

POWER QUALITY PRIMER

Covers all aspects of power quality including standards, economics, measurements, simulation, and customer service

Based on the author's numerous seminars preparing the power utilities for deregulation

Preface xv

Chapter 1 Introduction	1
Power Quality Definition	4
Need for Power Quality	5
Sensitive Loads	7
Nonlinear Loads	10
Interconnected Power Systems	13
Deregulation	15
Who's Involved In the Power Quality Industry?	17
Research and Development Organizations	18
Standards Organizations	19
Consultants	19
End-User Equipment Manufacturers	20
Monitoring-Equipment Manufacturers	21
Power Conditioning Equipment Manufacturers	22
Utilities	22
End Users	22
Lawyers	23
How Much Does Power Quality Cost?	24
How to Use This Book	24
References	25
Chapter 2 Power Quality Characteristics	27
Power Quality Theory	31
Types of Power Quality Problems	33
Voltage Sags (Dips)	34
Voltage Swells	36
Long-Duration Overvoltages	37
Undervoltages	38
Interruptions	39
Transients	40
Voltage Unbalance	41
Voltage Fluctuations	42
Harmonics	43
Electrical Noise	49
Sources of Power Quality Problems	50
Utility Side of the Meter	51

End-User Side of the Meter	52
Effects of Power Quality Problems	64
Power Quality Problem-Solving Procedures	65
Power Quality Solutions	65
Summary	65
References	65
Chapter 3 Power Quality Standards	67
Power Quality Standards Organizations	68
Institute of Electrical and Electronics Engineers (IEEE)	68
American National Standards Institute (ANSI)	69
International Electrotechnical Commission (IEC)	69
Other Domestic Standards Organizations	70
Other International Standards Organizations	71
Purpose of Power Quality Standards	71
Types of Power Quality Standards	73
Voltage Sag (Dip) Standards	75
Transients or Surges	78
Voltage Unbalance	80
Voltage Fluctuation or Flicker Standards	82
Harmonic Standards	83
Transformer Overheating Standards	86
Neutral Conductor Loading Standards	88
Static Electricity	89
Telephone Power Quality Standards	90
Grounding and Wiring Standards	90
Sensitive Electronic Equipment Standards	90
Trends in Power Quality Standards	92
References	94
Chapter 4 Power Quality Solutions	97
Reduce Effects on Sensitive Equipment	97
Reduce or Eliminate Cause	98
Reduce or Eliminate Transfer Medium	101
Install Power Conditioning Equipment	102
How Does It Work?	104
Surge Suppressors	105
Noise Filters	110
Isolation Transformers	112
Line-Voltage Regulators	115
Motor-Generator Sets	119
Magnetic Synthesizers	120
Static VAR Compensators (SVCs)	121
Uninterruptible Power Supply (UPS)	122
Solid-State Switches	128
Harmonic Filters	129
Other Harmonic Solutions	131
Selection of Appropriate Power Conditioning Equipment	132
Grounding and Wiring Solutions	133
References	135

Chapter 5 Wiring and Grounding	137
Wiring Principles	137
Grounding Principles	140
Power System	141
Utility Power System Grounding	141
Telecommunication System Grounding	148
End-User Power System Grounding	148
Wiring and Grounding Problems	151
Ground Loops	151
Electromagnetic Interference (EMI) Noise	153
Loose Connections	154
Grounding for Lightning and Static Electricity	154
Attack of the Triplens	155
Solutions That Cause Problems	157
Wiring Solutions	159
Separation	159
Selection of Wire and Cables	160
Shielding	162
Grounding Solutions	163
Ground Rods	163
Ground Ring	165
Ground and Reference Signal Grids	166
Other Grounding Systems	167
Isolated Grounds	167
Multipoint Grounding	168
Separately Derived Source Grounding	169
Conclusions	170
References	170
Chapter 6 Power Quality Measurement Tools	173
Kilowatt-Hour Meter	175
Multimeters	178
Average-responding versus True RMS Meters	181
Crest Factor and Bandwidth	182
Other Selection Considerations	184
Oscilloscopes	185
Disturbance Analyzers	187
Harmonic Analyzers	189
Power Factor Measurement	189
Static Meters	190
Electric Field Strength and Magnetic Gaussmeters	191
Infrared Detectors	191
Flicker Meters	192
Wiring and Grounding Instruments	194
Receptacle Circuit Testers	194
Ground Circuit Impedance Testers	195
Earth Ground Testers	195
Permanent Power Quality Monitoring	196
Need for Power Quality Monitoring	197
Evolution of Power Quality Monitoring	199
Deregulation's Effect on Power Quality Monitoring	199
Power Quality Monitoring System	201
Monitoring and Analysis to Evaluate Compliance	204

Monitoring to Characterize System Performance	204
Monitoring to Characterize Specific Problems	204
Monitoring as Part of an Enhanced Power Quality Service	204
Summary	205
References	205

Chapter 7 Power Quality Surveys 207

Purpose of a Power Quality Survey (Checkup or Examination)	208
Assess the Power Quality (Health)	208
Identify the Power Quality Problem (Symptom)	211
Determine the Cause (Disease)	211
Analyze the Results of the Survey (Diagnose) to Determine a Solution (Cure)	211
Planning a Power Quality Survey	214
Identify the Participants and Performer of the Survey	215
Ask Questions	218
Coordinate the Parties	218
Know Facilities	219
Survey Forms	219
Choosing the Right Power Quality Instruments	220
Conducting a Power Quality Survey	224
Step 1: Collect Information at Coordination Meeting	224
Step 2: Conduct On-Site Visual Inspection	227
Step 3: Set Up Test Instruments	230
Step 4: Collect Test Measurements	232
Analyzing Power Quality Survey Results	232
Input Data Into Diagnostic Model	235
Identify Alternative Solutions	235
Preventing Power Quality Problems	236
References	237

Chapter 8 Power Quality Economics 239

Total Power Quality Improvement Cost	240
Steps in Performing an Economic Analysis	241
Step 1: Determine Base Power Quality Problem Cost	243
Value-Based Economic Analysis	244
Cost of the Disturbance	247
Interruptions	248
Voltage Sags	250
Weighting Factors for Interruptions and Voltage Sags	253
Harmonic Distortion	254
Flicker	254
Step 2: Determine Power Quality Improvement Cost	255
End-User Power Quality Improvements	256
Utility-Side Power Quality Improvements	260
Step 3: Determine Reduced Power Quality Problem Cost	260
Interruption and Voltage Sage Reduction Technologies	262
Benefit of Filters to Reduce or Eliminate Harmonics	262
Benefits of Reducing Flicker	262
Step 4: Determine Economic Analysis Method and Assumptions	262
Power Quality Improvement—Purchaser Perspective	265
Life Cycle	265
Time Value of Money	266
Equivalent First Cost	266

Present Worth Method	266
Benefit-to-Cost Method	267
Step 5: Perform Economic Analysis	268
Uncertainty	268
Sensitivity Analysis	268
Computer Programs	270
References	271

Chapter 9 Future Trends 273

United States Electric Utility Deregulation	274
United States Electric Power Industry	276
1992 Energy Policy Act	277
Unbundling	280
Requirements for Power Quality Contracts	290
Contracts between TRANSCO and DISTCO or Direct-Service Customer	290
Contracts between DISTCO and End Users (or End-User Representative)	292
Contracts between RETAILCO or ESCO and End User	293
Enhanced Power Quality Requirements to Improve Productivity	293
Contracts between DISTCO and Small IPP	294
Deregulation versus Regulation	294
Power Quality Standards	295
International Utility Competition	295
Research and Development	297
Power Quality Parks	299
