb	196

<i>Chapter</i>	<b>11</b>	<b>CYCLIC NUCLEOTIDE- GATED CHANNELS</b>	<b>199</b>
		<i>Cyclic Nucleotide-Gated Channels</i>	199
		Structure	199
		Chromosomal Location and Tissue Distribution	201
		Correlating Structure and Function	202
		Physiological Roles of CNG Channels	205
		<i>CNG Channel Mutations Associated with Disease</i>	207
		Retinitis Pigmentosa	207
		<i>C. elegans</i> Mutants	208
		<i>Hyperpolarization-Activated Cyclic-Nucleotide- Gated Channels</i>	208
<i>Chapter</i>	<b>12</b>	<b>CYSTIC FIBROSIS TRANSMEMBRANE CONDUCTANCE REGULATOR</b>	<b>211</b>
		Structure of CFTR	212
		Functions of CFTR	213
		Correlating Structure and Function	215
		<i>Cystic Fibrosis</i>	218
		Clinical Features	218
		Mutation Analysis	218
		How Do Mutations in CFTR Cause Cystic Fibrosis?	222
		Gene Therapy	228
		Geographic and Ethnic Variations	228
<i>Chapter</i>	<b>13</b>	<b>EPITHELIAL Na<sup>+</sup> CHANNEL</b>	<b>231</b>
		Basic Properties	231
		Structure	232
		ENaC Belongs to a Family of Related Ion Channels with Diverse Functions	234
		Chromosomal Location	235
		Regulation of ENaC Expression	236
		Regulation of ENaC Activity	236
		Correlating Structure and Function	237
		<i>Diseases Associated with ENaC Channels</i>	238
		Disease of Blood Pressure Regulation	238

Liddle's Syndrome	240
Pseudohypoaldosteronism Type-1	243
Respiratory Distress in the Newborn	244
Cystic Fibrosis	246
Neuronal Degeneration	247

## Chapter 14 LIGAND-GATED $\text{Ca}^{2+}$ CHANNELS 249

<i>Ryanodine Receptors</i>	249
Structure	250
Functional Roles	251
Properties	254
Pharmacology	256
Proteins Associated with RyR Channels	256
<i>Diseases Associated with Ryanodine Receptors</i>	257
Malignant Hyperthermia	257
Central Core Disease	259
Dyspedic Mice	259
<i>IP<sub>3</sub> Receptors</i>	260
Basic Properties	261
Cloning of the IP <sub>3</sub> Receptor	263
Structure	263
<i>Diseases Associated with IP<sub>3</sub> Receptors</i>	264
The <i>Opisthotonos</i> Mouse	265
Manic Depression and Li <sup>+</sup> Treatment	265
Lowe's Oculocerebrorenal Syndrome	266

## Chapter 15 ACETYLCHOLINE RECEPTORS 269

Basic Properties	269
Structure	273
Postsynaptic Localization	275
Correlating Structure and Function	276
<i>Diseases of Skeletal Muscle AChRs</i>	283
Slow Channel Syndrome	283
Fast Channel Syndrome	287
<i>Diseases of Neuronal AChR</i>	288
Nocturnal Frontal Lobe Epilepsy	288

Neuronal Degeneration in <i>C. elegans</i>	289
Nicotine Abuse	289

## Chapter 16 GLUTAMATE RECEPTORS 291

<i>Non-NMDA Receptors</i>	291
Basic Properties	291
Structure	292
Functional Diversity	294
Correlating Structure and Function	300
<i>NMDA Receptors</i>	301
Basic Properties	301
Structure	303
Correlating Structure and Function	304
<i>Glutamate Channels and Disease</i>	306
Ingestion of Natural Excitotoxins	307
Ischaemic Neuronal Death	308
Excitotoxicity and Neurodegeneration	309

## Chapter 17 GLYCINE RECEPTORS 313

Basic Properties	313
Structure	313
Expression	313
Correlating Structure and Function	316
<i>Glycine Receptors and Disease</i>	319
Startle Disease	319
Mice Mutants	322
Cattle and Horses	324

## Chapter 18 GABA<sub>A</sub> RECEPTORS 325

Basic Properties	325
Pharmacology	326
Structure	327
Chromosomal Location	329
Correlating Structure and Function	330
<i>Diseases Associated with GABA<sub>A</sub> Channels</i>	332
Angelman Syndrome	332
The $\gamma 2$ Knockout Mouse	333
Alcohol Intolerance in the Rat	334
Resistance to Insecticides	336

<i>Chapter</i>	<b>19</b>	<b>WATER CHANNELS</b>	<b>337</b>
		Aquaporin 1	337
		Aquaporin 2	341
		Other Aquaporins	344
		Aquaporins Belong to the MIP Superfamily	345
<i>Chapter</i>	<b>20</b>	<b>GAP JUNCTION CHANNELS</b>	<b>347</b>
		Structure	347
		Gap Junctions Are Heterogenous	350
		Studying Gap Junction Channels	352
		Regulation of Gap Junction Channels	353
		Chromosomal Location	353
		<i>Diseases of Gap Junction Channels</i>	354
		Charcot-Marie-Tooth Disease (Cx32)	354
		Cardiac Malformations (Cx43)	357
		Non-Syndromic Deafness (Cx26)	358
		Infertility in Mice (Cx37)	358
		Summary	359
<i>Chapter</i>	<b>21</b>	<b>ANTIBODIES TO ION CHANNELS</b>	<b>361</b>
		<i>Basic Immunology</i>	361
		<i>Autoantibodies Affecting Neuromuscular Transmission</i>	363
		Myasthenia Gravis	364
		Lambert-Eaton Myasthenic Syndrome	369
		Amyotrophic Lateral Sclerosis	372
		Acquired Neuromyotonia	373
		<i>Autoantibodies to Ion Channels Not Involved in Neuromuscular Transmission</i>	375
		Rasmussen's Encephalitis	375
		Cardiomyopathy	375
		Type-1 Diabetes Mellitus	376
		Stiff-Man Syndrome	377
<i>Chapter</i>	<b>22</b>	<b>ION CHANNELS IN VIRUSES</b>	<b>379</b>
		<i>Influenza Virus</i>	379
		Structure of the M2 Channel	380

How Does the M2 Channel Influence Viral Replication?	381
Drug Therapy	383
<i>Other Types of Viruses</i>	383

Chapter **23 ION CHANNELS AS  
LETHAL AGENTS 385**

<i>Ion Channels of the Vertebrate Immune System</i>	385
Complement	385
Perforins	388
Defensins	390
Magainins	391
<i>Ion Channels of Bacteria, Fungi and Protozoans</i>	391
Bacterial Ion Channels	391
Fungal Ion Channels	399
Protozoan Ion Channels	401
<i>Venoms</i>	403

Chapter **24 A RAGBAG OF CHANNELS 405**

<i>ATP-Gated Ion Channels</i>	405
Structure	405
Functional Roles	406
Correlating Structure and Function	407
<i>Vanilloid Receptors</i>	407
<i>Channels Involved in Programmed Cell Death</i>	410
$\beta$ -Amyloid Peptide	411

A LAST WORD	413
BIBLIOGRAPHY	419
INDEX	465
