

**THERMAL
DESIGN
of
ELECTRONIC
EQUIPMENT**

Ralph Remsburg

Contents

Chapter 1

Introduction to Thermal Design of Electronic Equipment.....	1
1.1 Introduction to the Modes of Heat Transfer in Electronic Equipment.....	1
1.1.1 Convection.....	1
1.1.2 Conduction.....	2
1.1.3 Radiation.....	3
1.1.4 Practical Thermal Resistances.....	4
1.2 Theoretical Power Dissipation in Electronic Components.....	6
1.2.1 Theoretical Power Dissipation.....	6
1.2.2 Heat Generation in Active Devices.....	7
1.2.2.1 CMOS Devices.....	7
1.2.2.2 Junction FET.....	7
1.2.2.3 Power MOSFET.....	8
1.2.3 Heat Generated in Passive Devices.....	9
1.2.3.1 Interconnects.....	9
1.2.3.2 Resistors.....	11
1.2.3.3 Capacitors.....	11
1.2.3.4 Inductors and Transformers.....	12
1.3 Thermal Engineering Software for Personal Computers.....	13
1.3.1 Commercial CFD Codes.....	15
1.3.2 Flotherm v2.2.....	16
References.....	16

Chapter 2

Formulas for Conductive Heat Transfer.....	19
2.1 Conduction in Electronic Equipment: Introduction.....	19
2.2 Thermal Conductivity.....	20
2.2.1 Thermal Resistances.....	20
2.2.2 Conductivity in Solids.....	21
2.2.3 Conductivity in Fluids.....	21
2.3 Conduction—Steady State.....	21
2.3.1 Conduction in Simple Geometries.....	21
2.3.1.1 Conduction through a Plane Wall.....	22
2.3.1.2 Conduction through Cylinders and Spheres.....	27
2.3.1.3 Plane Wall with Heat Generation.....	30
2.3.1.4 Cylinders and Spheres with Heat Generation.....	31
2.3.1.5 Critical Radius of a Cylinder.....	36

2.3.2	Conduction in Complex Geometries	42
2.3.2.1	Multidimensional Analytic Method.....	47
2.3.2.2	Multidimensional Graphical Method	49
2.3.2.3	Multidimensional Shape Factor Method	50
2.3.2.4	Finite Difference Method	53
2.3.2.5	Resistance-Capacitance Networks.....	55
2.4	Conduction—Transient.....	57
2.4.1	Lumped Capacitance Method.....	60
2.4.2	Application of the Lumped Capacitance Method.....	63
2.5	Conduction in Extended Surfaces	64
2.5.1	Fin Efficiency.....	65
2.5.2	Fin Optimization.....	69
2.5.3	Fin Surface Efficiency	72
2.6	Thermal Contact Resistance in Electronic Equipment Interfaces.....	73
2.6.1	Simplified Contact Resistance Model	73
2.6.2	Geometry of Contacting Surfaces	74
2.6.3	Contact Resistance in a Typical Application	75
2.7	Discrete Heat Sources and Thermal Spreading	77
	References.....	82

Chapter 3

	Fluid Dynamics for Electronic Equipment	85
3.1	Introduction.....	85
3.2	Hydrodynamic Properties of Fluids	85
3.2.1	Compressibility	85
3.2.2	Viscosity.....	86
3.2.3	Surface Tension.....	88
3.3	Fluid Statics	89
3.3.1	Relationship of Pressure, Density, and Height	89
3.4	Fluid Dynamics.....	91
3.4.1	Streamlines and Flowfields.....	91
3.4.2	One-, Two-, and Three-Dimensional Flowfields.....	92
3.5	Incompressible Ideal Fluid Flow	93
3.5.1	One-Dimensional Flow.....	94
3.5.1.1	One-Dimensional Euler Equation	94
3.5.1.2	One-Dimensional Bernoulli Equation	95
3.5.1.3	Application of the One-Dimensional Equations	95
3.5.2	Two-Dimensional Flow	96
3.5.2.1	Application of the Two-Dimensional Equations	96
3.6	Incompressible Real Fluid Flow	99
3.6.1	Laminar Flow.....	99
3.6.2	Turbulence and the Reynolds Number.....	104

3.6.3	Boundary Layer Theory	115
3.6.4	Turbulent Flow.....	120
3.7	Loss Coefficients and Dynamic Drag	122
3.7.1	Expansions	122
3.7.2	Contractions	124
3.7.3	Tube Bends	134
3.7.4	Manifolds	137
3.7.5	Screens, Grills, and Perforated Plates	142
3.7.6	Rough Surface Conduits.....	144
3.8	Jets	150
3.9	Fans and Pumps.....	173
3.9.1	Fans.....	175
3.9.1.1	Fan Operation at Nonstandard Densities	179
3.9.2	Pumps.....	179
3.10	Electronic Chassis Flow	180
	References.....	182

Chapter 4

	Convection Heat Transfer in Electronic Equipment.....	189
4.1	Introduction.....	189
4.2	Fluid Properties.....	189
4.2.1	Properties of Air	190
4.3	Boundary Layer Theory	191
4.4	Dimensionless Groups.....	194
4.5	Forced Convection.....	202
4.5.1	Forced Convection Laminar Flow.....	207
4.5.1.1	Forced Convection Laminar Flow in Tubes.....	208
4.5.2	Forced Convection Turbulent Flow.....	209
4.5.2.1	Forced Convection Turbulent Flow in Tubes.....	210
4.5.2.2	Forced Convection Flow through Noncircular Tube Geometries.....	212
4.5.2.3	Forced Convection Flow through Tubes with Internal Fins.....	213
4.5.3	Forced Convection External Flow.....	216
4.5.3.1	Laminar Forced Convection along Flat Plates.....	217
4.5.3.2	Turbulent Forced Convection along Flat Plates.....	219
4.5.3.3	Mixed Boundary Layer Forced Convection along Flat Plates	220
4.5.3.4	Forced Convection Flow over Cylinders.....	220
4.5.3.5	Forced Convection Flow over Spheres	227
4.5.4	Forced Convection Flow over Complex Bodies.....	230
4.5.4.1	Forced Convection Flow along a Populated Circuit Board	230
4.5.4.2	Forced Convection Flow through Pin-Fin Arrays.....	234
4.5.5	Jet Impingement Forced Convection.....	242

4.6	Natural Convection	245
4.6.1	Natural Convection Flow along Flat Plates	247
4.6.2	Natural Convection Cooling Using Vertical Fins	251
4.6.3	Natural Convection along Nonvertical Surfaces	255
4.6.4	Natural Convection in Sealed Enclosures	260
4.6.5	Natural Convection in Complex Geometries	265
4.6.5.1	Natural Convection across Horizontal Cylinders.....	265
4.6.5.2	Natural Convection along Vertical Cylinders.....	267
4.6.5.3	Natural Convection across Spheres	268
4.6.5.4	Natural Convection across Cones.....	269
4.6.5.5	Natural Convection across Horizontal Corrugated Plates.....	270
4.6.5.6	Natural Convection across Arbitrary Shapes	270
4.6.5.7	Natural Convection through U-Shaped Channels	271
4.6.5.8	Natural Convection through Pin-Fin Arrays	272
	References.....	274

Chapter 5

	Radiation Heat Transfer in Electronic Equipment.....	279
5.1	Introduction.....	279
5.1.1	The Electromagnetic Spectrum	279
5.2	Radiation Equations.....	280
5.2.1	Stefan-Boltzmann Law	282
5.3	Surface Characteristics	283
5.3.1	Emittance	285
5.3.1.1	Emittance Factor.....	288
5.3.1.2	Emittance from Extended Surfaces.....	288
5.3.2	Absorptance	292
5.3.3	Reflectance.....	293
5.3.3.1	Specular Reflectance.....	294
5.3.4	Transmittance.....	294
5.4	View Factors	294
5.4.1	Calculation of Estimated Diffuse View Factors.....	296
5.5	Environmental Effects	303
5.5.1	Solar Radiation	303
5.5.2	Atmospheric Radiation	304
	References.....	305

Chapter 6

	Heat Transfer with Phase Change.....	307
6.1	Introduction.....	307
6.1.1	Definitions of Phase Change Parameters	308
6.2	Dimensionless Parameters in Boiling and Condensation	309
6.3	Modes of Boiling Liquids	310

6.3.1	Bubble Phenomenon.....	311
6.3.2	Pool Boiling.....	315
6.3.2.1	Pool Boiling Curve.....	316
6.3.2.2	Pool Boiling Correlations.....	318
6.3.2.3	Pool Boiling Critical Heat Flux Correlations.....	320
6.3.2.4	Pool Boiling Minimum Heat Flux Correlations.....	324
6.3.2.5	Pool Boiling Vapor Film Correlations.....	324
6.3.3	Flow Boiling.....	325
6.3.3.1	External Forced Convection Boiling.....	326
6.3.3.2	Internal Forced Convection Boiling.....	327
6.4	Evaporation.....	329
6.5	Condensation.....	334
6.6	Melting and Freezing.....	338
	References.....	339

Chapter 7

	Combined Modes of Heat Transfer for Electronic Equipment.....	343
7.1	Introduction.....	343
7.2	Conduction in Series and in Parallel.....	343
7.3	Conduction and Convection in Series.....	346
7.4	Radiation and Convection in Parallel.....	348
7.5	Overall Heat Transfer Coefficient.....	348
